Reference to Prior Application.

(ORDER NO. 2,822.)

U. S. PATENT OFFICE, Washington, June 9, 1923.

Order No. 2,071 is hereby abrogated and order No. 2,010 reinstated and amended to read as follows:

(ORDER NO. 2,010.)

When an application is filed which in the opinion of the Examiner is a division of, a continuation of, or a substitute for a previously filed application, but which contains no reference in the specification to such prior application, the Examiner will require applicant to insert the proper reference to the prior application in the specification. If, when the case is otherwise in condition for allowance, this requirement has not been complied with, nor shown to have been improperly made, the proper reference to the prior application will be made by an Examiner's amendment, and the application passed to issue forthwith.

THOMAS E. ROBERTSON,

Commissioner.

Disclaimer.

1,307,812. John V. Errickson, Scranton, Pa. METHOD OF AND APPARATUS FOR MAKING PHONOGRAPH RECORDS. Patent dated June 24, 1919. Disclaimer filed June 6, 1923, by the assignee Columbia Graphophone Manufacturing Company.

Hereby enters this disclaimer to the claims in said specification, which are in the following words, to wit:

"7. The process of heating and cooling a die for hot plastic material which consists in passing heating and cooling fluids alternately and in multiple paths through

the die close to the surface along well defined lines of flow of relatively small cross-section at substantially uniform distances apart.

"8. The process of facilitating heating and cooling of a hot plastic material into disks which consists in supplying the heating and cooling fluids each concurrently through separate paths distributed at substantially uniform distances close to the surface of the material.

"9. The process of heating and cooling a flat die for handling hot plastic phonograph record material which consists in forming a plurality of circularly arranged channels close to each other and to the die surface for the passage of the fluids and supplying each of the fluids thereto concurrently.

"15. A phonograph die for pressing hot plastic material comprising a die body and channel disk interfitting therewith provided with a plurality of annular channels in one of the parts on their facing side and inlet and outlet fluid supply and discharge provision connecting with all of the channels.

"16. In a phonograph die, a die body and channel disk interfitting therewith one of the parts being annularly channeled concentrically and the other providing inlet and outlet passages both connecting therewith at different distances from the center.

"18. A disk die for pressing hot plastic material divided into two parts along a plane parallel to the face of the die, having circular spaced channels formed in the facing side of one of the parts, separate inlet and outlet fluid connections for said channels, and a fluid tight seal between the parts."

ADJUDICATED PATENTS.

(U. S. D. C. N. Y.) Leonard patent, 1,122,774, Held infringed. *H. Ward Leonard, Inc. v. Maxwell Motor Sales Co.*, 288 Fed. Rep., 62.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Court of Appeals of the District of Columbia.

IN RE CURTIS.

No. 1,490. Decided January 2, 1923.

PATENTABILITY—CHANGE OF MATERIAL.

Where a speed governor controlled by the flow of a fluid or pulverulent material through an aperture is old and it is known that, other things being equal, the size of the device would depend on the specific gravity of the fluid or other material, the use of mercury in such a device is not patentable where the only advantage claimed is that, due to the high specific gravity of mercury, a smaller governor may be used, since this is obvious from the common knowledge that mercury has a high specific gravity and from its common use in horology.

Mr. Paul Carpenter and *Mr. H. H. Benjamin* for Curtis.

Mr. T. A. Hostettler for the Commissioner of Patents.

Before SMYTH, Chief Justice, and ROBB and VAN ORSDER, Associate Justices.

ROBB, J.:

Appeal from a decision of the Patent Office rejecting five of the fourteen claims of appellant's application, those claims being the first four and the last. Claims 1 and 14 are here reproduced, as follows:

1. A chronometric regulating device, comprising in combination a source of power, a tubular member rotated thereby, and mercury within said member filling said member less than half its volume adapted to move under the action of gravity relatively to said member and in a direction opposite to the direction of rotation of said member, whereby the rotation of said member is checked with a force increasing with its speed of rotation, and substantially constant speed of rotation is obtained.

14. In an apparatus for regulating chronometrically the treatment of substances, a member adapted to hold the material to be treated, means for moving said member in one direction, a latch for holding said member after such movement a spring for moving said member in the opposite direction, and chronometric means for releasing said member from said latch after a predetermined period of time, said first-mentioned means being adapted to start said chronometric means simultaneously with the movement of said member.

In simple terms, this is a device for boiling eggs a predetermined length of time, with means for then lifting them from the water. The Examiner rejected the fourteen claims of the application, but on appeal the Examiners in Chief, after carefully considering the references, allowed nine of the claims. The Assistant Commissioner again reviewed the references and affirmed the decision of the Board.

An examination of the record fails to disclose error in the decision appealed from, and, since we can add nothing to the reasoning of the tribunals of the Patent Office, we affirm the decision without more.

Affirmed.

The decision of Assistant Commissioner MANN, rendered in this case December 18, 1920, reads as follows:

This is an appeal from the decision of the Examiners in Chief sustaining the Examiner in re-

jecting claims 1 to 5, inclusive, 10, and 14, of which 1 and 14 will serve as examples:

1. A chronometric regulating device comprising in combination, a source of power, a tubular member rotated thereby, and mercury within said member filling said member less than half its volume adapted to move under the action of gravity relatively to said member and in a direction opposite to the direction of rotation of said member, whereby the rotation of said member is checked with a force increasing with its speed of rotation, and substantially constant speed of rotation is obtained.

14. In an apparatus for regulating chronometrically the treatment of substances, a member adapted to hold the material to be treated, means for moving said member in one direction, a latch for holding said member after such movement a spring for moving said member in the opposite direction, and chronometric means for releasing said member from said latch after a predetermined period of time, said first mentioned means being adapted to start said chronometric means simultaneously with the movement of said member.

The references cited are: Smith, 192,946, July 10, 1877; Dittmar et al., 268,641, Dec. 5, 1882; Terlin-den et al., 463,010, Nov. 10, 1891; Lamb, 1,096,250, May 12, 1914.

The subject matter involved in this appeal is a device for automatically regulating the length of time during which an object or substance is subjected to treatment—for example, as exposure to heat or a chemical reagent—the object being to provide an apparatus by which a substance to be treated may be immersed in the reagent and after the lapse of an appointed time be withdrawn without any further attention on the part of the operator.

The regulator includes a wheel mounted to turn about a horizontal axis and having a tubular periphery divided by partitions into a number of compartments connected only by ports or passages in the partitions and filled to less than half capacity with a suitable fluid, such as mercury. The wheel is geared to a rack which is impelled in one direction by a spring and upon reaching a predetermined position trips a latch holding the container for the material under treatment and allows it to be raised by the action of a second spring. The size of the wheel and the quantity of mercury are such that the rack spring cannot rotate the wheel and mercury together, so that the speed of the wheel is limited by the flow of the mercury through the passages in the partitions. Consequently by regulating the proportions of the parts the time required to move the rack a specified distance can be determined and maintained.

The patent to Dittmar et al. shows a device for regulating the speed of motors, which is briefly described by the inventors as follows:

The invention consists in a closed drum divided into compartments by radial partitions provided with slots or apertures which establish a communication between the compartments. The drum is partly filled with a liquid, or sand, or other granulated or pulverized material, which is raised when the drum is rotated, thereby checking the speed; but the said liquid or other matter flows back through the apertures, and this prevents the speed from being checked too much. By varying the size of the drum and the size of the slots or apertures, so that the liquid or other material can flow back more or less rapidly, the speed will be checked more or less. The device can be adjusted as desired.

If the said apertures are very small and the liquid can flow back but very slowly, the rotary movement of the

shaft will be checked much more than if the apertures *b* were larger and the liquid can flow back more rapidly. By varying the size of the drum and the size of the apertures the speed of a motor can be regulated at will. Sand or other granulated or pulverized material can be used equally as well as liquids.

This appears to fully anticipate appellant's governor, for these patentees make it clear that by changing the size of the apertures or the size of the ring the retarding action can be made anything desired for the particular service, and it is clear that a fluid or pulverulent material having a certain specific gravity would require for the same retarding action a wheel of different size from that of a material having a higher or lower specific gravity, and also a material of a certain viscosity would require an aperture of different size from a material having a higher or lower viscosity.

It was argued at the hearing that appellant was entitled to broader claims than those presented on account of the discovery of the particular advantages flowing from the use of mercury in this device. The only advantage claimed is that, due to the high specific gravity of mercury, a smaller rotating device will give the desired retardation. This is believed to be obvious from the common knowledge that mercury has a high specific gravity and from its common use in horology.

However, no reference showing that others have recognized the particular utility in this same type of governor appears to be of record, and as documentary evidence is more convincing than mere opinions as to common knowledge and use attention is invited to the following patents: Alfred Wyss-Baumgartner, Swiss, 25,775, March 21, 1903; Peppe, British, 1,555, June 26, 1860.

Both of these patents show a similar governor in which mercury is the fluid to be used.

It may be well, also, to invite attention to the British patent to Morley, No. 1,325, July 22, 1782, as showing extremely early recognition of the advantages inherent to the use of mercury in similar devices.

The patent to Dittmar et al., viewed in the light of this showing as to the known properties and advantages of mercury, appears to fully anticipate claims 1 to 5 and 10.

Claim 14 relies on the difference in having a catch for holding the pan in the water secured to the frame instead of being secured to one of the other parts, which is regarded as a mechanical expedient well within the range of an ordinary person, and therefore not sufficient to support allowance.

The action of the Examiners in Chief is affirmed.

Court of Appeals of the District of Columbia.

WORDEN AND HOLZER, COPARTNERS TRADING AND DOING BUSINESS UNDER THE NAME AND STYLE OF UNITED BARBER SERVICE CO., v. CANNALIATO.

No. 1,519. Decided January 2, 1923.

1. TRADE-MARKS—X-RAY—HANDWRITTEN LABEL.

The use of a handwritten label is sufficient. It is not necessary to have it printed.

2. SAME—INTERSTATE USE.

Where a purchaser came to Baltimore, there received delivery of the goods from C., and then shipped them to himself in Richmond, *Held* that this was not a shipment by C. and has no tendency to establish interstate use of the mark.

3. SAME—SAME.

A single instance of use, with accompanying circumstances showing an intention to continue the use, satisfies the law. Where C. made a shipment from Baltimore to New York and was ready from that time on to supply any demand that might come to him for shipment between the States, this was enough to establish interstate use.

Mr. John E. Cross for Worden et al.

Mr. L. F. Randolph, Mr. J. F. Byrne, and Mr. H. M. Sterling for Cannaliato.

Before SMYTH, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

SMYTH, C. J.:

Cannaliato had registered for him in the Patent Office a trade-mark for hair tonic, a predominant and essential feature of which was the name "X-Ray." He claimed to have used the mark on his goods continuously from May, 1913. Appellants claiming to have adopted the same mark for a like product in 1915, petitioned the Commissioner to cancel appellee's mark, on the ground that he was not entitled to it and that the registration of it caused them damage. Both tribunals of the Patent Office found against them and dismissed the application. They appeal, asserting (1) that they had adopted and used the mark before the appellee did, and (2) that he never made a sufficient use of it in interstate commerce to entitle him to have it registered.

Cannaliato established that he commenced the preparation of his hair tonic in 1912; that, at the instance of a person connected with a barber-supply company, for which Holzer, one of the appellants, was then working, he adopted the name "X-Ray" as a mark for his tonic; that at first he used handwritten labels, which were written by a friend, who corroborates him; that he kept the tonic for sale in his barber shop, and distributed it from there to those whom he could induce to purchase it; that he sold many bottles of it with the trade-mark attached during the year 1914, and continued to sell it wherever he could up to the time when he made application to have the mark registered; that a barber doing business in Richmond, Va., purchased a half gallon of the tonic from him in Baltimore and shipped it to his place of business in Richmond, that the container bore Cannaliato's trade-mark; that in the same year he sold two gallons of the tonic under the same label and shipped it to a person in New York, and that he used the mark uninterruptedly on his product up to the time the mark was registered. There is testimony which tends very strongly to show that Holzer had knowledge of the appellee's use of the mark long before it was adopted by Holzer and his partner. We are satisfied that the appellee has clearly established that he was the first to use the mark.

[1] The use of the handwritten label was sufficient. It was not necessary to have it printed. (*Regis v. Jaynes & Co.*, 185 Mass., 458.) The statute does not require it.

[2, 3] This brings us to consider whether or not Cannaliato's use of the mark in interstate commerce was sufficient to satisfy the statute. We do not think the shipment to Richmond helps him in that regard. It appears that the purchaser came to Baltimore, there received delivery of the goods, and then shipped them to himself in Richmond. This was not a shipment by Cannaliato, and we put it aside as having no tendency to establish interstate use of the mark. The shipment to New York, however, is in a different category. It was made by Cannaliato in 1914, and establishes the use of the mark in interstate commerce before the appellants came into the field. He was ready from that time on to supply any demand that might come to him for shipment between the States. We think this was enough to establish interstate use. No particular period of use is necessary. A single instance of use, with accompanying circumstances showing an intention to continue the use, satisfies the law. (*Kohler Manufacturing Co. v. Beshore*, 59 Fed., 572; 67 O. G., 678; *Kathreiner's Malz-kaffee Fabriken, Etc. v. Pastor Kneipp Medicine Co.*, 82 Fed., 321; *Ritz Cycle Car Co. v. Driggs-Seabury Ordnance Corp.*, 237 Fed., 125; *Wallace & Co. v. Repetti, Inc.*, 266 Fed., 307.) Cannaliato's intention to continue the use of the mark is manifest.

Appellants bring to our attention a number of authorities, among which are *Menendez v. Holt* (128 U. S., 514; 46 O. G., 971), *Kohler Manufacturing Co. v. Beshore* (53 Fed., 262; 67 O. G., 678), *Richter v. Reynolds* (59 Fed., 577; 67 O. G., 404), and *Phillips v. Hudnut* (263 Fed., 643; 273 O. G., 629), to support their contention that the interstate use shown was not sufficient. Special stress is laid upon the Phillips case. The facts there, however, were entirely different from what they are here. Phillips had no established place of business, placed his mark upon some sample boxes of toilet powder, the article for which he claimed a trade-mark, forwarded them to three dealers without any request to do so, and charged for each box five cents, the usual price being fifty cents a box. No other use of the mark was made by him. It was held that the sales, if they could be called such, made by Phillips were not made in good faith, and did not constitute such a use of the mark as was required by the statute. The circumstances did not indicate an intention to continue the use. This was fatal. Nothing in the other cases helps the appellants. True, as Hopkins on Trade-Marks (3 Ed., p. 72) says—

the use of the mark by one claimant may be so transitory, spasmodic and inconsiderable as not to vest title in the user as against one whose use has been long continued and universally recognized.

The use by Cannaliato was not spasmodic or inconsiderable. (See also Paul on Trade-Marks, sec. 91, p. 151.)

We are satisfied that Cannaliato's mark was properly registered, and therefore that the decision of the Commissioner should be, and it is, affirmed. Affirmed.

PATENT SUITS.

[Notices under section 4921, Revised Statutes, as amended February 18, 1922.]

843,926, P. Brasher, Protecting objects from wave action, suit filed Apr. 16, 1923, U. S. D. C., N. D. Calif., Doc. 16879, *Brasher Breakwater Co. v. Standard Oil Co. of Calif.*

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,342,209, T. P. Giblin, Electrical coil, decided Mar. 14, 1923, claims 1, 3, and 4.

Pat. 1,376,539, Henne and Preo, Machine for affixing heels to shoes, decided May 22, 1923, claims 1, 2, 3, and 15.

Notice of Cancellation.

U. S. PATENT OFFICE, Washington, June 8, 1923.

Reed, Walsh & Lange, its assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of Duffy-Mott Company, Inc., of No. 502 West Twenty-fifth Street, New York, N. Y., to effect the cancellation of trade-mark registration No. 28,448, registered June 23, 1896, to Reed, Walsh & Lange, of Nos. 65 and 67 South Water Street, Chicago, Ill., and the notice of such proceeding sent by registered mail to said Reed, Walsh & Lange at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Reed, Walsh & Lange, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the cancellation will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
Acting Commissioner.

Interference Notices.

U. S. PATENT OFFICE, Washington, June 15, 1923.

Adolf Bromberg, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application for patent filed by Adolf Bromberg, 167 Wooster Street, New York, N. Y., and an application for patent filed by Elmer S. Rutter, 510 Palisade Avenue, Weehawken Heights, N. J., and a notice of such declaration sent to said Bromberg at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Bromberg, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

U. S. PATENT OFFICE, Washington, June 21, 1923.

Richard L. Clements, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the patent granted December 26, 1922, No. 1,440,057, to Richard L. Clements, care of J. E. Regan Machine Works, 76 Seventh Street, Long Island City, N. Y., and an application for patent filed by Melchior Armato, 1284 Clybourn Avenue, Chicago, Ill., and a notice of such declaration sent by registered mail to said Clements at the address of record and reforwarded to 4 Ketcham Place, Elmhurst, N. Y., the address furnished by his attorney, having been returned by the post office undeliverable, notice is hereby given that unless said Clements, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING,
Acting Commissioner.

TRADE-MARKS

OFFICIAL GAZETTE, JULY 3, 1923.

[Vol. 312. No. 1.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 101,984. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) FRANKLIN-CARO COMPANY, INC., Richmond, Va. Filed Mar. 8, 1917.

VELVET

Particular description of goods.—Chewing Gum.
Claims use since Mar. 1, 1917.

Ser. No. 143,977. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) BRITISH AMERICA NICKEL CORP'N LTD., Ottawa, Ontario, Canada. Filed Feb. 24, 1921.

BANCO

Particular description of goods.—Nickel Sulphate.
Claims use since Jan. 1, 1920.

Ser. No. 143,978. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) BRITISH AMERICA NICKEL CORP'N LTD., Ottawa, Ontario, Canada. Filed Feb. 24, 1921.

BANCO

Particular description of goods.—Nickel Ammonium Sulphate.
Claims use since Jan. 1, 1920.

Ser. No. 149,621. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) AMERICAN CUTLERY COMPANY, Chicago, Ill. Filed June 25, 1921.

EVERBRITE

Particular description of goods.—Table Knives of Base Metal and Particularly of Incorrodible Iron Alloys.
Claims use since on or about Nov. 11, 1916.

Ser. No. 153,477. (CLASS 39. CLOTHING.) LEVI STRAUSS & Co., San Francisco, Calif. Filed Sept. 28, 1921.

In the accompanying drawing the colors indicated by that portion lined for color are as follows: Horizontal lines indicate blue; vertical lines indicate red.
Particular description of goods.—Men's, Youths', and Boys' Dress, Negligee, and Work Shirts.
Claims use since Aug. 31, 1921.

Ser. No. 154,654. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) N. KJAERGAARD JENSENS TEKN. KEM. FABRIK, Copenhagen, Denmark. Filed Oct. 27, 1921.

Particular description of goods.—Rennet, Junket Tablets, and Lactic Ferment.
Claims use since June 21, 1920.

Ser. No. 154,810. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) NEW ENGLAND CONFECTIONERY COMPANY, Boston, Mass. Filed Oct. 31, 1921.

SCORCHER

Trade-mark consists of the word "Scorcher."
Particular description of goods.—Candy.
Claims use since 1890.

Ser. No. 155,253. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) RICHARD H. COBB, doing business as The Yeast-O-Mint Co., Cleveland, Ohio. Filed Nov. 10, 1921.

YEAST-O-MINT

Particular description of goods.—Chewing Gum.
Claims use since Sept. 28, 1921.

Ser. No. 155,737. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) CAMPFIRE MANUFACTURING COMPANY, St. Louis, Mo. Filed Nov. 22, 1921.

Campfire Grub Stake

Particular description of goods.—Devices for Supporting Cooking Utensils and Other Articles over an Open Fire.

Claims use since Aug. 1, 1921.

Ser. No. 157,431. (CLASS 39. CLOTHING.) KNITWEAR MANUFACTURING CO., INC., Brooklyn, N. Y. Filed Jan. 3, 1922.

FAREISLE

Particular description of goods.—Clothing—Namely, Knitted Sweaters and Knitted Dress Skirts.

Claims use since Sept. 1, 1921.

Ser. No. 157,491. (CLASS 32. FURNITURE AND UPHOLSTERY.) L. LOWENSTEIN & SON, doing business as National Feather & Pillow Company, Nashville, Tenn. Filed Jan. 4, 1922.

PRIDE OF SOUTH

Particular description of goods.—Pillows Containing Feathers.

Claims use since about 1907.

Ser. No. 157,701. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE UNITED FIG & DATE CO., Chicago, Ill. Filed Jan. 9, 1922.

No claim of exclusive rights is made as to the words "Nuts Every Kind from Everywhere" except in connection with the other features of the mark.

Particular description of goods.—Nuts and Nut Products—Namely, Nuts in the Shell, Shelled Nuts, Salted Nuts, Chopped Nuts, Nut Candy, Peanut Butter, and Mixtures of Nuts and Raisins.

Claims use since June 14, 1921.

Ser. No. 158,677. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) HUDSON MOTOR SPECIALTIES COMPANY, Philadelphia and Frankford, Pa. Filed Jan. 31, 1922.

SLIP-OUT

Particular description of goods.—Transmission or Crank Casing Parts.

Claims use since early fall of 1919.

Ser. No. 158,689. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) EDWARD V. STOCKHAM, INC., Havre de Grace, Md. Filed Jan. 31, 1922.

AMERICAN BEAUTIES

Particular description of goods.—Pork and Beans and Canned Concentrated Strained Tomatoes.

Claims use since March, 1915, on tomato paste; since July, 1920, on pork and beans.

Ser. No. 158,728. (CLASS 38. PRINTS AND PUBLICATIONS.) PHILADELPHIA QUARTZ COMPANY, Philadelphia, Pa. Filed Feb. 1, 1922.

QUARTZ-QUALITY

Silicate *Service*
Philadelphia Quartz Company, Philadelphia, Pa.
Manufacturers of Silicates of Soda in Its Various Forms.

Without waiving any rights at common law, no claim is made to the exclusive use of the words "Silicate," "Service," "Philadelphia Quartz Company, Philadelphia, Pa.," and "Manufacturers of Silicate of Soda in Its Various Forms" apart from the mark shown in the drawing.

Particular description of goods.—Publications and Printed Literature, Comprising a Printed Paper Published from Time to Time and Containing Information About Silicate of Soda for Circulation Among Different Classes of Persons Interested in Its Use.

Claims use since on or about Apr. 25, 1921.

Ser. No. 159,521. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) JOHN METKE, doing business as Queen City Specialty Company, Buffalo, N. Y. Filed Feb. 18, 1922.

MAGIC

Particular description of goods.—Waterproof Dressing for Leather, Substitute Leather, Cloth, and the Like Used for Automobile Tops.

Claims use since Aug. 7, 1921.

Ser. No. 160,240. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MELVIN HENRY BEVERIDGE, doing business as Fever Nox Company, Bayles, Calif. Filed Mar. 6, 1922.

Particular description of goods.—Ointments, Influenza Medicine, Laxative Tablets, Rubbing Oil, and Inhaling Compounds. The Ointment is Used for Healing and Allaying Fever. The Rubbing Oil is Used for Easing Rheumatic Tendencies. The Flu Drops are Used for Colds. The Inhaling Compound is for Coughs and Colds. The Laxative Tablets are a General Laxative of Candy Design.

Claims use since Jan. 1, 1910.

Ser. No. 160,604. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) HAMMER-BRAY COMPANY, Oakland, Calif. Filed Mar. 13, 1922.

ARTCRAFT

Particular description of goods.—Cookstoves, Ranges, and Heating Stoves, Exclusive of Those Heated by Electricity, But Including Gas Ranges, Gas Heaters, Gas Plates, Combination Ranges for Solid and Gaseous Fuel, and Portable Baking Ovens.

Claims use since Jan. 1, 1919.

Ser. No. 161,366. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE ELI LILLY & COMPANY, Indianapolis, Ind. Filed Mar. 28, 1922.

EPSAL

Trade-mark "Epsal."

Particular description of goods.—Medicinal Preparation to be Used as a Laxative and Cathartic.

Claims use since early in 1905.

Ser. No. 161,522. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) BUFFALO SPECIALTY COMPANY, Buffalo, N. Y. Filed Mar. 31, 1922.

NEVER-KNOCK

Particular description of goods.—Chemical Compositions for Removing Carbon from Internal-Combustion Engines and the Like.

Claims use since July 1, 1919.

Ser. No. 161,959. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) LLEWELLYN A. BANKS, doing business as Citrus Growers Cash Association, Los Angeles, Calif. Filed Apr. 10, 1922.

GLEN ROSA

Particular description of goods.—Fresh Citrus Fruits—viz, Oranges; and Fresh Deciduous Fruits—Namely, Apples.

Claims use since Nov. 7, 1913.

Ser. No. 162,092. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) N. AUTH PROV. Co., Washington, D. C. Filed Apr. 11, 1922.

Mark consists of a red circle carrying the words "Ask for Auth's" shown in white letters.

Particular description of goods.—Bovine and Swinish and Mutton Meats, Hams, Sausages, Scrapple, Meat Loaf, Sausage Meat, Lard, Bacon, and Bovine and Swinish and Mutton Meat Products.

Claims use since February, 1902.

Ser. No. 162,093. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) N. AUTH PROV. Co., Washington, D. C. Filed Apr. 11, 1922.

Drawing consists of a red circle.

Particular description of goods.—Bovine and Swinish and Mutton Meats, Hams, Sausages, Scrapple, Meat Loaf, Sausage Meat, Lard, Bacon, and Bovine and Swinish and Mutton Meat Products.

Claims use since February, 1902.

Ser. No. 162,358. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) SHAPLEIGH HARDWARE COMPANY, St. Louis, Mo. Filed Apr. 15, 1922.

**JERSEY
LILY**

Particular description of goods.—Baby Baths, Coffee Boilers, Rice Boilers, Bowls, Washbasins, Chambers, Cab-

inets, Colanders, Cups and Saucers, Cuspidors, Dippers, Soap Dishes, Vegetable Dishes, Kettles, Ladles, Pans, Saucepans, Water Pitchers, Bowl and Pitcher Sets, Dinner Plates, Pie Plates, Soup Plates, Meat Platters, Teapots, Spittoons, Sink Strainers, and Soup Strainers.

Claims use since March, 1922.

Ser. No. 162,532. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) CLINTON COPELAND Co., Burlington, Iowa. Filed Apr. 19, 1922.

Particular description of goods.—Chocolate Candies.
Claims use since Mar. 10, 1922.

Ser. No. 162,860. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) THE WICKES BOILER Co., Saginaw, Mich. Filed Apr. 24, 1922.

The word "Vertical" is disclaimed.

Particular description of goods.—Steel Boilers.
Claims use since Jan. 10, 1922.

169,913. CHOCOLATES AND CANDIES. E. GREENFIELD'S SONS, New York and Brooklyn, N. Y.

Filed October 6, 1922. Serial No. 170,377. PUBLISHED APRIL 3, 1923.

[ACT OF MARCH 19, 1920, SEC. 1 (b)].

THESE REGISTRATIONS ARE NOT SUBJECT TO OPPOSITION.

169,914. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) LEO R. McDEVITT, Pawtucket, R. I. Filed Sept. 12, 1921. Serial No. 152,854.

RIGHT OF WAY

Particular description of goods.—Visible Traffic Signals for Motor Vehicles.

Claims use since Jan. 1, 1921.

169,915. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) ANTHONY COMPANY, Streator, Ill. Filed Nov. 18, 1921. Serial No. 155,538.

ANTHONY COMPANY

The lining on drawing has no significance and is not intended to denote color.

Particular description of goods.—Vehicle Bodies and Parts.

Claims use since Jan. 1, 1920.

169,916. (CLASS 15. OILS AND GREASES.) THE KANSAS-TEXAS PETROLEUM Co., Wichita, Kans. Filed Dec. 8, 1921. Serial No. 156,451.

Particular description of goods.—Lubricating and Heat, Light, and Power Producing Oils, and Gasoline.

Claims use since Nov. 1, 1921.

169,917. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE SCOTT & FETZER COMPANY, Cleveland, Ohio. Filed Jan. 9, 1922. Serial No. 157,693.

EVER-READY

Particular description of goods.—Carpet Sweepers.
Claims use since Nov. 19, 1921.

169,918. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) THE FOX FURNACE COMPANY, Elyria, Ohio. Filed Jan. 28, 1922. Serial No. 158,570.

SUNBEAM

Particular description of goods.—Coal Furnaces.
Claims use since Nov. 8, 1920.

169,919. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) HUNT-LASHER COMPANY, INC., Lynn, Mass. Filed Apr. 12, 1922. Serial No. 162,174.

SELF BLO

Particular description of goods.—Alcohol Torches.
Claims use since on or about Nov. 1, 1921.

169,920. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) NATIONAL TWIST DRILL & TOOL COMPANY, Detroit, Mich. Filed Apr. 29, 1922. Serial No. 163,104.

PARABOLIC

Particular description of goods.—Milling Cutters.
Claims use since Apr. 14, 1922.

169,921. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) CHAS. CORY & SON, INC., New York, N. Y. Filed June 14, 1922. Serial No. 165,652.

Particular description of goods.—Ship's Mechanical Telegraph Transmitter-Indicator Equipment.
Claims use since January, 1919.

169,922. (CLASS 12. CONSTRUCTION MATERIALS.) THOMAS L. BENSON, doing business as Shreveport Chemical Company, Shreveport, La. Filed Nov. 2, 1922. Serial No. 171,483.

Particular description of goods.—Material Used to Hasten the Setting and Lower the Freezing Point of Cement.

Claims use since May 1, 1922.

169,923. (CLASS 9. EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES.) THE FEDERAL CARTRIDGE CORPORATION, Minneapolis, Minn. Filed Nov. 16, 1922. Serial No. 172,087.

HI-POWER

Particular description of goods.—Shotgun Shells and Cartridges.

Claims use since on or about Sept. 1, 1918.

169,924. (CLASS 3. BAGGAGE, HORSE EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS.) HIRSCHFELDER & MEANEY, San Francisco, Calif. Filed Dec. 19, 1922. Serial No. 173,568.

Particular description of goods.—Baggage—Namely, Trunks; Suit, Brief, and Sample Cases; Hand and Traveling Bags, Grips, Automobile Trunks, and Suitcases.

Claims use since June, 1920.

169,925. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) J. A. SEXAUER MFG. CO. INC., New York, N. Y. Filed Dec. 30, 1922. Serial No. 174,035.

MAKE THE TIGHT LINE STAY

Particular description of goods.—Rubber Double-Seat Compression and Self-Closing Cushions; Rubber, Leather, Fiber, and All Nonmetallic Washers; All Packings, Rubber Fuller Balls, Rubber Ball-Cock Cushions and Washers, Leather Ball-Cock Cups, All Gaskets, Leather Hydrant Sets, Rubber Plunger Rings, Rubber Elbows and Straight Connections with and without Fixtures, Rubber Tubing, and Pump Leathers.

Claims use for not less than one year.

169,926. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) BROADUS J. HEAD, doing business as American Plant Company, Alma, Ga. Filed Feb. 27, 1923. Serial No. 176,679.

AMERICAN PLANT CO.

Particular description of goods.—Potato Plants, Cabbage Plants, Tomato Plants, Strawberry Plants, Asparagus Plants, and Sweet Potatoes.

Claims use since Feb. 1, 1921.

169,927. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) CECIL HOWARD LAMBERT, Buffalo, N. Y. Filed Feb. 5, 1923. Serial No. 175,561.

"SURE GRIP"

Particular description of goods.—Adjustable Device for Opening and Closing Fruit Jars and Containers.

Claims use since Aug. 29, 1916.

169,928. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) TUXEDO SHIRT CO., INC., New York, N. Y. Filed Feb. 28, 1923. Serial No. 176,770.

Duro

Particular description of goods.—Silk Piece Goods.

Claims use since Jan. 1, 1922.

169,929. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) INDIANAPOLIS ABATTOIR COMPANY, Indianapolis, Ind. Filed Mar. 13, 1923. Serial No. 177,382.

"INDIANAPOLIS"

Particular description of goods.—Ham, Shoulder, Sausage, Bacon, Tongues, Dried Beef, Jowls, Butts, and Lard.

Claims use since 1902.

169,930. (CLASS 25. LOCKS AND SAFES.) CHICAGO THRIFT COMPANY, Chicago, Ill. Filed Apr. 4, 1923. Serial No. 178,552.

MONEY BARREL

Particular description of goods.—Portable Banks.

Claims use since July 1, 1921.

169,931. (CLASS 12. CONSTRUCTION MATERIALS.) THE ACORN REFINING COMPANY, Cleveland, Ohio. Filed Apr. 6, 1923. Serial No. 178,653.

Particular description of goods.—Waterproofing Compound for Building Roofs.

Claims use since January, 1910.

169,932. (CLASS 2. RECEPTACLES.) ANDREW A. KRAMER, doing business as Columbian Steel Tank Company, Kansas City, Mo. Filed Apr. 13, 1923. Serial No. 179,106.

RED BOTTOM

Particular description of goods.—Sheet-Metal Tanks.

Claims use since Mar. 1, 1922.

169,933. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) MARSHALL FIELD & COMPANY, Chicago, Ill. Filed Apr. 23, 1923. Serial No. 179,525.

PHOENICIAN CLOTH

Particular description of goods.—Sateen in the Piece.

Claims use since Mar. 1, 1920.

169,934. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) THE OWL DRUG COMPANY, San Francisco, Calif. Filed Mar. 20, 1922. Serial No. 160,966.

Make-Nu

Particular description of goods.—Canvas-Shoe Dressing and Cleaner.

Claims use since about May 1, 1917.

169,935. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) ASHAWAY LINE & TWINE MANUFACTURING COMPANY, Ashaway, R. I. Filed May 12, 1922. Serial No. 163,726.

Particular description of goods.—Fishing Lines.
Claims use since 1904.

169,936. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) LUCKEL, KING & CAKE SOAP COMPANY, Portland, Oreg. Filed July 3, 1922. Serial No. 166,458.

STEAM
REFINED

Particular description of goods.—Laundry Soap.
Claims use since about Jan. 1, 1909.

169,937. (CLASS 39. CLOTHING.) SANBORN WEATHERWEAR COAT CO. INC., New York, N. Y. Filed July 28, 1922. Serial No. 167,537.

Sanborn's

Particular description of goods.—Coats, Capes, Mantles, and Raincoats Made of Cloth, Rubberized or Cravenette Material.

Claims use since Jan. 1, 1912.

169,938. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) E. DALTROFF & CIE., doing business as Parfumerie Caron, Paris, France, assignor to Caron Corporation, a Corporation of New York. Filed Dec. 27, 1922. Serial No. 173,879.

Particular description of goods.—Perfume, Toilet Water, Rouges, Face Powder, Talcum Powder, Brillantine, Sachet Powder, and Dentifrices.

Claims use since Dec. 1, 1912.

169,939. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) TUXEDO SHIRT CO., INC., New York, N. Y. Filed Feb. 28, 1923. Serial No. 176,771.

Premier

Particular description of goods.—Silk Piece Goods and Crêpe Silk Piece Goods.

Claims use since Jan. 1, 1922.

169,940. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) C. PERCEVAL, New York, N. Y. Filed Mar. 3, 1923. Serial No. 176,915.

MILLERAND

Particular description of goods.—Canned Soups, Truffles, Cherries, and Turtle Meat.

Claims use since about 1910.

169,941. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE PINE BALM COMPANY, Shady Dale, Ga. Filed Mar. 7, 1923. Serial No. 177,105.

PINE BALM

Particular description of goods.—An Antiseptic Oil for All Pains, Old or New Sores, Cuts, Burns, Bruises, Sprains, Chapped Lips, Rheumatism, Backache, Influenza, Colds, Asthma, Pneumonia, Coughs, Suppressed Menstruation, Indigestion, Gallstone, Kidney Trouble, Piles, Toothache, Headache, Sore Throat, and Cramps.

Claims use since Mar. 1, 1922.

169,942. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ALBERT W. KNOX, Los Angeles, Calif. Filed Mar. 10, 1923. Serial No. 177,345.

Citrus Salts

Particular description of goods.—Laxative Powders.
Claims use since on or about Jan. 1, 1918.

169,943. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) L. CHESTER HUNT, Orange, Mass. Filed Mar. 15, 1923. Serial No. 177,490.

Fernwood

Particular description of goods.—Candy.
Claims use since Dec. 15, 1921.

169,944. (CLASS 15. OILS AND GREASES.) DEALERS SUPPLY COMPANY, Indianapolis, Ind. Filed May 7, 1923. Serial No. 180,274.

Long Life

Particular description of goods.—Motor Oil.
Claims use since Dec. 10, 1920.

169,945. (CLASS 15. OILS AND GREASES.) SHELL COMPANY OF CALIFORNIA, San Francisco, Calif. Filed May 1, 1923. Serial No. 180,029.

PUENTE

Particular description of goods.—Gasoline.
Claims use since Jan. 1, 1913.

TRADE-MARK REGISTRATIONS RENEWED.

19,480. POCKET CUTLERY AND RAZORS. Registered May 12, 1891. THE CANTON CUTLERY Co. Renewed May 12, 1921, to The Canton Cutlery Company, Canton, Ohio, a Corporation of Ohio, assignee.

REISSUES.

JULY 3, 1923.

15,640. POWER TYPEWRITER. MANSFIELD C. CRAWLEY, Rutherford, N. J., assignor to Addograph Company, Los Angeles, Calif., a Corporation of California. Filed Sept. 25, 1917. Serial No. 193,212. Original application filed Oct. 28, 1911, Serial No. 657,311. Divided and application filed Dec. 17, 1912, Serial No. 737,225. Original No. 1,156,061, dated Oct. 12, 1915. 51 Claims. (Cl. 197—17.)

1. The combination with a series of type bars and a bank of key levers, of a reciprocating bar for actuating the type bars, spring means for advancing the bar, a rotary motor, and means operable by said motor to retract the bar.

15,641. ARTIFICIAL FRUIT AND METHOD OF PRODUCING SAME. JAMES H. EMERY, Inwood Park, N. Y. Filed May 23, 1923. Serial No. 641,013. Original No. 1,436,024, dated Nov. 21, 1922, Serial No. 439,584, filed Jan. 24, 1921. 15 Claims. (Cl. 41—13.)

1. The method of producing a hollow imitation of an object which consists of charging a multiple part mold of the object with a temporarily-fluid composition, next imparting a gyratory movement to the mold until the composition has solidified, next removing the resultant casting from the mold, then applying color to the surface of the casting and thereafter dipping the colored casting in temporarily-fluid transparent wax whereby a thin protective coating adheres to the surface of the casting, and then abrading the protective coating with powdered pumice.

15,642. ELECTRIC CONDENSER. CHARLES F. SMITH and WILLIAM H. SMITH, Brooklyn, N. Y. Filed Oct. 13, 1922. Serial No. 594,391. Original No. 1,395,931, dated Nov. 1, 1921, Serial No. 382,090, filed May 17, 1920. 15 Claims. (Cl. 250—11.)

7. An electric condenser comprising a wrapping of metal foils and of flexible dielectric interposed between

said foils, a relatively stiff body the ends of which project beyond said wrapping, conducting leads which extend from said foils adjacent to said ends of the body, and which are folded over said ends so that each

lead will have layers on opposite sides of the respective body end, and securing means extending through said body ends and through both layers of the respective folded leads.

15,643. LATHE CHUCK. JOHN J. THACHER, Wethersfield, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 6, 1923. Serial No. 630,410. Original No. 1,446,075, dated Feb. 20, 1923, Serial No. 473,373, filed May 28, 1921. 64 Claims. (Cl. 82—40.)

1. A work driving chuck comprising the combination of a plurality of work engaging jaws, an element adapted to engage the end surfaces of the jaws so that they may be oscillated substantially about such surfaces as a fulcrum, a driving element, and means operatively connecting the driving element to the jaws to drive the work.

30. A work driving chuck comprising the combination of a driving member, a plurality of work engaging jaws, means mounted on the driving member and operatively connected to the jaws, means for setting the jaws in any one of a plurality of definite positions radially of the chuck whereby to adapt the same to operate on work pieces of different diameters, means normally closing the jaws, means for opening the jaws against the action of the last mentioned means during the rotation of the chuck, and means holding the jaws entered relative to the chuck when the jaws are in either a closed or an open position but permitting the jaws to have a slight radial floating action when the jaws are in an intermediate position.

50. A work driving chuck comprising the combination of an outer element, an inner element therein, a plurality of work engaging jaws, the jaws being operatively connected to both elements, means for supporting and rotating the chuck, spring means normally operative to rotate the outer element in the forward direction relative to the inner element and thereby close the jaws inwardly to the work, means for retarding the rotation of the outer element to open the jaws, and means whereby the jaws may be adjusted radially for driving different sized work.

DESIGNS.

JULY 3, 1923.

62,598. WRIST-WATCH CASING. GUSTAVE BASTHEIM, Pittsburgh, Pa. Filed Feb. 16, 1922. Serial No. 735. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a wrist watch casing, as shown.

62,599. SHOE HEEL. FRANK BERENSTEIN, Chelsea, Mass., assignor to Panther Rubber Manufacturing Company, Stoughton, Mass., a Corporation of Massachusetts. Filed Dec. 23, 1922. Serial No. 4,701. Term of patent 14 years.

The ornamental design for a shoe heel as shown.

62,600. TEXTILE FABRIC. JOHN S. BOYD and THOMAS F. BOYD, Williamstown, Mass., assignors to John S. Boyd Co. Inc., Williamstown, Mass., a Corporation of Massachusetts. Filed Dec. 12, 1922. Serial No. 4,571. Term of patent 14 years.

The ornamental design for a textile fabric, as shown.

62,601. TEXTILE FABRIC. JOHN S. BOYD and THOMAS F. BOYD, Williamstown, Mass., assignors to John S. Boyd Co. Inc., Williamstown, Mass., a Corporation of Massachusetts. Filed Dec. 12, 1922. Serial No. 4,573. Term of patent 14 years.

The ornamental design for a textile fabric, as shown.

62,602. TEXTILE FABRIC. JOHN S. BOYD and THOMAS F. BOYD, Williamstown, Mass., assignors to John S. Boyd Co. Inc., Williamstown, Mass., a Corporation of Massachusetts. Filed Jan. 9, 1923. Serial No. 4,842. Term of patent 14 years.

The ornamental design for a textile fabric, as shown.

62,603. TOY. HARRY P. BRAISTED, Woodmont, Conn., assignor to The John Hugo Manufacturing Company, New Haven, Conn., a Corporation of Connecticut. Filed Jan. 13, 1923. Serial No. 4,880. Term of patent 7 years.

The ornamental design for a toy, substantially as shown and described.

- 62,604. FOOT REST. JULIA WATSON DE SHIELDS, Riverdale-on-Hudson, N. Y. Filed Aug. 19, 1922. Serial No. 3,460. Term of patent 7 years.

The ornamental design for a foot rest as shown.

- 62,605. RECEPTACLE FOR FLOWERS. CARRIE D. DUDLEY, Chicago, Ill. Filed Aug. 31, 1922. Serial No. 3,602. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a receptacle for flowers, as shown.

- 62,606. TEXTILE FABRIC. EMILE ERICSON, Pelham, and ROGER WEISS, New York, N. Y., assignors to The Pennsylvania Textile Mills Inc., Glenriddle, Pa., a Corporation of Pennsylvania. Filed Dec. 22, 1922. Serial No. 4,658. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a textile fabric, substantially as shown.

312 O. G.—4

- 62,607. TEXTILE FABRIC. GUSTAVE M. FAUSER, Ardsley, N. Y., assignor to The Pennsylvania Textile Mills Inc., Glenriddle, Pa., a Corporation of Pennsylvania. Filed Dec. 22, 1922. Serial No. 4,683. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a textile fabric, substantially as shown.

- 62,608. TEXTILE FABRIC. GUSTAVE M. FAUSER, Ardsley, N. Y., assignor to The Pennsylvania Textile Mills Inc., Glenriddle, Pa., a Corporation of Pennsylvania. Filed Dec. 22, 1922. Serial No. 4,684. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a textile fabric, substantially as shown.

- 62,609. TEXTILE FABRIC. GUSTAVE M. FAUSER, Ardsley, N. Y., assignor to The Pennsylvania Textile Mills Inc., Glenriddle, Pa., a Corporation of Pennsylvania. Filed Dec. 22, 1922. Serial No. 4,686. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a textile fabric, substantially as shown.

62,610. TEXTILE FABRIC. GUSTAVE M. FAUSER, Ardsley, N. Y., assignor to The Pennsylvania Textile Mills Inc., Glenriddle, Pa., a Corporation of Pennsylvania. Filed Dec. 22, 1922. Serial No. 4,691. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a textile fabric, substantially as shown.

62,611. HARD CANDY CONFECTION. ALAN HOCHSTRASER, Denver, Colo. Filed Jan. 8, 1923. Serial No. 4,836. Term of patent 7 years.

The ornamental design for hard candy confection as shown.

62,612. MESH BAG. JOHN FRANCES KILLION, Norfolk, Mass., assignor to Whiting Chain Company, a Corporation of Massachusetts. Filed Aug. 29, 1922. Serial No. 3,591. Term of patent 7 years.

The ornamental design for a mesh bag as shown.

62,613. PEN OR PENCIL CASE. FRANK J. KRISTOFER, St. Paul, Minn., assignor to Brown & Bigelow, St. Paul, Minn., a Corporation of Minnesota. Filed Jan. 30, 1922. Serial No. 447. Term of patent 14 years.

The ornamental design for a pen or pencil case as shown.

62,614. PEN OR PENCIL CASE. FRANK J. KRISTOFER, St. Paul, Minn., assignor to Brown & Bigelow, St. Paul, Minn., a Corporation of Minnesota. Filed Jan. 30, 1922. Serial No. 448. Term of patent 14 years.

The ornamental design for a pen or pencil case as shown.

- 62,615. PEN OR PENCIL CASE. FRANK J. KRISTOFEK, St. Paul, Minn., assignor to Brown & Bigelow, St. Paul, Minn., a Corporation of Minnesota. Filed Jan. 30, 1922. Serial No. 449. Term of patent 14 years.

The ornamental design for a pen or pencil case as shown.

- 62,616. NAME PLATE FOR GASOLINE-DISPENSING APPARATUS. WILLIAM CLARE MACMILLEN, Rochester, Pa. Filed Jan. 4, 1922. Serial No. 35. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a name plate for gasoline dispensing apparatus, as shown.

- 62,617. TEXTILE FABRIC. JAMES W. MCCREEDY, New York, N. Y., assignor to Max Kaufmann & Company, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 20, 1923. Serial No. 4,955. Term of patent 14 years.

The ornamental design for a textile fabric, as shown.

- 62,618. TEXTILE FABRIC. JAMES W. MCCREEDY, New York, N. Y., assignor to Max Kaufmann & Company, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 20, 1923. Serial No. 4,956. Term of patent 14 years.

The ornamental design for a textile fabric, as shown.

- 62,619. TEXTILE FABRIC. JAMES W. MCCREEDY, New York, N. Y., assignor to Max Kaufmann & Company, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 20, 1923. Serial No. 4,957. Term of patent 14 years.

The ornamental design for a textile fabric, as shown.

62,620. TIRE. WALTER N. RAACH and CLINTON E. SHUTLIFF, Greenville Borough, Pa., assignors to The Shenango Tire & Rubber Company, Greenville, Pa., a Corporation of Delaware. Filed Aug. 13, 1920. Serial No. 403,403. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a tire, substantially as shown.

62,621. MESH BAG. HARRY BRADLEY ROWAN, North Attleboro, Mass., assignor to Whiting & Davis Company, a Corporation of Massachusetts. Filed July 14, 1922. Serial No. 3,082. Term of patent 7 years.

The ornamental design for a mesh bag as shown.

62,622. MESH BAG. HARRY BRADLEY ROWAN, North Attleboro, Mass., assignor to Whiting & Davis Company, a Corporation of Massachusetts. Filed July 28, 1922. Serial No. 3,228. Term of patent 7 years.

The ornamental design for a mesh bag as shown.

62,623. DESK. ALFRED H. STRINGE, Chicago, Ill., assignor to Commercial Furniture Company, Chicago, Ill. Filed Jan. 26, 1922. Serial No. 369. Term of patent 7 years.

The ornamental design for a desk, as shown.

62,624. DESK. ALFRED H. STRINGE, Chicago, Ill., assignor to Commercial Furniture Company, Chicago, Ill. Filed Jan. 26, 1922. Serial No. 370. Term of patent 7 years.

The ornamental design for a desk, as shown.

62,625. FIRE FAN. RICHARD CLIPSTON STURGIS, Boston, Mass. Filed Apr. 5, 1922. Serial No. 1,548. Term of patent 14 years.

The ornamental design for a fire fan, as shown.

62,626. DISH. JULES H. VENON, New York, N. Y. Filed Oct. 31, 1922. Serial No. 4,174. Term of patent 7 years.

The ornamental design for a dish as shown.

62,627. CUP. JULES H. VENON, New York, N. Y. Filed Oct. 31, 1922. Serial No. 4,175. Term of patent 7 years.

The ornamental design for a cup, as shown.

62,628. WATCH CHARM, PENDANT, OR SIMILAR ARTICLE. FRANK R. WENTWORTH, Russell, Kans. Filed Oct. 18, 1921. Serial No. 508,624. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a watch charm, pendant, or similar article as shown.

62,629. CLOCK CASE. RICHARD HENRY WHITEHEAD, New Haven, Conn., assignor to New Haven Clock Co., New Haven, Conn., a Corporation. Filed Mar. 7, 1923. Serial No. 5,388. Term of patent 14 years.

The ornamental design for a clock-case as shown.

PATENTS

GRANTED JULY 3, 1923.

1,460,361. MEANS FOR SECURING WINDOW SASHES IN POSITION. ISRAEL BENJAMINS, Brooklyn, N. Y. Filed Mar. 15, 1921. Serial No. 452,457. 3 Claims. (Cl. 292—155.)

1. In a means for securing window sashes in position a tubular member terminating at the inner end thereof in a prism, a thread of a suitable pitch on the exterior of said member, a nut adapted to fit said thread, and to be secured to the inner sash a handle having therein a prismatic opening whereby it may be detachably connected to said member and adapted to turn the same through part of a revolution and to cooperate with said thread and nut to advance said member, by its motion through a part of a revolution, and to cause it to bear against the outer sash.

1,460,362. ACTUATING MECHANISM FOR WORK SUPPORTS. JOHN M. BENJAMIN, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 11, 1919. Serial No. 281,939. 27 Claims. (Cl. 1—32.)

1. A machine of the class described comprising supports for the work movable in different directions, and means arranged to move one of the supports from another support in the movement of the latter and in one direction only.

1,460,363. VALVE MECHANISM FOR GLASS MACHINES. ALBERT R. BETHEL, Minotola, N. J., assignor to Illinois Glass Company, Bridgeton, N. J., a Corporation of Illinois. Filed Feb. 4, 1921. Serial No. 442,347. 2 Claims. (Cl. 137—144.)

2. A valve attachment comprising standards, a driven shaft journaled in said standards, an intake manifold for

live motive fluid carried by said standards, a clutch sleeve loosely mounted on said shaft, a plurality of cam supports adjustable on said clutch sleeve, cam members circumferentially adjustable on said cam support, a man-

ually actuated clutch collar carried by said shaft to control the rotation of said clutch sleeve, and a plurality of independent valve mechanisms in communication with said manifold and carried thereby and operatively connected with said cam members to be controlled by them.

1,460,364. TRAIN-PIPE CONNECTOR. HENRY F. BICKEL, Plainfield, N. J., assignor to The New York Air Brake Company, a Corporation of New York. Filed Feb. 2, 1921. Serial No. 441,861. 4 Claims. (Cl. 285—58.)

1. The combination of a train-pipe; a hose connected thereto at one of its ends; a train-pipe hose coupling connected to the other end of said hose; an automatic connector head; and swiveled clamping means on said head for releasably connecting said train pipe hose coupling thereto to establish communication between said hose head and pipe.

1,460,365. APPARATUS FOR CONDITIONING COUCH ROLLS. HUGH BOYLE, Brooklyn, N. Y. Filed May 6, 1922. Serial No. 558,910. 18 Claims. (Cl. 92—47.)

1. In a paper making machine, the combination with a couch roll having yieldable paper contacting material

thereon, of suction means exteriorly acting on the paper contacting surface of said material.

17. In a couch roll conditioning apparatus, the combination of liquid spray means for the pulp sheet contacting surface of said couch roll, scraping means for said surface, and pneumatic drying means for said surface.

1,460,366. APPARATUS FOR REGULATING COMBUSTION. FRANCIS H. BROWN, Glen Olden, Pa., assignor to Petroleum Heat and Power Company, Boston, Mass., a Corporation of Delaware. Filed Mar. 8, 1920. Serial No. 364,048. 8 Claims. (Cl. 238—8.)

1. In a regulating apparatus, the combination of a burner, means to supply oil and steam thereto including valves, a support for said valves, a sliding frame upon said support, pressure controlled means for imparting sliding movement to said frame, bars adjustably mounted upon said frame one for connection with the oil valve and the other for connection with the steam valve, and means for adjusting said bars to different inclination upon the frame to vary the movement imparted to the valves upon sliding movement of the frame.

8. In a regulating apparatus, the combination of a burner, means to supply oil and steam thereto including valves, a sliding frame, an operating connection between the frame and oil valve, an operating connection between the frame and steam valve, a pressure controlled motor for imparting movement to the frame to actuate the valves, and means for indicating the adjustment of the valves comprising imitation valves actuated by the valve adjusting means to reproduce the valve adjustment.

1,460,367. PUMP-CONTROLLED RECORDING APPARATUS. WESLEY T. COLLINS and CLAUDE B. ADAMS, Colorado Springs, Colo., assignors to The A. C. Gas Register Company, Colorado Springs, Colo., a Corporation of Colorado. Filed Jan. 19, 1917. Serial No. 143,340. 16 Claims. (Cl. 234—34.)

1. In a pump-controlled recording apparatus, the combination of a printing mechanism, mechanism for feeding a strip of material to said printing mechanism, and a main operating element adapted to be operatively connected with a pump and having operating connections with the printing and strip feeding mechanism, said operating element adapted, when the pump is operated to discharge a predetermined unit quantity of liquid, to operate the printing and strip feeding mechanisms, causing thereby feeding of the strip of material and printing of the same each time a measured unit quantity of liquid is discharged.

14. In a recording fluid dispensing apparatus the combination with the record strip thereof, of means for printing quantity denoting marks upon said strip only during the discharge of fluid therefrom.

1,460,368. ELECTRIC SIGNALING SYSTEM. LEO H. DARROW, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Jan. 30, 1920. Serial No. 355,173. 2 Claims. (Cl. 179—49.)

1. In a signaling system, the combination with a line circuit terminating in a plurality of multicontact jacks, of a marginal relay having one winding effectively connected with the sleeve contacts of the jacks at one end of said line circuit, a cord circuit having a supervisory signal and a source of current also connected with the sleeve contacts of the said jacks to which the said marginal relay is connected, whereby the said relay may be

locked up, a plurality of other cord circuits having busy-test branches connected with the tip conductors thereof, the electrical constants of which branches are so proportioned as to prevent the release of the said marginal relay when a predetermined number of busy tests are simultaneously made.

1,460,369. MIXING CHAMBER FOR FLUID-FUEL BURNERS. GEORGES A. DE GUIRE, Montreal, Quebec, Canada. Filed Sept. 21, 1922. Serial No. 589,613. 9 Claims. (Cl. 48—180.)

6. A gas mixing chamber comprising two elements each coiled concentrically and spirally upon itself to produce concentric chambers of the same radial depth throughout and each a continuation of the preceding one, those of one element being extended in an opposite direction longitudinally relatively to those of the other, means for connecting said elements so that the coils of one become continuations of the coils of the other, means for delivering fluid fuel to the outer coils of said chambers and means for delivering fluid fuel from the innermost coils thereof.

1,460,370. AIR-LEAK VENT FOR TORPEDOES. WILLIAM DIETER, Newark, N. J. Filed Aug. 4, 1922. Serial No. 579,667. 7 Claims. (Cl. 114—20.)

1. In a torpedo having a liquid compartment and means for venting gaseous pressure therefrom having a vent outlet at the normally upper part of such compartment, the combination therewith of means for excluding liquid from said outlet in case of such rolling of the torpedo as would submerge such outlet, comprising a chamber communicating with said outlet having restricted communication with the compartment.

1,460,371. MACHINE FOR PREPARING BUTTERED BREAD. LAUE FREDERIK JOHANNES DIXEN, Frederiksberg, near Copenhagen, Denmark. Filed May 27, 1920. Serial No. 384,674. 9 Claims. (Cl. 91—14.)

1. A machine for slicing and buttering bread, comprising a butter container, a butter discharging mechanism in the container, a bread holder beneath the container, means for advancing bread in the holder, a stationary slicing knife, and means for rotating the bread holder along the knife and simultaneously actuating the butter discharging mechanism.

1,460,372. HOLLOW SHEET-METAL STRUCTURE. CLAUDIUS DORNIER, Friedrichshafen, Germany, assignor of one-half to Dornier-Metallbauten, Gesellschaft mit beschränkter Haftung, Friedrichshafen, Germany. Filed June 28, 1920. Serial No. 392,541. 9 Claims. (Cl. 244—30.)

3. In a hollow metallic structure in combination, a sheet metal mantle and a plurality of longitudinal trusses formed of open channelled rods and annular cross-frames of substantially angular section connected with said mantle to form a plurality of coherent closed hollow sections.

1,460,373. FEEDING MECHANISM FOR TIN-PLATE-LITHOGRAPHING MACHINES. CHARLES FINIGAN, Gibsonia, Pa. Filed May 27, 1922. Serial No. 564,258. 3 Claims. (Cl. 271—36.)

1. In feeding mechanism, the combination with a magazine and a stack of tin plates therein, of a drum rotatably mounted above said magazine, magnets radiating from said drum and spaced apart equal distances around the drum and adapted to be disposed above the plates successively in the rotation of the drum, means for rotating the drum, means for energizing each magnet as it reaches the position above the plates, so that the topmost plate may be drawn to the magnet and removed from the magazine in the rotation of the drum, said drum rotating means comprising a motor and connections between said motor and drum whereby the drum may be rotated in a step by step manner.

1,460,374. STOVE. HANS FUNKE, Zittau, Germany.
Filed Nov. 13, 1922. Serial No. 600,712. 4 Claims.
(Cl. 126—58.)

1. A stove for rooms and the like, comprising members, forming each an entire layer, having a horizontal wall and being adapted to be placed one upon the other or others and of which at least three have a lateral recess affording access to the ash-space, the fire-space, and at least one warming space, in combination with a water basin arranged in the top stove-member; a covering plate for said basin, said plate forming the bottom of a warming space located above the basin in an upper stove member, as set forth.

1,460,375. SELF-LOCKING SHORE. ARTHUR A. GRONROS, Pontiac, Mich. Filed Nov. 12, 1920. Serial No. 423,529. 1 Claim. (Cl. 248—3.)

In an adjustable shore including a column, a base secured to the lower end of the column, a top member slidably associated with the column toward and away from the base including a head block and depending hangers, and a grip means associated with the lower ends of the hangers for engaging the column, means for releasing the grip members including a U-shaped band having parallel legs pivotally connected to one hanger and a curved connecting portion embracing the other hanger, a slot and pin connection between said legs and the last mentioned hanger, and an adjustable member carried by the curved connecting portion for engaging the last mentioned hanger.

1,460,376. PAPER-SHEET-FEEDING MACHINE. FRANK R. HARTMAN, Chicago, Ill. Filed Sept. 30, 1920. Serial No. 413,859. 4 Claims. (Cl. 271—39.)

1. The combination in a paper feeding machine of a magazine adapted to receive a plurality of sheets in an approximately vertical position, the said mechanism comprising a fixed top member, a bottom member held

in spaced relation and approximately parallel to said top member, means for adjusting the relation of said bottom member to said top member, a paper guide at the forward or delivery end of said magazine, a paper wiping or feeding device consisting of a resilient cushion carried at the free end of an arm moving at an angle to the plane of the foremost sheet in the magazine, a pair of impinging rolls located immediately above the sheet guiding means in the magazine whereby to receive a single sheet elevated by the feeding means from

the delivery end of the magazine, a curved guide adjacent the said impinging feed rolls adapted to receive the forward edge of a sheet fed therefrom and to deflect the same from a substantially vertical to a substantially horizontal position, a second pair of impinging feed rolls adapted to receive the forward edge of a sheet from the delivery end of said curved guide member and to feed the same therefrom in a substantially horizontal position, and means for operating said impinging rolls and said paper feeding or wiping device in substantial synchronism.

1,460,377. AUTOMOBILE ALARM SYSTEM. HARRY C. HAY, Newport, Ky., assignor of one-half to William C. Buten, Newport, Ky. Filed Feb 3, 1922. Serial No. 533,973. 16 Claims. (Cl. 116—33.)

2. In an automobile alarm signal, a bell housing having perforations therein, a guard plate secured therein in spaced apart relation from the walls of said bell housing, a cover plate having sound perforations therein and a guard plate secured to said cover plate in spaced apart relation therefrom and from the walls of said housing, a bell within said housing, a lock casing having a recess therein, a slidable lock mounted therein and means connected to said lock and to said bell respectively, whereby said bell is held in non-alarm sounding position when the lock bolt is disengaged and in sound alarm position when the bolt is in locked engagement with said recess.

1,460,378. FILM DRIER. JOHN W. HICKS, Madison, Wis., and WALTER W. HICKS, Washington, D. C. Filed Nov. 9, 1921. Serial No. 514,002. 11 Claims. (Cl. 34—40.)

1. A drier for films comprising a casing, rods arranged therein, and racks slidable on said rods and having means for gripping articles, said article gripping means being slidably supported by said rods.

1,460,379. CONTINUOUS WIRE-DRAWING MACHINE. JAMES A. HORTON, Worcester, Mass. Filed Oct. 25, 1921. Serial No. 510,291. 16 Claims. (Cl. 205—14.)

1. In a continuous wire drawing machine, a source of power, two dies arranged in series, two drums each of which is arranged to draw wire through one of said dies, differential gearing connected with said two drums and the source of power, respectively, a third die, a third drum to draw the wire through said third die, a yielding connection between the source of power and said third drum, and means operated in consequence of the relative movement of said yielding connection for regulating the speed of said third drum, whereby to prevent slip of the wire on the first two drums.

1,460,380. FRYING PAN. HIRAM C. HUGHES, Boston, Mass. Filed Feb. 20, 1922. Serial No. 537,775. 1 Claim. (Cl. 53—7.)

A frying pan having a continuous, imperforate flooring comprising supports having cooking surfaces of considerable extent and a series of gutters located between said supports to catch the drippings from the articles being cooked, the under sides of said supports being recessed whereby they will form pockets to hold the heat

from the fire, and the upper or cooking surfaces of said supports being formed concave so as to be adapted to

receive and hold small amounts of grease drippings to prevent articles which are being cooked from sticking to the extended cooking surfaces.

1,460,381. BUCKLE. ERNEST NELSON HUMPHREY, New Britain, Conn. Filed Sept. 1, 1922. Serial No. 585,607. 8 Claims. (Cl. 24—191.)

1. In a buckle, a front plate, a second plate pivotally connected to the back of the front plate and spaced apart therefrom, a third plate pivotally connected adjacent the free end of the second plate, with means co-acting with said second plate to secure the buckle fixedly to one end of a belt, a movable cam adjacent the free end of said third plate and carried thereby and located adjacent to the pivotal portion of said second plate when in operative position.

1,460,382. DOOR ENGINE CONTROL. LEE P. HYNES, Albany, N. Y., assignor to Consolidated Car-Heating Company, Albany, N. Y., a Corporation of West Virginia. Filed Feb. 28, 1920. Serial No. 362,163. 18 Claims. (Cl. 105—341.)

1. The combination with the door-operating circuits on two or more cars of a train, of a local external train line extending along the said two or more cars and contacts connecting the said train line with the said circuits.

1,460,383. LUBRICATING SYSTEM AND APPARATUS. WALTER M. S. KILGOUR, Lexington, Mass. Filed May 28, 1921. Serial No. 473,449. 9 Claims. (Cl. 64—35.)

1. A support for a lubricating pad comprising a frame for holding the pad in contact with the shaft to be

lubricated, pivoted leg means extending below said frame for holding the pad in said frame against the shaft, and resilient means urging said leg means into frame-elevat-

ing position when below the pivot on which said legs are mounted and holding said legs in general conformity to the ends of said frame when above said pivot.

1,460,384. MATERIAL-HANDLING APPARATUS. WILLIAM S. KINSLEY, Reading, Mass., assignor to The Russell Company, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 5, 1920. Serial No. 349,511. 7 Claims. (Cl. 302—11.)

1. Apparatus adapted to feed wool stock to a feeder of the type used for a carding machine comprising, in combination, a conduit for carrying air blast driven stock, means for forcing a blast of air through said conduit and discharge means for said conduit providing a plurality of discharge openings substantially greater in combined area than the area of a cross-section of said conduit, whereby the stock is distributed in substantially uniform volume from the various openings with a final velocity very materially lower than its velocity through the conduit.

1,460,385. TIRE CLAMP. RAYMOND F. LACE, Columbus, Ohio, assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed July 8, 1920. Serial No. 394,613. 4 Claims. (Cl. 82—4.)

1. A tire clamp comprising in combination a main bracket adapted to be secured to a machine table or face plate, and a work-engaging toothed jaw carried by the bracket and eccentrically pivoted for movement about an axis normally parallel to the surface of the

table or face plate and perpendicular to the line of movement of the table or face plate, the said pivoted jaw being positioned to engage the surface of the work opposite to the table or face plate.

1,460,386. SELF-FILLING PEN. HYMAN LEWINSON, Erie, Pa. Filed Apr. 13, 1922. Serial No. 552,236. 3 Claims. (Cl. 120—47.)

1. In a self-filling pen, the combination of a barrel; a plunger in the barrel; a valve acting on the plunger; a stem extending from the valve to without the plunger; and means co-acting with the stem for moving the valve to open position through either rotative or axial movement of the stem relatively to the plunger.

1,460,387. STAR IDENTIFICATION PROTRACTOR. JOHN JAMES MCCracken, Norfolk, Va. Filed July 16, 1920. Serial No. 396,832. 4 Claims. (Cl. 33—1.)

1. A star identification protractor for use in connection with star charts, comprising a transparent plate provided with ellipses and intersecting curves, said curves radiating from the center of the protractor, the ellipses and curves representing the shape and relative positions of the imaginary altitude circles and azimuth curves of the earth's sphere, stereographically projected on the plane of the Equator from any zenith.

1,460,388. STONE-SUSPENSION DEVICE. JOHN E. MALKIN, New York, N. Y. Filed Apr. 26, 1922. Serial No. 556,664. 5 Claims. (Cl. 125—10.)

1. A machine of the character described, comprising a rotatable drum open on its sides, a tool holder at-

tached to said drum, means for rotating said drum, means for holding a tool in said holder, means for hold-

ing a work piece in said drum in position in front of the tool on said holder, and means for suspending the tool holder.

1,460,389. LIQUID-DISPENSING STATION. PIERRE ANDRÉ PAUL VICTOR MAULÈRE, Paris, France. Filed July 5, 1921. Serial No. 482,415. 10 Claims. (Cl. 221—67.)

1. A low pressure pneumatic apparatus for the dispensing of liquids comprising: two combined receptacles; a closed circuit of a constant mass of gas; a compressor arranged in this closed circuit; means for starting said compressor and therefore moving the gas; a set of pipes for the liquid and the gas.

1,460,390. SOLENOID. WILLIAM J. O'LEARY, Montreal, Quebec, Canada. Filed May 21, 1920. Serial No. 383,123. 19 Claims. (Cl. 200—90.)

1. A solenoid comprising a pair of conductors separated in parallel relationship by a dielectric and coiled together in superimposed convolutions about an axis,

means for supplying a current to said conductors, means electrically connecting said conductors in series whereby the flow of a normal energizing current is in the same direction in both about the axis of the coil, and means for interrupting the electrical connection between said conductors.

1,460,391. METHOD OF STAMPING BOOKBINDINGS AND THE LIKE. SIDNEY SATENSTEIN, New York, N. Y., assignor to Alchemic Gold Company, Inc., a Corporation of New York. Filed Mar. 29, 1922. Serial No. 547,715. 1 Claim. (Cl. 41—7.)

A method of stamping which comprises transferring a metallic pigment ink containing a solvent which is not volatile at atmospheric temperatures by pressure to a surface and drying the ink on the surface during the impression interval by the application of sufficient heat to ensure volatilization of the solvent.

1,460,392. MULTIPLY REINFORCED PAPER. ALBERT F. SCHENKELBERGER, Quincy, Mass., assignor to Safepack Mills, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 6, 1920. Serial No. 371,680. 2 Claims. (Cl. 154—52.)

1. A multi-ply reinforced paper comprising two sheets cementitiously united with lengthwise filaments imbedded therebetween and two other sheets united thereto with criss-cross filaments diagonal of the length of the web imbedded therebetween.

1,460,393. AXLE-MILLING MACHINE. WILLARD T. SEARS, Montclair, N. J., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 26, 1921. Serial No. 440,020. 10 Claims. (Cl. 90—15.)

1. A milling machine comprising in combination means for bodily moving and rotating a cutter spindle compris-

ing a support, a rotary bearing mounted on the support, a cutter spindle mounted eccentrically in the bearing, a gear on the spindle, a member having teeth on the interior thereof meshing with the teeth of the said gear, and means for rotating the said member and bearing.

1,460,394. ELECTRIC-INCANDESCENT-LAMP HOLDER. EDMUND FRANCIS TWEEDY, Glenbrook, Conn. Filed Jan. 3, 1919. Serial No. 269,462. 6 Claims. (Cl. 173—346.)

1. A lamp holder comprising a hollow body member, a base within said hollow body member and adapted to be removably secured therein, a lamp supporting receptacle within said body member and means between said base and said receptacle for forcing the same away from each other and independent means for forcing said receptacle toward the base.

1,460,395. PICKLING BATH AND PROCESS FOR PICKLING IRON AND STEEL. OTTO VOGEL, Dusseldorf-Oberkassel, Germany. Filed Aug. 27, 1921. Serial No. 495,954. 4 Claims. (Cl. 148—8.)

1. Pickling bath for iron consisting in acid substances dissolving iron oxides and aromatic compounds having a nucleus in which several carbon atoms are united with a nitrogen atom.

1,460,396. PLASTER AND PROCESS OF CONTROLLING THE SETTING OF PLASTER, AN ACCELERATOR THEREFOR, AND PROCESS OF MAKING SUCH ACCELERATOR. JOSEPH N. WIGGIN, East Orange, N. J., assignor to H. B. Wiggin's Sons Company, Bloomfield, N. J., a Corporation of New Jersey. Filed Apr. 29, 1920. Serial No. 377,707. 13 Claims. (Cl. 106—34.)

1. A plaster of Paris composition comprising a mass of powdered plaster of Paris substantially without water and a second mass of plaster of Paris having water mixed therewith, but in less proportion than would be sufficient to solidify said second mass.

1,460,397. PIPE GRAPPLE. JOHN G. ZEHRER, Browns Valley, Minn. Filed Apr. 21, 1922. Serial No. 555,822. 2 Claims. (Cl. 294—118.)

1. In a grapple, a pair of pivotally connected arms, jaws forming a part of the arms, means having connection with the arms for moving the jaws, a transversely extending plate carried by the arms, a guard including

a curved portion lying in spaced relation with the arms to accommodate an article therebetween, said plate

adapted to receive portions of the guard to secure the same to the arms, and means for guiding the grapple to its work.

1,460,398. CAN-CAP-SEAMING APPARATUS FOR VARNISH CANS, ETC. AUGUST M. AUGENSEN, Grand Junction, Colo. Filed Apr. 22, 1920. Serial No. 375,680. 7 Claims. (Cl. 113—24.)

1. In a device of the class described, the combination with a frame, of a vertically movable supporting chuck upon which the can rests, an aligned clamping chuck to engage the seated cap free to rotate but held from vertical movement, crimping rolls associated with the clamping chuck, and manually controlled means for continuously rotating said rolls about the cap for any desired length of time.

1,460,399. ART OF UPHOLSTERY. FRANK H. BANCROFT, Gardner, Mass., assignor to P. Derby & Co., Inc., Gardner, Mass., a Corporation of Massachusetts. Filed May 4, 1922. Serial No. 558,395. 41 Claims. (Cl. 45—138.)

1. Apparatus for upholstering chair seats and the like comprising a die, rotatable means for supporting

the die, means for holding a cover on said die, and means for forcing a seat bottom into said die to stretch the cover and maintain the cover stretched while it is

being fastened to the seat bottom, said last named means acting on said seat bottom through a follower supported independently of said last named means.

1,460,400. DISHWASHING APPARATUS. CHARLES B. BELKNAP, Detroit, Mich. Filed Nov. 6, 1920. Serial No. 422,136. 2 Claims. (Cl. 141—9.)

1. In a machine for washing dishes, the combination with a tank for holding a cleansing liquid mounted on a frame, of a vertical two part shaft carrying a rack adapted to hold utensils to be cleaned rotating in the tank, power means axially rotating the shaft, and roller bearings on the upper section of the two part shaft operating in a cam slot, causing vertical reciprocation of the rack within the tank with the axial rotation.

1,460,401. TUBING SPIDER. CHARLES H. BENCKENSTEIN, Vinton, La. Filed Mar. 22, 1921. Serial No. 454,445. 10 Claims. (Cl. 24—249.)

1. A spider including a body member provided with a substantially cylindrical passage extending therethrough,

fixed gripping means arranged in a portion of the passage wall, an arm mounted on a pivot in the body and adapted

to project into the passage, and gripping means carried by said arm and adapted to swing about said pivot as a center.

1,460,402. TUBING SPIDER. CHARLES H. BENCKENSTEIN, Vinton, La. Filed Oct. 24, 1921. Serial No. 510,011. 8 Claims. (Cl. 24—249.)

1. An apparatus of the character described composed of two sections, means for securing the two sections together, the two sections being so arranged as to form a substantially cylindrical passage therethrough when the two sections are together, a rocking arm carried by one of the sections, and a gripping jaw slidably mounted on said rocking arm.

1,460,403. MOLD FOR CEMENT BLOCKS. JAMES BONDI, Buffalo, N. Y. Filed Feb. 26, 1921. Serial No. 448,200. 3 Claims. (Cl. 25—121.)

2. In a cement block mold, a removable core comprising connected parallel plates having recesses extending to their lower edges, panels normally closing said recesses and hinged to swing inward in opening, said panels having edge recesses to provide clearances for the connecting rods of the molded block elements, the walls of said edge recesses supporting said rods during the molding operation and means arranged within said core for opening said panels.

- 1,460,404. GUIDE SHOE FOR ELEVATORS. RICHARD BRENNER, Chicago, Ill., assignor to Kaestner & Hecht Company, Chicago, Ill., a Corporation of Illinois. Filed June 21, 1920. Serial No. 390,324. 6 Claims. (Cl. 187-95.)

6. In combination with an elevator car and a vertical guide rail, a guide shoe having operative engagement with said rail and mounting means supporting said guide shoe upon said car, said mounting means permitting rotation of said guide shoe around each of two mutually perpendicular horizontal axes and including resilient means permitting a limited displacement of said guide shoe in any direction in a horizontal plane, and additional positive means imposing a definite limit on horizontal displacement of said guide shoe.

- 1,460,405. TIMING MECHANISM. OSCAR Z. BREWER, Spokane, Wash. Filed Dec. 4, 1919. Serial No. 342,484. 1 Claim. (Cl. 74-7.)

The combination in operating gearing including the driven shaft of a gear frame having a hub loose thereon and an axially aligned resilient member between said shaft and hub, means for retaining the hub on the shaft, and means for revolving the hub, as described.

- 1,460,406. SUPPORTING FRAME FOR TALKING-MACHINE MOTORS. ISAAC FRANCIS BURTON, Philadelphia, Pa., assignor to Victor Talking Machine Company, a Corporation of New Jersey. Original application filed May 15, 1918, Serial No. 234,809. Renewed Nov. 16, 1922. 11 Claims. (Cl. 185-37.)

3. In a talking machine driving mechanism comprising a power element, a power shaft, a turntable spindle located at an angle relative to said power shaft and a

governor, the combination of a supporting frame for said mechanism including a plurality of frame plates for sup-

porting said power shaft and said governor and a tie plate for joining said frame plates and supporting said turntable spindle.

- 1,460,407. SURFACING MACHINE. JOHN A. CAMPBELL, Quincy, Mass. Filed Mar. 25, 1922. Serial No. 546,586. 1 Claim. (Cl. 51-176.)

A surfacing machine comprising a platform, traction wheels, a surfacing roll, said roll and the traction wheels being arranged to support the platform raised above a floor, a hood enclosing the major portion of said roll, a centrifugal blower mounted on the platform, a conduit connecting the lower rear portion of the hood with the fan casing, and means carried by the platform for driving the roll and blower, the machine being characterized by angular arms bolted to the forward end of the platform and projecting forward and downward therefrom, said arms being provided with bearings for the roll shaft, and formed to operatively support the hood below the platform.

- 1,460,408. RHEOSTAT. ERNEST G. DANIELSON, San Francisco, Calif., assignor to E. T. Cunningham, San Francisco, Calif. Filed July 18, 1921. Serial No. 485,696. 3 Claims. (Cl. 219-56.)

1. In a rheostat, a circular disc having a peripheral groove, a conductor coiled in the form of a long helix

held within the groove, said groove being so shallow that the major portion of the helix is exposed, and a flat resilient contact arm of a single piece of metal rotatable on an axis passing through the center of the disc, said arm having a surface contacting with the helix on a plane oblique to the axis.

1,460,409. BURIAL VAULT. MATHIAS DOCHNAL, St. Louis, Mo. Filed Oct. 9, 1919. Serial No. 329,529. 2 Claims. (Cl. 27—35.)

1. A burial vault comprising a casket receiving section having an external annular flange positioned a suitable distance below the top edge of the walls of the casket receiving section, upwardly extending spring catches anchored in the flange of said casket receiving section, a shoulder formed near the upper end of each spring catch terminating upwardly in a head having an inclined outer face, a cover section telescopically embracing the body of the casket receiving section above the annular flange, said casket receiving section being provided with an internal recess opposite each spring catch and said cover section being provided with a plurality of recesses to form locking shoulders for engagement with the shoulders of the spring catches when the cover section is positioned, a screw threaded member communicating with each cover section recess capable of releasing each spring catch shoulder with the lower shoulder of the cover recesses when the screw threaded members are moved inwardly thereby permitting the removal of the cover section from the casket receiving section.

1,460,410. CONDENSATION TRAP. HUBERT C. ELLIS, Evanston, Ill., assignor to Ellis Drier & Elevator Company, Chicago, Ill., a Corporation of Wisconsin. Filed July 14, 1919. Serial No. 310,686. 6 Claims. (Cl. 137—103.)

1. In a condensation trap, the combination of a tiltable drum, an inlet for the condensate and an outlet for the condensation, a valve connected to be operated by the drum for admitting fluid under pressure to the drum to discharge the condensation, and a counterweight for the drum consisting of metal having a low melting point and secured to the drum.

1,460,411. TILTING TRAP. HUBERT C. ELLIS, Evanston, Ill., assignor to Ellis Drier & Elevator Company, Chicago, Ill., a Corporation of Wisconsin. Filed Mar. 23, 1921. Serial No. 454,823. 8 Claims. (Cl. 285—96.)

1. The combination of a trunnion pipe, fittings to which the ends of the trunnion-pipe are connected and pivotal connections between the fittings and the trunnion-pipe, one of which connections comprises a bearing-

ring fixed to the trunnion-pipe, a non-rotatable bearing-ring, and a flexible diaphragm between the non-rotatable ring and one of the fittings having one of its faces in

communication with and exposed to the pressure of the fluid in the pipe so that preponderating pressure will be applied to the diaphragm in that direction which will cause it to hold the rings in contact.

1,460,412. NUT LOCK. ANDY FRYKLO, Braznell, Pa. Filed Apr. 18, 1922. Serial No. 554,804. 1 Claim. (Cl. 151—11.)

In a nut lock comprising a bolt having longitudinal grooves, a pair of nuts positioned on said bolt, means carried by each of the nuts for engagement with the longitudinal grooves of the bolt and means for locking the nuts in a spaced relation with each other on said bolt to prevent rotation of said nuts in either direction.

1,460,413. SPRING WHEEL. HENRY W. GAINES, Bowling Green, Ky. Filed Feb. 11, 1922. Serial No. 535,848. 4 Claims. (Cl. 152—37.)

4. In a wheel of the class described, the combination of an inner rim, springs fastened to the inner rim, an

outer rim provided in its inner face with transversely-extending dovetail sockets, each socket opening at one end upon a side-face of the outer rim, a spring plug in each socket and bearing tightly against a spring each spring plug comprising an outwardly-bowed body and with laterally-extending ears at each corner of the body, said ears fitting into the side-edges of the dove-tail socket, ring-like side plates fastened to the outer rim and overlapping the inner rim, and said side plates holding the spring plugs in the sockets tightly against the springs, substantially as shown and described.

1,460,414. APPARATUS FOR DEVOLATILIZING COAL, SHALE, ETC. CLAUDE M. GARLAND, Chicago, Ill. Filed Jan. 28, 1920. Serial No. 354,531. 10 Claims. (Cl. 292—9.)

10. In apparatus of the type described, a heating chamber, a plurality of rows of vertical retorts extending through the said heating chamber, perforations in the side walls of the said retorts, an upper header communicating with the upper ends of a plurality of the retorts in a row, a gas outlet connection communicating with the said upper header, a sealed cover for closing the said upper header, a lower header communicating with the lower ends of the above said plurality of retorts, a swinging fuel support within the said lower header, a sealed cover for closing the bottom of the said lower header, a pipe for the discharge of superheated steam extending along each side of each row of retorts and near the bottom thereof, and a pipe for the removal of the said superheated steam and other products extending along each side of each row of retorts and near the top thereof, substantially as described.

1,460,415. OPERATING SLIDE AND HANDLE FOR MACHINE GUNS. WALTER T. GORTON, U. S. Army. Filed July 12, 1922. Serial No. 574,555. 4 Claims. (Cl. 89—2.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

4. The combination with an automatic gun having a breech bolt, of a slide attached to the gun and connected to the bolt and operable to move the bolt to its rearmost position and means for detaining the slide to releasably hold the bolt in such rearmost position or to lock the bolt in a position just prior to the gripping of a cartridge in the cartridge belt by the extractor of the gun.

1,460,416. VEST. PHILIP E. HEIM, Sharon Hill, Pa. Filed Mar. 2, 1922. Serial No. 540,402. 1 Claim. (Cl. 2—97.)

A vest comprising front and back portions, each of said portions including a lining, the front portion having

its rear edges enclosed by piping, the back portion being stitched to said front portion in close proximity to the piping and forming a flap, the piped portion being deflected on the lining of the front portion and a flap of said back portion being folded over said piped portion and secured to said front portion whereby the size of the vest can be varied without altering the lining.

1,460,417. DUMB-WAITER LOCK. SIGURD JAHR HOFF, New York, N. Y. Filed June 6, 1922. Serial No. 566,339. 1 Claim. (Cl. 292—202.)

A lock for a vertically slidable door comprising a toothed sector mounted on said slide door, a locking lever pivoted centrally on said sector and having a stud member projecting therefrom, a curved plate secured to a wall above said door and engageable with said stud when in locked position, said curved plate secured so as to form a wedge cam surface for jamming the door in closed position, a pawl member pivoted on said lever and engageable with the toothed sector, a lug integral with said pawl, a pawl release plunger slidably mounted in said lever having a knurled head thereon, a conical head on said plunger engageable with the lug and adapted to release the pawl from the sector when depressed and a spring for returning the same to normal.

1,460,418. CAN PUNCH AND SEAL. AUDIFF JOHNSON, Stockton, Calif. Filed May 1, 1922. Serial No. 557,758. 3 Claims. (Cl. 220—51.)

1. A can punch and seal comprising a plate adapted to be located on and clamped to a can, arms carrying punches on their undersides pivotally mounted on the plate in opposed relation, and rotatable means mounted above the arms for raising the outer ends thereof at will.

1,460,419. COUNTERPOISE. BRYAN P. JOYCE, Washington, D. C. Filed Oct. 10, 1921. Serial No. 506,920. 6 Claims. (Cl. 89—37.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

5. A counterpoise, embodying a plunger, a casing into which the plunger telescopes, a packing between plunger and casing, a sealing chamber adjacent the packing, an air chamber between the plunger and casing, a ring mov-

able in the sealing chamber for sealing the passage-way between the chambers, a valve for admitting lubricant

to the sealing chamber, means for preventing the ring from blocking the valve and a valve for admitting fluid under pressure to the air chamber.

1,460,420. COUNTERPOISE. BRYAN P. JOYCE, Davenport, Iowa. Filed May 7, 1923. Serial No. 637,244. 4 Claims. (Cl. 89—37.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

4. The combination with a gun carriage provided with a socket and a trunnion journaled in the carriage, of arms secured to the trunnion, a casing, trunnions carried by the casing and journaled in the arms, successively movable plungers within the casing and an end on one of the plungers seated in the socket for oscillatory movement therein.

1,460,421. ABDOMINAL SUPPORT. MAY A. KEELER, San Francisco, Calif. Filed Oct. 24, 1918. Serial No. 259,514. 3 Claims. (Cl. 2—188.)

1. An abdominal supporter comprising a corset, straps secured to the front and back of said corset, at each side

of a central line, elastic perineal straps, means upon the ends of the first named straps through which the ends of the perineal straps may be detachably and adjustably interwoven, and side connecting cords by which the downward pull of the perineal straps may be adjustably distributed to the corset.

1,460,422. SYNTHETIC TAN AND PROCESS OF MAKING SAME. SIEGFRIED KOHN, Philadelphia, Pa., assignor to Rohm & Haas Company, a Corporation of Delaware. Filed Jan. 30, 1922. Serial No. 532,912. 4 Claims. (Cl. 260—2.)

4. The process of producing a synthetic tan which comprises the steps of treating a carbohydrate with sulphuric acid under conditions adapted to produce a solution of hexose in sulphuric acid, and thereafter adding to such solution a quantity of phenol substantially less than that necessary to combine with sulphuric acid and with the hexose present to form a phenol sulphonyl hexose, and maintaining sulphonating conditions until a substantial quantity of penta-para-phenol-sulphonyl hexose is formed.

1,460,423. PRESSURE REGULATING AND RELEASING APPARATUS FOR WRINGERS. ALVIN W. KRAHN, Milwaukee, Wis. Filed Mar. 27, 1920. Serial No. 369,183. 7 Claims. (Cl. 68—32.)

3. In a wringer the combination with a frame, a lower roller journaled in fixed bearings therein, a co-operating upper roller journaled in movable bearings adapted to be wholly removed from above the first mentioned roller, a set of springs in releasable connection with the movable roller, means for separately maintaining each of said springs under a desired degree of variable tension independently of their connection with the roller, and swinging devices connected to the movable bearings and having surfaces eccentric to their arc of movement and connectible with said springs and adapted when moved in one direction to progressively increase the tension of said springs and subject the movable roller to such tension to press the same upon its associated roller in said fixed bearings.

1,460,424. RIVETING HAMMER. PHILIP H. LECKINGER, Rochester, N. Y., assignor to High Speed Hammer Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Mar. 17, 1921. Serial No. 452,910. 6 Claims. (Cl. 78—40.)

1. A riveting machine comprising an anvil, a hammer cooperating with said anvil, a helve for operating said hammer and having an opening therein, a bearing pin

mounted to turn in opposite walls of said opening and provided with a transverse opening, a mechanism for operating the helve comprising a rod extending through said

bearing pin, abutments separate from and engaging said bearing pin, and cushions on said pitman cooperating with said abutments.

1,460,425. FLOOR FASTENING FOR DESKS, SEATS, AND CHAIRS. LOUIS H. MCKEE, Trenton, N. J. Filed July 19, 1917, Serial No. 181,480. Renewed May 6, 1918. Serial No. 232,934. 6 Claims. (Cl. 45—137.)

3. A fastening shoe for a desk, etc. formed of a floor plate having cheek pieces rising from the same forming a mortise which is adapted to receive the foot of a side standard of the desk, etc., and a tongue depending from said foot adapted to enter the shoe and be clamped by said cheek pieces and engage the inner face of the adjacent side portions of the shoe.

1,460,426. FOLDING PAPETERIE. BARTHOLOMEW E. MCSHEEHY, Huntingdon, Pa., assignor to J. C. Blair Company, Huntingdon, Pa., a Corporation of Pennsylvania. Filed Oct. 23, 1918. Serial No. 259,417. 3 Claims. (Cl. 281—31.)

1. A foldable papeterie comprising an envelope containing section and a sheet-holding section connected thereto by a hinged portion, the envelope-containing sec-

tion consisting of a back portion, a plurality of open-ended envelope pockets attached to the back portion, the inner open ends of the pockets being located near said hinge portion, and an extension on the back portion overlying the outer open ends and parts of the top faces of the envelope pockets and attached to said faces to close said outer open ends.

1,460,427. EXPANDING FLY CUTTER. JAMES P. MILLS, Detroit, Mich., assignor to Continental Motors Corporation, Detroit, Mich., a Corporation of Virginia. Filed Feb. 24, 1920. Serial No. 360,962. 2 Claims. (Cl. 77—58.)

1. A fly cutter comprising a cylindrical shell, a pair of longitudinally extending bars adustably secured at diametrically opposite sides of said shell, a cutting blade carried by and extending radially from one of said bars, and a gauging projection carried by and extending radially from the other of said bars, said gauging projection, when the cutter is ready for use, being reduced to slightly less radius than said cutting blade, whereby said projection clears the finished portion of the bore.

1,460,428. PUMP AND METHOD OF REGULATING THE SAME. LEWIS FERRY MOODY, Philadelphia, Pa. Filed July 3, 1919. Serial No. 308,607. 22 Claims. (Cl. 103—89.)

1. The method of regulating the flow through a rotary pump comprising increasing the velocity of the inflow in the direction of flow and simultaneously varying the angle of whirl thereof.

1,460,429. BLAST FURNACE. PATRICK J. MORAN, East Cleveland, Ohio. Filed Mar. 17, 1922. Serial No. 544,612. 13 Claims. (Cl. 266—27.)

1. The combination with a blast furnace stack provided with a charging hopper at its upper end; of an

internal metallic shield cylindrical throughout within said stack adjacent said hopper, said shield conforming

to the internal configuration of said wall and spaced therefrom.

1,460,430. LIFE BELT. FRED MORSE, New Haven, Conn. Filed July 7, 1922. Serial No. 573,263. 2 Claims. (Cl. 9—17.)

2. In a device of the character described, a life belt; and means for inflating said life belt when the same has been applied to the body and when both are in the water, comprising a flexible member connected with said life belt and a valve mechanism connected with said flexible member, said latter mechanism having a body with a mouth piece at one end thereof; a valve plug therein adjacent to the mouth piece and having a valve seat upon the inner face thereof, a stem plug closing the end of said body opposite to said mouth piece and having openings therethrough; a valve movably mounted within said body and supported in said stem plug; and a pivotally mounted lever projecting through the wall of said valve plug and body and having contact at its inner end with said valve, whereby the same may be moved off its seat by manipulation of that portion of said lever that projects outside of said body member to permit air to pass thereby from the mouth piece.

1,460,431. ARRANGEMENT OF OIL PUMPS. EUGEN LUDWIG MÜLLER, Munich, Germany. Filed Dec. 22, 1922. Serial No. 608,538. 1 Claim. (Cl. 103—205.)

The combination of a machine bearing, a machine shaft journaled in the bore of the said bearing, an oil

pump casing, a worm shaft journaled in the pump casing, a fixing flange connected with the pump casing and having a surface extending at right angles to the said worm shaft and abutting on the said machine bearing, a pump driving worm wheel engaging with the said worm and enclosed in the pump casing, a centering member associated with an end of the said worm shaft and projecting from the said flange into the bore of the machine bearing, and a connecting member at the end of the worm shaft and projecting into a slot in the machine shaft.

1,460,432. IRONING-BOARD CONSTRUCTION. ROBERT F. NADIG and WILLIAM D. SOMERS, Cleveland, Ohio. Filed Jan. 15, 1921. Serial No. 437,437. 4 Claims. (Cl. 68—10.)

1. In apparatus of the class described, an ironing board, an adjustable supporting member secured to the under-side thereof, a pivoted leg clamping element mounted thereon, a supporting leg slidably engaged in said leg clamping element, a rack member secured to said adjustable supporting member, and a brace arm pivoted to said supporting member, its outer end engaging said rack member.

1,460,433. WORK SUPPORT. WALTER V. NEAL, Malden, Mass., assignor to The United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 9, 1920. Serial No. 387,589. 18 Claims. (Cl. 12—126.)

1. A machine element for sustaining or applying thrust comprising two members adapted to be placed with respect to one another either in a given alinement or at an inclination to such alinement in any direction and in various degrees; said members being in engagement with one another on tangent contact surfaces the degree of relative curvature being such that the line of thrust sustained by said element passes through the point of tangency of said surfaces at any inclination of the members, and means tending to move said members into alinement when the thrust is removed.

- 1,460,434. PAPERHANGER'S SHEARS HOLDER. GEORGE W. NEWBERRY, St. Louis, Mo. Filed Jan. 17, 1923. Serial No. 613,145. 1 Claim. (Cl. 24-13.)

A flexible shears-holder, comprising a leather base having at its upper end an integral flap adapted to be bent or looped around the main body portion of a safety-pin, and a strip of leather secured across the outer face of said leather base to provide a shears-holding loop at about the center of the length of said strip.

- 1,460,435. LOADING MEANS FOR FILM MAGAZINES FOR CAMERAS. HUGO NEWMAN, New York, N. Y. Filed Aug. 9, 1922. Serial No. 580,617. 14 Claims. (Cl. 242-55.)

1. The combination of a film storage container and a film box adapted to be connected thereto to form a light-tight passage from one to the other, and mechanism carried by said film box for transferring the film thereto from the container.

- 1,460,436. COMBINED INDICATOR AND GAUGE. TROY R. NICHOLS, Mexia, Tex. Filed June 21, 1922. Serial No. 569,795. 4 Claims. (Cl. 73-51.)

1. An indicator and gauge for wells comprising a frame, a measuring line connected with the frame and carried by a paying out spool for measuring the depth

to which the device descends within a well casing, a flexible disk detachably connected with the lower end

of the frame, and a plurality of bendable arms extending radially from the frame and engaging the inner periphery of the casing.

- 1,460,437. PACKAGE CONVEYING AND DISTRIBUTING DEVICE. SAMUEL OLSON, Chicago, Ill. Filed Dec. 15, 1916. Serial No. 137,086. 4 Claims. (Cl. 198-186.)

1. In combination with an elongated work table, means for distributing packages thereto, comprising a conveyor belt traveling parallel to said table, and a tripper, comprising a truck mounted to travel longitudinally of the belt and having a loose pulley over which the belt is fed for discharging its load, a laterally-discharging inclined plate on the truck in position to receive such load from the belt and deliver it to the table, said table being laterally spaced from the conveyor belt clear of the path of the tripper, with a longitudinally extended platform bridging such space and sloping downwardly from the side of such path to the table, a second pulley over which the belt is fed from the first and out forwardly from the tripper truck, and means for moving such tripper back and forth over the path of the belt at will, or arresting it at any point in such travel for distributing the material discharged from its plate over the table.

- 1,460,438. SECRET-COMMUNICATION SYSTEM. RALZEMOND D. PARKER, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 26, 1919. Serial No. 347,305. 6 Claims. (Cl. 179-1.)

1. In a transmission system including a sending station and a receiving station the method of maintaining

load circuit, connections forming a circuit between the current source and the load circuit and including a rectifying commutator with a pair of oppositely positioned D. C. brushes and a pair of similarly positioned A. C. brushes between said D. C. brushes, an auto transformer provided with taps for selectively controlling the voltage of the rectified current, and condensers for

eliminating sparking, said condensers forming connections between each pair of said A. C. and D. C. brushes, the fixed terminal of said auto-transformer being connected to the junction of a condenser and an A. C. brush, and a movable terminal of the auto-transformer being similarly connected to the junction of the other A. C. brush and its condenser.

1,460,445. ATTACHMENT FOR LINE-CASTING MACHINES. LEON A. ROBINSON, Peoria, Ill. Filed Nov. 7, 1921. Serial No. 513,339. 15 Claims. (Cl. 199—53.)

1. A line casting machine including in combination with its mold-wheel and a freely movable vise-jaw, a part engaged and moved by the mold wheel, and a second part operated by the first said part adapted to elastically engage and operate said jaw for closing it elastically upon a line of matrices.

1,460,446. RESILIENT WHEEL. ERNEST SCHULTZ, East Melbourne, Victoria, Australia. Filed Dec. 21, 1920. Serial No. 432,284. 2 Claims. (Cl. 152—28.)

2. A resilient wheel comprising, in combination a concave surface formed on the inner surface of a ring sup-

porting a tread, sleeve pistons having central extensions for operating against the tread surface, the pistons on each side being also arranged to operate against inner concave surfaces of rim rings said rim rings being supported by rigid side plates connected to the wheel hub,

radial air cylinders receiving the pistons and disposed around a ring spaced from the hub, said cylinders providing an evenly distributed air pressure to the pistons around the wheel, and means for admitting air into the cylinders whereby to attain the required pressure, for the purposes specified.

1,460,447. CLEANING MACHINE. PASCAL J. SHAMPAY, Chicago, Ill. Filed Mar. 18, 1920. Serial No. 366,927. 12 Claims. (Cl. 68—18.)

1. Cleaning apparatus comprising a receptacle; a cylinder rotatably mounted on a vertical axis in said receptacle and having openings in its walls; an article-to-be-cleaned holder adapted to hold an article in spread-out condition against the inner periphery of said cylinder; and means for raising a cleaning fluid from the bottom of said receptacle and discharging such cleaning fluid centrifugally toward said cylinder.

1,460,448. RUG-HANGING MACHINE. PASCAL J. SHAMPAY, Chicago, Ill. Filed Mar. 17, 1922. Serial No. 544,408. 20 Claims. (Cl. 198—20.)

1. Rug hanging mechanism comprising an elevated carriage, and means for automatically picking up a rug and automatically hanging the latter on said carriage.

1,460,449. AUTOMATIC TRAIN CONTROL. PAUL J. SIMMEN, Buffalo, N. Y. Filed Mar. 26, 1920. Serial No. 369,130. 4 Claims. (Cl. 246—63.)

1. In a train controlling apparatus, in combination; a roadway; a car; a stick relay having a pick-up circuit and a stick-up circuit on the car; mechanical means on the road for breaking the stick-up circuit of said relay and electrical inductive means on the roadway for energizing the pick-up circuit of said relay.

1,460,450. LAST. LEWIS F. SMALL, Braintree, Mass., assignor to C. C. Blake, Incorporated, Boston, Mass., a Corporation of New York. Filed Mar. 29, 1918. Serial No. 225,551. 2 Claims. (Cl. 12—133.)

2. A last having an upper shaping surface and a bottom thereon, said bottom comprising a heel seat and a forepart, the effective tread surface of the heel seat lying in a plane parallel to the planes of any series of lines across the forepart of the last at right angles to the median line thereof.

1,460,451. CONCRETE-PIPE MACHINE. MICHAEL J. SMITH, Tacoma, Wash. Filed July 20, 1922. Serial No. 576,202. 10 Claims. (Cl. 25—30.)

1. A pipe molding machine comprising a main frame, a core carrier pivotally supported in said main frame, means for swinging said core carrier in the frame, comprising a segmental gear on the carrier and a pinion meshing with said gear, a curved core, means for detachably connecting said curved core to the carrier concentric with the axis of the carrier, a swinging mold support coaxial with the core carrier and means for holding said mold support in different positions of angular adjustment.

1,460,452. PRECIOUS-METALS CONCENTRATOR. HENRY F. SNAMISKA, Bremerton, Wash. Filed Jan. 24, 1923. Serial No. 614,624. 4 Claims. (Cl. 88—88.)

1. An ore concentrator comprising a frame, a centrally disposed receiving chute, a sloping sieve disposed under said chute, a dividing platform under said sieve, a vertical conduit beneath the platform, spaced pivoted flumes at either side of said platform adapted to be rocked to discharge either inwardly into the vertical conduit or outwardly, riffles in said flumes and means for rocking said flumes.

1,460,453. CUSHION WHEEL. MYER J. STEIN, Chicago, Ill. Filed May 19, 1920. Serial No. 382,632. 1 Claim. (Cl. 152—32.)

A cushion wheel comprising an inner and outer rim, a plurality of cylinders circumferentially arranged between said rims, alternately arranged pneumatic and spring cushioning means in said cylinders, spring cushioning members disposed between and closing the inner ends of said cylinders, springs secured to said outer rim, one

end of each of said springs being connected to one of said pneumatic cushioning means and the other end be-

ing connected to one of said spring cushioning means to effect the cushioning of said pneumatic and spring cushioning means within said cylinders.

1,460,454. CLUTCH. CARL E. SWENSON, Rockford, Ill., assignor of one-fourth to Levin Faust, one-fourth to Eric S. Ekstrom, and one-fourth to Carl L. Anderson, all of Rockford, Ill. Filed May 2, 1921. Serial No. 466,031. 5 Claims. (Cl. 192-68.)

2. In a clutch of the character described, the combination of frictionally engageable members including a clutch plate having an annular groove, and means for imparting clutch-engaging pressure to said plate including segmental blocks disposed in said groove and having inclined abutting ends so arranged as to circumferentially equalize said clutch-engaging pressure.

1,460,455. BRICK MACHINE. JAMES R. TACKETT, Olive Hill, Ky. Filed Sept. 16, 1922. Serial No. 588,715. 9 Claims. (Cl. 25-45.)

1. In a brick treating machine, a brick press, a brick re-press in spaced relation to each other, a brick support interposed between the presses on which bricks are transferred from one press to the other, horizontally reciprocating brick pushing elements for engaging bricks and pushing them over the support, vertically and longitudinally reciprocating brick carrying elements in op-

erative relation to the support for lifting the bricks from the support and transferring them longitudinally thereof and re-depositing them thereon, and means for operating the brick pushing elements and brick carrying elements oppositely.

1,460,456. ANTIRATTLER. THOMAS W. TITUS, South Haven, Kans. Filed Sept. 8, 1922. Serial No. 586,967. 2 Claims. (Cl. 74-39.)

1. In combination with a steering column including spark and gas rods, an anti-rattler provided with felt portions to allow said spark and gas rods to rotate, but to guard against lateral movement thereof.

1,460,457. LANDMARKER FOR PLANTERS. HARRY R. TRAPHAGEN, Rockford, Ill., assignor to Emerson-Brantingham Company, Rockford, Ill., a Corporation of Illinois. Filed July 8, 1920. Serial No. 394,827. 4 Claims. (Cl. 97-230.)

1. A device of the character described, comprising in combination with a transverse supporting member, a marker bar, a yoke the arms of which embrace said supporting member and extend forwardly therefrom, the marker bar being interposed between the vertically spaced arms of said yoke and pivotally secured thereto by means of a bolt on a vertically disposed axis, whereby the marker bar is adapted to swing horizontally upon said bolt, and means connecting the medial portion of said yoke to said supporting member and permitting the yoke and marker bar to swing vertically about a transverse horizontal axis and to oscillate about a fore-and-aft horizontal axis, such oscillation being limited by contact of the yoke arms against the supporting member.

1,460,458. INTERNAL-COMBUSTION ENGINE. FRANK S. WAHL, North Tonawanda, N. Y. Original application filed Nov. 30, 1917, Serial No. 204,571. Divided and this application filed Mar. 27, 1920. Serial No. 369,412. 2 Claims. (Cl. 123-119.)

1. An internal combustion engine comprising a fuel supply conduit, a movable valve for controlling said

conduit, and means for adjusting the extent of opening of said valve, comprising a spring connected with said valve, a shell containing two chambers which are separated by a flexible diaphragm which is connected with said spring, one chamber being open to the atmosphere and the other closed to the atmosphere, and a thermostatic element responsive to changes in the temperature of the engine and operatively connected with said valve.

1,460,459. BARREL-MAKING MACHINE. JOSEPH L. WALKER, Baton Rouge, La., assignor to The K-D Barrel & Hamper Co., Baton Rouge, La. Filed Oct. 21, 1922. Serial No. 596,035. 18 Claims. (Cl. 147—1.)

1. In a barrel making machine a former, a carriage, means cooperating with the former for gripping one end of a hoop strip, means on the carriage for gripping the other end of the hoop strip, means for rotating the former to wrap the hoop strip thereon and actuate the carriage, and means for automatically releasing the hoop strip from the carriage.

1,460,460. MACHINE FOR MAKING BARRELS. JOSEPH L. WALKER, Baton Rouge, La., assignor to The K-D Barrel & Hamper Co., Baton Rouge, La. Filed Dec. 19, 1922. Serial No. 607,828. 14 Claims. (Cl. 147—1.)

1. In a barrel making machine the combination with a former, of an endless carriage, means on the carriage for gripping hoop strips at one end, rotatable means cooperating with the former for gripping the hoop strips at the other end, and for causing it to conform to the former, and means for actuating the former and the rotatable means to bend the strips upon the former and actuate the carriage.

1,460,461. SANITARY AND TEMPERATURE-INSULATING JACKET FOR MILK CANS. WALTER A. WEST, Elkhorn, Wis. Filed Oct. 4, 1920. Serial No. 414,419. 2 Claims. (Cl. 220—9.)

1. A jacket adapted to enclose a milk can or the like, made of an inner and outer layer of waterproofed textile fabric and a loosely-interposed layer of paper, all the layers being secured together at marginal and seam lines; whereby air layers are retained between the waterproofed layers and the paper layer, the layers being all of such thinness and looseness of relation to each other as to render the jacket as a whole flexible and collapsible.

1,460,462. SYSTEM OF CONTROL FOR THE CARBURETING AND IGNITING DEVICES OF INTERNAL-COMBUSTION ENGINES. WILLIAM G. WILL, Fairview, Ill. Filed July 19, 1918. Serial No. 245,788. 6 Claims. (Cl. 123—102.)

1. A system for automatically controlling the ignition and fuel of an internal combustion engine, which comprises a fly wheel having a rotatable element mounted transversely thereof, a contact and a switch arm carried by said member, a plurality of spaced and insulated rings on said fly wheel and engageable by the switch arm, said contact engaging constantly with one of the rings, electric circuits including a source of electric energy connected with the rings, means for operating said member and therefrom the switch, and electro-magnetic devices for automatically controlling the ignition circuit and the valve of the carburetor.

1,460,463. GRAIN SEPARATOR. ORA WOOD WILLIAMS, Minneapolis, Minn. Filed Oct. 31, 1921. Serial No. 511,727. 13 Claims. (Cl. 130—18.)

1. A separator of the kind described comprising a rotary drum provided with internal pockets, said pockets

having perforated bottoms, and an air tube arranged to blow a downward blast against the interior of the drum

on the rising side thereof approximately parallel to the inner surface of the drum.

1,460,464. TOURING AND CAMPING CAR. ROLAND A. WILSON, Tampa, Fla. Filed Oct. 1, 1921. Serial No. 504,628. 12 Claims. (Cl. 296—23.)

1. In mechanism of the class described, a berth comprising a frame formed of substantially rectangular inner and outer bent wood members in superposed relation, the inner surface of the inner member being substantially flush with the outer surface of the outer member, means for securing said members together, a fabric stretched across the lower face of the outer member and a webbing stitched to the fabric and secured to the upper face of the inner member.

1,460,465. SAFETY MEANS FOR CUTTING MACHINES. GEORGE H. WOOD and FRED L. CAPEN, Boston, Mass. Filed Sept. 11, 1920. Serial No. 409,677. 6 Claims. (Cl. 192—131.)

6. A cutting-machine comprising a movable cutter; a cutting bed; operating mechanism having provisions for depressing and raising the cutter; a cutter-starting element formed and arranged to be grasped by one hand of an operator; automatic means normally locking said

starting element in an inoperative position, said automatic means including an unlocking element formed and arranged to be grasped and moved by the other hand of the operator to unlock the starting element, the arrangement being such that the use of both hands of the operator is required to cause the operation of the machine; a work-supporting table adjacent to the cutting bed; and a normally raised and inoperative clamping member adapted to confine the work on said table, means being provided whereby the operator may depress said member to render the same operative while both hands are employed in causing the operation of the machine.

1,460,466. LOADING AND UNLOADING APPARATUS. JAMES ALVIN WORSHAM, Maroa, Ill. Filed Mar. 6, 1920. Serial No. 363,660. 1 Claim. (Cl. 302—12.)

In a portable loading and unloading device, a movable supported frame, a blower mounted upon the frame, a pneumatic tube through which the blower discharges, said pneumatic tube being provided with an inlet through the upper side thereof a chute extending upwardly from the inlet, an inclined conveyor carried by the frame and communicating at its upper end with the chute, and a hopper swingingly supported at one end upon the frame with the attached end thereof in communication with the inclined conveyor, said hopper being adapted for movement from a position in which it is substantially horizontally disposed and in which the free end thereof is positioned rearwardly of the frame to a position in which the free end thereof is positioned above the frame.

1,460,467. RAILWAY TIE. ORAN YARNELL, Salt Lake City, Utah. Filed Jan. 15, 1923. Serial No. 612,789. 1 Claim. (Cl. 238—286.)

In a railway tie the combination of a channel made from sheet metal having portions struck from the general plane to form drain ports and soil engaging lugs; a cushion block in each end portion of said channel; angle straps bent to fit the upper face and end of each cushion block; bolts passed through the sides of said channel and said straps adjacent the ends of said cushion blocks to hold said blocks in place; and nuts screwed on said bolts to draw the sides of said channel against said blocks.

1,460,468. BEAM SUPPORT. GEORGE ADSIT, Paterson, N. J., assignor to Benjamin Eastwood Company, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 27, 1922. Serial No. 539,431. 2 Claims. (Cl. 54—10.)

1. Beam supporting means including a bearing, a revoluble support therein having a laterally open recess extending to its end and within the bearing and adapted to receive the beam trunnion, the bearing having a slot

with which the recess is adapted to register on revolving the support, and a retaining member revoluble in and around the axis of the support and having a lateral

recess forming a seat for the beam and adapted on revolving said member to stand in or out of registry with the recess of the support.

1,460,469. COMPUTING MACHINE. LOUIS L. ANSART, New York, N. Y., assignor to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed Jan. 25, 1921. Serial No. 439,723. 22 Claims. (Cl. 235-60.)

1. In an algebraic computing machine, in combination, dials having figures to represent positive values, and other figures to represent negative values, each dial having one set of one kind of figures and two sets of the other kind, and means whereby attention may be directed to a row of figures of the first set to give a correct reading of a result corresponding to the kind of figures in said set, and whereby attention may be directed to a row of figures of the other two sets from which results of the corresponding kind may be read.

4. In an algebraic computing machine, in combination, a series of dials, each having a series of positive digits and two series of negative digits, said digits arranged one under another upon said dials, so that, on one side of each positive digit, there is a negative digit complementary to the base nine, and on the other a negative digit complementary to the base ten, and means to indicate a row of digits from which results may be read, a positive result or the complement of a negative result being read from the positive digits, and, in case of the latter, the correct negative result being read from the negative digits complementary to the base nine until the last significant figure of the complement of the negative result is reached, and then from the negative digits complementary to the base ten.

1,460,470. VAPORIZER AND MIXER FOR INTERNAL-COMBUSTION ENGINES. JOSEPH ASKINS, Lima, Ohio. Filed May 22, 1922. Serial No. 562,781. 1 Claim. (Cl. 48-180.)

In an internal combustion engine, the combination with an engine including a cylinder having an intake

port and an intake manifold communicating with the cylinder, of a fuel vaporizer comprising a supporting gasket disposed between the intake manifold and the intake port, a pair of foraminous semi-spherical bodies secured to said gasket, one of said bodies being formed of a finer wire mesh than the other body and disposed entirely within the intake portion, the other body being disposed entirely within the intake manifold.

1,460,471. LIQUID METER. ROBERT S. BASSETT, Buffalo, N. Y. Filed June 1, 1921. Serial No. 474,150. 4 Claims. (Cl. 73-98.)

1. In a liquid meter, the combination with a gear plate, of a driven pinion shaft bushing engageable with and supported by the gear plate, and comprising a metallic shell, an internal insert supporting flange and a bearing insert supported by said flange substantially as and for the purpose described.

1,460,472. DETACHABLE KEYHOLE SEAL FOR PADLOCKS. THOMAS W. BENSON, Philadelphia, Pa., assignor to Miller Lock Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 13, 1921. Serial No. 469,232. 4 Claims. (Cl. 70-97.)

1. A plate for sealing the keyhole of a padlock, said plate having a portion engaging the lock casing and having a perforated portion through which one leg of the shackle is passed to hold the plate in position to prevent the insertion of a key in the keyhole.

1,460,473. FLUID-FUEL BURNER. JOHN A. BISHOP, Clearwater, Fla. Filed June 7, 1921. Serial No. 475,657. 9 Claims. (Cl. 158-53.)

9. The combination of a fuel conductor having a heat absorbing surface, said conductor terminating in a nozzle arranged to direct its discharge adjacent said heat absorbing surface, a needle valve for controlling the flow of fuel from said nozzle, a pipe adapted to convey an

atomizing fluid into said nozzle, means in said pipe for controlling the flow of said atomizing fluid to said nozzle, and a connection between said pipe and a point in said fuel conductor distant from said nozzle and adapted to divert from said pipe through said conductor for cleaning purposes.

1,460,474. INTERNAL-COMBUSTION ENGINE. WILHELM B. BRONANDER, Montclair, N. J. Filed Nov. 17, 1919. Serial No. 338,694. 22 Claims. (Cl. 123—51.)

12. An internal combustion engine comprising a pair of cylinders provided with ports, a passage interconnecting said cylinders intermediate the ends thereof, a pair of pistons in each cylinder, a shaft having crank pins of unlike angularity, guides transverse to the shaft, connecting rods between the crank pins and the guides, transverse projections from opposite sides of each connecting rod near its guided end, links between the pistons and said projections, said pistons being arranged to open and close the cylinder ports, and means for injecting oil into the cylinders between the pistons.

1,460,475. INTERNAL-COMBUSTION ENGINE. WILHELM B. BRONANDER, Montclair, N. J. Filed Sept. 16, 1920, Serial No. 410,624. Renewed Dec. 11, 1922. 12 Claims. (Cl. 123—53.)

1. An internal combustion engine comprising a pair of cylinders with like ends thereof connected, an inlet

port in one cylinder, an outlet port in the other cylinder, pistons in the cylinders arranged to control said ports, a crank shaft, a connecting rod having a cross arm operatively connected with the pistons and arranged to cause said pistons to move out of step to open and close said ports in desired sequence, a third cylinder connected at one end with the connected ends of the first mentioned cylinders, a piston in the third cylinder and a connection between the third cylinder piston and the crank shaft.

1,460,476. WELDING COMPOUND. JAMES R. CAMPBELL and JAMES L. REYNOLDS, Scottdale, Pa. Filed Oct. 7, 1921. Serial No. 506,113. 3 Claims. (Cl. 148—25.)

3. A welding compound consisting of 5 to 10 per cent of oxide of iron, 15 to 30 per cent of black manganese dioxide, and 80 to 60 per cent of borax, all commingled and mixed together to form an even mixture.

1,460,477. SEAMLESS STOCKING AND METHOD OF MAKING SAME. WILLIAM H. CARTER, Needham Heights, Mass. Filed Feb. 3, 1922. Serial No. 533,834. 11 Claims. (Cl. 66—4.)

1. As a new article of manufacture, a seamless or circular knit stocking having the heel thereof narrowed and widened, the corresponding ends of the narrowing courses and the corresponding ends of the widening courses being connected by floated threads.

1,460,478. DEVICE FOR REPLACING FUSE WIRE AND FOR INDICATING BLOWN-OUT ELECTRIC CIRCUITS. PHIL DAVIES, Woollahra, New South Wales, Australia. Filed Dec. 9, 1919. Serial No. 343,588. 10 Claims. (Cl. 200—125.)

1. In a device for replacing fuse wire and for indicating blown out electric circuits, a spool and spool box adapted to carry a coil of fuse wire, two curved arms integral with the spool box, one of said arms being provided with a recess, a corresponding tooth to fit into the recess, and means on the arms through which the fuse wire may be threaded and held stretched from one arm to the other for the purpose herein described.

1,460,479. FOLDING LADDER. ALBERT S. DIXON, Los Angeles, Calif. Filed Apr. 18, 1922. Serial No. 555,317. 5 Claims. (Cl. 228—36.)

1. A second story landing having a floor and a railing extending upwardly from the floor, a folding ladder

extending downwardly from above the railing and against the outside of the railing, and a rigid ladder extending

from the floor to the top of the railing so that a person may climb up the rigid ladder over the railing to the folding ladder.

1,460,480. RADIATOR-REPAIR MACHINE. MARTIN GERBER, Iowa City, Iowa. Filed Sept. 11, 1922. Serial No. 587,606. 5 Claims. (Cl. 73—51.)

1. In a radiator repair machine, the combination with a stand, of a tank carried by the stand, a frame constructed to enter the tank, means for raising and lowering the frame and for holding it in intermediate positions, and a turntable ring provided with cross-pieces and carried by the frame and movable with the said frame into and out of the tank.

1,460,481. FOUNTAIN PEN. DAVID A. GLUSHAK, Washington, D. C. Filed Nov. 9, 1921. Serial No. 514,004. 2 Claims. (Cl. 120—47.)

1. In a fountain pen, the combination of an outer barrel having an annular shoulder projecting interiorly near its end, an inner barrel slidably mounted in the outer barrel, said inner barrel having an annular shoulder near its inner end projecting outwardly and adapted to abut against the shoulder of the outer barrel, means

for the escape of air from the space between the barrels on the outward stroke of the inner barrel, a rod affixed

to the inner surface of the end of the inner barrel and extending longitudinally of said barrel for approximately the entire length and spaced from the walls of the barrel.

1,460,482. DRAFTING INSTRUMENT. CHARLES FREMONT GOLDEN, Denver, Ind. Filed Aug. 30, 1922. Serial No. 585,188. 1 Claim. (Cl. 33—75.)

In an instrument of the class described, a main member comprising a body and a head, the head having a protractor scale and an arm pivoted to the main member and cooperating with the body to define angles, the arm being provided with laterally offset edges forming subdivisions of the unit of the protractor scale.

1,460,483. LIFE BUOY. GUSTAVE HAACK, Madison, Wis. Filed Jan. 21, 1922. Serial No. 530,953. 1 Claim. (Cl. 9—17.)

In a life buoy, a metal tubular air chamber of convenient form to be secured to a person across and in

front of the body just below the neck, thence down both sides and across the waist and connected at the lower ends by a tubular coupling, in which is located an air admitting check valve, in combination with adjustable metal bands disposed around the outside of the air chamber for attaching neck, and waist straps, for securing the buoy to a person.

1,460,484. COMBINED PAIL AND STAND. ALBERT GEORGE HARRINGTON, Birmingham, Mich. Filed July 11, 1922. Serial No. 574,216. 1 Claim. (Cl. 248—41.)

In combination, a pail having a plurality of grooves or channels formed longitudinally thereof and in its outer surface, a stand comprising a frame, open at its upper end and adapted to telescopically receive the pail, cross members adjacent the bottom of the frame adapted to support the pail, studs carried by said frame one for each of the grooves, said studs being adapted to permit free upward and downward movement of the pail and when said pail is moved upwardly and above said studs and rotated to bring the same out of alignment with the grooves, said studs being adapted to engage the bottom of the pail and support the same in an elevated position and within the frame.

1,460,485. APPLIANCE FOR PLAYING AN IMPROVED CARD GAME. ALBERT EDWARD HARVEY, Streetley, England, assignor of one-half to George Edward Folkes, Birmingham, England. Filed Dec. 31, 1919. Serial No. 348,714. 1 Claim. (Cl. 46—25.)

A game set comprising two packs of cards, one pack consisting of a plurality of stock cards having designated thereon the par value of the stock, the other pack consisting of a plurality of quotation cards, said quotation cards determining the market value in play of the stock cards.

1,460,486. AUTOMATIC BASTER FOR COOKING. HELEN IRENE HARVEY, Butte, Mont. Filed June 19, 1922. Serial No. 569,206. 8 Claims. (Cl. 53—6.)

1. A basting attachment for roasting pans comprising a container having means whereby it may be supported

above the roasting pan, a perforated outlet pipe operatively connected to the container and discharging upon

the material in the roasting pan, a valve controlling the discharge from said outlet pipe, and means automatically causing the opening of the valve at uniform intervals

1,460,487. ROTARY COMPRESSOR, EXPANDER, MOTOR, AND PUMP. WILFORD J. HAWKINS, Montclair, N. J. Filed Sept. 16, 1921. Serial No. 501,073. 4 Claims. (Cl. 103—136.)

1. In a device of the character described, a rotor casing, an upper casing member, a lower casing member, a plate between said upper casing member and said rotor casing, a plate between said lower casing member and said rotor casing, intake ports and outlet ports in each of said plates, intake connections and outlet connections on each of said casing members, and a base member.

1,460,488. PROCESS OF AND APPARATUS FOR MAKING SHEET GLASS. WILLIAM E. HEAL, Washington, D. C. Filed Jan. 17, 1921. Serial No. 437,909. 7 Claims. (Cl. 49—3.)

7. An apparatus for forming sheet glass comprising a receptacle adapted to receive a body of powdered, fin-

ished glass, a movable member arranged therein, means for heating said member, and a pair of spaced rods ar-

ranged at the top of said tank, said rods being capable of being heated for polishing the sheet glass formed.

1,460,489. SHOE FOR DISK HARROWS. CLARENCE M. JACOBS, Butler, Ky. Filed May 26, 1922. Serial No. 563,860. 5 Claims. (Cl. 278-87.)

1. The rear clevis having a socket to be secured to the tongue of a disk harrow or the like, said rear clevis embodying a substantially vertical sleeve, a substantially vertical shaft pivotally mounted within the sleeve, a ground engaging shoe carried by the lower end of the shaft and being longitudinally curved and increasing in curvature forwardly, a front clevis embodying a substantially vertical plate having a pair of strap ears receiving the shaft above and below the rear clevis, said substantially vertical plate having vertically spaced means for connection with a draft appliance which may be attached to the plate at different elevations, and means for effecting a clamping engagement between the strap ears and the substantially vertical shaft whereby the shaft is held against turning movement under ordinary working conditions and may turn when the shoe is subjected to an abnormal force tending to shift it laterally.

1,460,490. GAS SCRUBBER. HORACE G. JOHNSTON, Corsicana, Tex., assignor to Genevieve Johnston, Corsicana, Tex. Filed July 16, 1920. Serial No. 396,665. 7 Claims. (Cl. 261-98.)

1. In a gas scrubber, a container adapted to inclose scrubbing material and having a gas outlet at one end, a gas inlet pipe entering said container at the outlet end continuing therinto and opening adjacent at the opposite end, baffling means in the pipe, and means for discharging water onto said baffling means and into the container around said pipe.

7. In a gas scrubber adapted to remove oil, tar and other liquids from gas produced from coal or the like, a container, a drain pipe so disposed as to maintain a constant level water seal in said container, a gas washing and condensing conduit entering said container and extending downward therein, said conduit having an en-

larged lower discharge end below the water level adapted to permit the issuing gas to pass upward in relatively small bubbles well distributed throughout the

water, a gas outlet, means for showering scrubbing water within the container around the inlet conduit and means for admitting water direct to said conduit.

1,460,491. CONVEYING AND SCREENING APPARATUS. EUGENE E. LANDAHL, Oak Park, Ill. Filed Nov. 22, 1920. Serial No. 425,881. 18 Claims. (Cl. 83-56.)

1. Conveying and screening apparatus comprising, means providing a traveling conveying and screening surface inclined upwardly and then downwardly between a point of feed and a point of discharge whereby material carried by said surface will be agitated and a conveyor-trough for screened material under said conveyor and screening surface and extending throughout the area of upward and downward inclination of said surface.

1,460,492. COMMUNICATION SHEET. HARRY L. LATZ, Atlantic City, N. J. Filed Mar. 31, 1920. Serial No. 370,140. 2 Claims. (Cl. 283-56.)

1. A communication sheet provided with a blank space adapted to receive a communication inscription, a border for said space initially produced upon said sheet and defining a major portion thereof, said border including a plurality of pictorial representations, at least one of which has associated therewith a blank form intended to be subsequently filled in, by the writer of the communication, with an inscription to complete the design of the representation and its associated form, said representation and the words of said form being of such a character as, together with the inserted inscription, to have a definite meaning with respect to the addressee,

and the matter initially produced upon said sheet being of a general appearance such as to facilitate the filling in of said blank form with said subsequent inscription in

a manner to bear a close similarity in appearance to said initial inscriptions, whereby the completed whole has the appearance of having been initially produced upon said sheet.

1,460,493. AGITATOR. EDWIN S. LEINAN, Fargo, N. Dak. Filed Sept. 5, 1922. Serial No. 586,234. 7 Claims. (Cl. 259—139.)

1. An agitator comprising a support, an inner plate shaped dasher, an outer loop shaped dasher, an intermediate loop shaped dasher, and operating means for said dashers.

1,460,494. RESILIENT WHEEL. JAMES F. MILLER, Minden, La. Filed July 22, 1922. Serial No. 576,748. 5 Claims. (Cl. 152—50.)

1. In a wheel, the combination of a hub, a rim having a central annular rib upon its inner circumference, spokes consisting of bowed resilient bands having their ends secured in the hub and their outer intermediate bowed portions bearing against the inner circumference of the rim and against opposite sides of the central rib thereon, and

clips fixed to the flanges of the rim and extending radially inward on the outer sides of said flanges and trans-

versely to the inner circumference of the rim and the bowed portions of the spokes and secured to the sides of the central rib upon the rim.

1,460,495. CURRENT MOTOR. HANS P. MOLANDER, Long Beach, Calif. Filed Aug. 11, 1921, Serial No. 491,395. Renewed May 16, 1923. 4 Claims. (Cl. 170—82.)

4. A current motor comprising: a frame adapted to be fixed over a moving stream of water; two bearings concentric about a single axis, one bearing fixed to one side of said frame and the other bearing fixed to the other side of said frame; two swinging arms, one pivoted on one of said bearings and the other pivoted on the other of said bearings; a shaft situated at the free end of said swinging arms; bearings carried on said swinging arms, in which said shaft is free to turn; a paddle wheel turning about the axis of said shaft; a curved imperforate current deflector carried between said arms and moving therewith and so shaped as to direct the force of said stream against the periphery of said wheel; and side wings so placed as to confine said force within definite channels, said deflector consisting of a sheet of material extending entirely across the face of the wheel and having any transverse lines therein parallel with the axis of the wheel.

1,460,496. CAR ROOF. GEORGE C. MURRAY, Chicago, Ill. Filed Nov. 10, 1917. Serial No. 201,264. 6 Claims. (Cl. 108—5.4.)

1. In a car roof structure, a channelled member extending transversely of the car with its side walls directed upwardly and having flanges directed inwardly from the upper edges of said side walls, roof sheets overlapping said channelled member and seating on said

flanges, a cover plate mounted over said channelled member and overlapping said roof sheets, and means at intervals across the car for clamping said roof sheets between said cover plate and said flanges.

1,460,497. DRAFTING DEVICE. OLIVER E. NOBLE, Manhattan, Kans. Filed Apr. 14, 1922. Serial No. 552,697. 8 Claims. (Cl. 33—26.)

1. A device of the class described comprising a base, a rotatable plate on the base, a slidable frame carried by the rotatable plate, a slidable tool carrier on the slidable frame, means for fixing the rotatable plate rigid with respect to the base, and means for fixing the slidable frame rigid with respect to its plate.

1,460,498. COMBINED SHOCK ABSORBER AND OILING ATTACHMENT FOR VEHICLE SPRINGS. JOHN PEYREB, Salem, Oreg. Filed June 12, 1922. Serial No. 567,730. 3 Claims. (Cl. 267—50.)

1. An oiling attachment for vehicle springs comprising a strip having oil supplying means on its inner face with its ends rolled to form attaching elements, and an open loop formed intermediate the ends of said strip to permit its longitudinal yielding to facilitate its attachment.

1,460,499. CONTAINER FOR FILES. FAYETTE RUMSEY PLUMB, Philadelphia, Pa. Filed May 28, 1921. Serial No. 473,299. 4 Claims. (Cl. 206—46.)

1. A package of files or the like, consisting of a plurality of plates each having a face provided with inter-

grally formed parallel grooves and a plane back, said sheets being superposed face to back, files occupying said grooves, a folder enveloping one end of said plates and files, and an open-ended sheath surrounding the whole.

1,460,500. PLANT FOR THE SUPERVISION OF THE CIRCULATION LUBRICATION ON POWER CARS. MAX RALL, Stuttgart, Germany, assignor to Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Filed May 26, 1922. Serial No. 563,992. 2 Claims. (Cl. 177—311.)

2. In a device of the class described, the combination, with an engine, an oil circulating system for said engine, and means driven by the engine for forcing oil under pressure through said system, of an electric lamp, a dynamo operated by said engine, an electric circuit connected directly to the terminals of said dynamo, said lamp being connected in said circuit, and means in said oil circulating system including a diaphragm for maintaining the electric circuit open when the oil in said system exceeds a certain pressure and to allow the circuit to close when the oil falls below a certain pressure.

1,460,501. LIGHT-PROJECTING APPARATUS. JAKOB RITTER, Basel, Switzerland. Filed June 3, 1921. Serial No. 474,704. 2 Claims. (Cl. 88—24.)

1. In a light projecting apparatus, the combination with a lamp of a catoptric light condenser and a dioptric light condenser, said dioptric light condenser comprising a liquid lens near to the lamp with a forward and rearward annular lenticular zone and a rear glass lens at a substantial distance beyond the liquid lens and being so arranged as to concentrate the rays from the catoptric light condenser through its annular lenticular zone to the said rear glass lens, substantially as and for the purpose described.

1,460,502. CHART HOLDER. THOMAS J. RUDEKILL, Madison, Wis., assignor to Scanlon-Morris Co., Madison, Wis. Filed Oct. 7, 1922. Serial No. 593,157. 1 Claim. (Cl. 129—35.)

In a chart holder, a back and knuckles formed from sheet aluminum, a pin disposed through the knuckles, a

torsion spring mounted on the pin between the knuckles, one end of the spring resting against the back, and the other disposed in a groove on the under side of a clip, in

combination with a clip so mounted on the pin that the weight of the holder when suspended from a hook in the wall, will force the front edge of the clip towards the back of the holder, as described and explained.

1,460,503. DOOR-CORE-ASSEMBLING DEVICE. EDWARD SATZGER, Sr., Cincinnati, Ohio. Filed Aug. 30, 1922. Serial No. 585,157. 3 Claims. (Cl. 144—281.)

1. In a device of the character described, a table formed of interspaced members, and a reel having interspaced arms thereon, set so as to pass between said members substantially for their full length and means for supporting the table members without interfering with the complete revolution of the reel, said interspaced arms having members thereon constituting lateral supports for a composite board structure at right angles to the arms.

1,460,504. ANTISKID DEVICE. OTTO C. SCHAEFER, Hoboken, N. J. Filed Feb. 8, 1923. Serial No. 617,691. 1 Claim. (Cl. 152—14.)

An anti-skid device comprising articulated links, and ellipsoidal rollers bored longitudinally with semi-spherical cavities at their ends in which the eyes of the links are received to permit the rollers to lie in a curve conforming to the transverse curve of the tread.

1,460,505. WHEELED GUN CARRIAGE HAVING DIVERGIBLE TRAILS. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint Stock Company of France. Filed Nov. 27, 1922. Serial No. 603,699. 5 Claims. (Cl. 89—40.)

1. A wheeled gun carriage comprising, in combination, an axle, a block pivotally secured thereto having a longitudinally extending bearing portion, a pair of divergible trails adapted to rock about said portion, a carriage head pivotally secured to said portion, a mount pivotally secured to said head, a pedestal having a pivot pin, means

pivotally securing said pedestal to said mount, and means for moving said pivot pin to a vertical position from any inclined position.

3. A wheeled gun carriage comprising, in combination, an axle, a transverse member having a longitudinally extending bearing portion, a bundle of leaf springs interposed between said member and axle, a pair of divergible trails adapted to rock about the longitudinal axis of said portion, a carriage head pivotally mounted on said portion, and means for moving said carriage in a vertical plane parallel to said axle about said portion.

1,460,506. TIRE-CHAIN-MOUNTING DEVICE. JOSEPH SCHNEIDER, Cincinnati, Ohio. Filed Jan. 4, 1921. Serial No. 434,949. 4 Claims. (Cl. 152—14.)

1. In a device of the character described the combination with a chain having a clamping element for engaging over a tire, of a container, and a slidable member therein for moving the chain, a rod on which the slidable member moves and a spring on the rod, a latch in the slidable member adapted to rest on the rod and a spring to retract the slidable member, and automatic means for lifting the latch from the rod in the outer position of the sliding member.

1,460,507. BLOTTING INKSTAND. JACOB GEORGE SCHWARTZ, Rockingham Township, Scott County, Iowa. Filed Feb. 2, 1922. Serial No. 533,511. 5 Claims. (Cl. 120—1.)

1. In a blotting inkstand, a pair of end braces having shaped bottoms, perpendicular ends, boxing means within the upper portion of their ends, other short brace means provided at upwardly disposed ends of the end braces, the last mentioned brace means being provided with vertical nib means suitable for securing the said end braces to the ends of a pair of sill members, which with said end brace members form a part of the frame work of said blotting-inkstand.

1,460,508. HYDRAULIC EXPANDING BAR. DAVY VANCE SPEKMAN, Denver, Colo. Filed July 1, 1921. Serial No. 481,810. 7 Claims. (Cl. 138—10.)

3. In a hydraulic bar having a plurality of chambers arranged at spaced intervals, a cylindrical cup shaped wall member separating each chamber into two compartments, two oppositely arranged cup shaped main pistons telescopically connected with said wall member, a gasket connected to the bottom of said wall member and cooperating with the inside of one of said main pistons, a gasket carried by the other main piston and cooperating with the inside of said wall member, a tubular member secured to the bottom of said wall member and having one end extending into one compartment, the other end being provided with an inwardly directed flange, an auxiliary piston in said tubular member and lost motion connection between said auxiliary piston and one of said main pistons, a second auxiliary piston in said tubular member, a stem of non circular cross section attached to said last named auxiliary piston, a disc connected to the other end of said stem, a disc-like member slidably connected to said stem between said disc and piston, said disc-like member being firmly secured to the open end of said tubular member and lost motion connection between said disc and the other main piston whereby the latter will move the second named auxiliary piston as it approaches the end of its stroke.

1,460,509. VANITY BOX. RALPH WM. WILSON, New York, N. Y. Filed Oct. 6, 1922. Serial No. 592,706. 2 Claims. (Cl. 132—83.)

1. In a device of the character described, the combination with a box having an inner and outer cover hinged at opposite sides of the box, a powder compact in said box, a powder puff for said powder, a mirror mounted inside of the inner cover, a vertical wall on said cover, adapted to telescope inside the vertical wall of the powder compartment of the box, a flange on said inner cover adapted to engage and abut the upper edge of the side wall of the box, an outer cover having peripheral walls which telescope the outside of the side walls of the box and abut the shoulder formed thereon, the flange on the inner cover being fitted to the inside of the wall of said upper cover, a rouge compact on the inside of said outer cover.

1,460,510. PRESERVING COMPOUND FOR PISTACHIO NUTS. SALIM F. ZALOUM, New York, N. Y., assignor to Royal Nut Company, a Corporation of New York. Filed June 21, 1922. Serial No. 569,972. 4 Claims. (Cl. 99—1.)

3. A compound for application to pistachio nuts comprising the following ingredients in substantially the

proportions specified, namely, 100 pounds sodium chloride, 2 pounds gum arabic and 40 gallons of water.

4. The method of treating pistachio nuts which consists of spraying them with an aqueous solution of sodium chloride and gum arabic while the nuts are passing through a roaster.

1,460,511. HEADLIGHT. JAMES M. RICHARDSON, Highland Park, Mich., assignor to Tulite Auto Bulb Company, New York, N. Y., a Corporation of Michigan. Filed Aug. 28, 1919. Serial No. 320,406. 2 Claims. (Cl. 240—48.6.)

1. A vehicle head light comprising a reflector having a focal center, a bulb having two filaments, the first of which is located approximately at the focal center and the second a distance from the first but in approximately the same vertical plane, said bulb being frosted over its front surface and back sufficiently far to diffuse all direct rays visible from the front and all reflected rays except enough to make a small central concentrated beam of light.

1,460,512. REFRIGERATOR CAR. GEORGE T. ROHRBACK, Buffalo, N. Y. Filed Dec. 26, 1922. Serial No. 608,902. 3 Claims. (Cl. 62—19.)

1. In a refrigerating car, the combination of a tank having an outlet, a valve controlling the outlet, and including an upright casing, a valve seat therein, a valve plug for said seat, a valve stem connecting with said plug and projecting upwardly through the casing, an overhead support, a fulcrum bracket on the support and having upwardly opening bearings with a passage between them, a lever bifurcated at one end, having integral trunnions mounted in the bearings and an integral pintle between the furcations, a hook rod for detachably connecting the pintle and the valve stem and resilient means for seating said valve and for preventing accidental disengagement of said hook rod.

1,460,513. ANTIRATTTLING BUSHING. DAVID E. ROSS, La Fayette, Ind., assignor to Ross Gear & Tool Company, La Fayette, Ind., a Corporation of Indiana. Filed May 24, 1922. Serial No. 563,422. 19 Claims. (Cl. 74—39.)

1. A bushing adapted to be mounted in the casing of a steering post and surround the steering shaft and having spring fingers adapted to engage the steering shaft, for the purpose specified.

1,460,514. CAN-STERILIZING APPARATUS. RICHARD SEGGERMAN, Fairbury, Nebr. Filed June 13, 1921. Serial No. 477,077. 3 Claims. (Cl. 141—7.)

1. A device of the class described comprising a wash tank and a steam generator spaced one from the other, a table bridging the gap between them and supported by the wash tank and steam generator, a funnel-shaped can-receiving member in the table, a steam nozzle extending through the funnel shaped member and connected to the steam generator, and means for controlling the steam admitted to the steam nozzle.

1,460,515. BEARING AND METHOD OF MAKING SAME. HARRY SELKER, Cleveland, Ohio, assignor to The Buckeye Brass and Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 29, 1921. Serial No. 504,147. 4 Claims. (Cl. 29—149.5.)

1. A method of manufacturing bearings consisting in, preparing the inner surface of a shell-like metallic

supporting member for receiving and retaining a babbit coating, by forming longitudinal slots therein, and covering with amalgamating material; and, then, locating the babbit.

1,460,516. BUILDING CONSTRUCTION. MILTON ROY SHEEN, Philadelphia, Pa. Filed Apr. 30, 1920. Serial No. 377,756. 6 Claims. (Cl. 81—45.)

1. A building block having opposite end edge surface, converging side edge surfaces adjacent to each of said end surfaces, a tongue formed on each side edge surface extending throughout a portion of the length of the said side edge surface, and said block having a groove formed in each side edge surface extending throughout the portion thereof not occupied by the tongue, said blocks adapted to be forced endwise into a structure formed of similar blocks placed edge to edge.

1,460,517. ELECTROMAGNET. WILLIAM C. STEVENS, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 22, 1918. Serial No. 230,014. 9 Claims. (Cl. 175—34.)

1. An electromagnet comprising a winding and relatively movable magnetic parts to be attracted thereby axially thereof, one of said parts having portions of different cross sectional areas adapted to provide in conjunction with the other of said parts a magnetic path for a portion of the magnetic flux of said winding including a plurality of air gaps bearing a series relation and to also provide a magnetic path for another portion of the magnetic flux of said winding exclusive of certain of said air gaps.

1,460,518. LOCK. PAUL SZYDLOWSKI, Detroit, Mich. Filed May 8, 1922. Serial No. 559,224. 11 Claims. (Cl. 70—19.)

1. In a device of the character described; an enclosing case; a rotatable cap fitted to one end of the case provided with a plurality of graduations adapted to co-ordinate with indicating means on the enclosing case; a manually rotatable and longitudinally movable bolt secured to the cap having a laterally extending tongue; a washer keyed to the bolt having a lug adapted to engage any of a plurality of serrations formed in the wall of the enclosing case; a spring located between the rotatable cap and the washer; a plurality of rotatable co-ordinating tumblers housed in the case severally provided with slots adapted to be brought into registration with each other; means carried by the bolt adapted to rotate one of the tumblers and thereby the co-operating tumblers, whereby the slots of the respective tumblers may be

brought into registration with each other to receive the tongue projecting from the bolt, and a co-acting

member adapted to receive the end of the bolt when longitudinally actuated, whereby a locked condition may be obtained.

1,460,519. PROCESS OF CLEANING AND CONDITIONING COTTON FOR SPINNING. PHILIP C. WADSWORTH, New York, N. Y., assignor to Coton Corporation, New York, N. Y., a Corporation of New York. Filed June 6, 1921. Serial No. 475,212. 11 Claims. (Cl. 19—66.)

3. In the art of treating lint cotton, the process which consists in partially dehydrating the cotton of its natural moisture after it has been ginned, cleaning such cotton while in dehydrated condition, and subsequently restoring the natural moisture to the cleaned cotton.

1,460,520. SIGN AND ITS SUPPORT. WILLIAM J. WARK, Columbus, Ohio. Filed Mar. 22, 1922. Serial No. 545,632. 4 Claims. (Cl. 40—125.)

1. In a sign the combination of base members adapted to be rigidly secured in spaced relationship, sign hold-

ing standards movably connected with said base members, and means whereby said standards may be swung laterally or longitudinally to horizontal positions.

1,460,521. TRANSMISSION DRIVE FOR MOTOR-VEHICLE INSTRUMENTS. FREDERIK G. WHITTINGTON, Evanston, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Mar. 17, 1922. Serial No. 544,648. 4 Claims. (Cl. 74—7.)

1. In a motor vehicle having a transmission casing at the rear of the motor, and a longitudinal propeller shaft of which the forward member is journaled in the transmission casing and is exposed at the forward side thereof; a supplemental housing member applied onto the forward side of the transmission casing around the exposed end of said propeller shaft member; a pair of intermeshed driving and driven spiral gears and a casing within which they intermesh, the margin of the opening in the supplemental housing and the spiral gear casing having the one a male and the other a female terminal adapted for engagement to close the opening in the supplemental housing, and means for engaging the driving gear of said pair with the propeller shaft when said terminals are engaged.

1,460,522. TRANSMISSION DRIVE FOR SPEEDOMETERS. FREDERIK G. WHITTINGTON, Evanston, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Apr. 3, 1922. Serial No. 549,192. 5 Claims. (Cl. 74—7.)

1. In an automobile vehicle in combination with a transmission casing, a transverse power driven shaft

journalled therein and protruding therefrom; a gear demountably carried on the protruding end of said shaft; a supplemental housing member applied on the side of the casing through which said shaft protrudes enclosing said gear; a gear housing and intermeshing gears and their respective shafts therein demountably mounted on the supplemental housing with one of the shafts protruding thereinto, and a gear demountably carried by said last mentioned shaft meshing with the first mentioned gear in the supplemental housing.

1,460,523. TRANSMISSION DRIVE FOR SPEEDOMETERS AND THE LIKE. FREDERIK G. WHITTINGTON, Evanston, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Apr. 3, 1922. Serial No. 549,193. 4 Claims. (Cl. 74—7.)

1. In combination with a transmission casing and a power shaft journalled therein and protruding at one end therefrom; a supplemental gear housing mounted against the outer side of the frame enclosing said protruded shaft; a cover plate for said housing mounted slidably on the supplemental housing; a driven shaft journalled in said cover plate intruding at one end into the housing chamber, and accessible at the other end for coupling, and a pair of intermeshing gears demountably mounted on said protruding and intruding shaft ends respectively.

1,460,524. ANGLE GEAR-HOUSING ADAPTER FOR FLEXIBLE SHAFTS. FREDERIK G. WHITTINGTON, Evanston, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Apr. 3, 1922. Serial No. 549,194. 2 Claims. (Cl. 74—7.)

1. An angle-formed gear housing for interposing in a flexible shaft connection and the like, comprising an integral casing having its arms at an angle to each other, both axially chambered, said chambers intersecting and merging at the angle, one of said arms having a chamber extending throughout its full length and enlarged at the end outside the angle for admitting a gear onto the shaft therein, and being restricted in diameter at the further side of the intersection to form a shoulder for stopping said gear without journaling the shaft adjacent to the gear, said chamber being enlarged taperingly from said restriction toward the end of the arm, and provided with a journal bushing for the shaft in the end.

1,460,525. CIRCULAR-MILLING MACHINE. ALGOT A. WICKLAND, Chicago, Ill., assignor to Campbell, Wyant & Cannon Foundry Co., Muskegon, Mich., a Corporation of Michigan. Filed Mar. 25, 1922. Serial No. 546,601. 10 Claims. (Cl. 90—15.)

1. The combination in a surfacing machine of a vertical post imbedded in a concrete foundation, an arm revolvable about said post, a stationary annular support concentric with said post, said support comprising a plurality of segments anchored in a concrete foundation, means on said arm engaging said support, a stationary annular work table secured in a concrete foundation, a cutting tool on said arm adjacent said table, and means for revolving said arm.

1,460,526. WIRE STITCHER. JOHN WOLF, Cicero, and MARTIN BURGER, Chicago, Ill., assignors, by mesne assignments, to Ideal Stitcher & Mfg. Co., Chicago, Ill. Filed Sept. 13, 1919. Serial No. 323,658. 12 Claims. (Cl. 140—131.)

1. In a wire stitcher, wire feed mechanism comprising a pair of continually rotating feed rollers having opposed peripheral feed edges between which the wire is fed, with means for effecting an intermittent feeding of the wire by said rollers, said means including a metallic yielding mounted peripheral edge of one of the rollers.

1,460,527. POOL-TABLE REGISTER. CARL ABSMEIER, Grand Rapids, Mich. Filed Sept. 17, 1921. Serial No. 501,336. 6 Claims. (Cl. 235—91.)

1. In combination, a casing, a plurality of registering counters located within the casing, said casing having openings to show the numbers on the counters, a plurality of vertically reciprocable bars mounted for vertical movements within the casing, one for each counter, means connecting the bars with the counters to operate the same on movements of said vertical bars, a latch bar located within the casing horizontally above the bottom of the casing, said latch bar having locking dogs projecting therefrom through the bottom of the casing,

means normally holding the latch bar in lower position, lugs located under the bottom of the casing on which a pool ball rack may be placed back of the locking dogs, means operatively connecting each of the vertical bars

with the latch bar to elevate the latch bar on upward movement of any one of the vertical bars, and means for individually elevating the vertical bars, substantially as described.

1,460,528. APPARATUS FOR ROLLING GEARS BY A NEW METHOD. HAROLD N. ANDERSON, Cleveland, Ohio. Filed Sept. 17, 1920. Serial No. 410,866. 35 Claims. (Cl. 80-16.)

12. In a machine for rolling gears, a gear blank holder, a shaft arranged to rotate in one direction, means driven by said shaft for rotating the holder alternately in both directions, means also driven by said shaft for rotating the holder continuously in one direction, a manually operable lever whereby one or the other of said means is put into operation and means whereby putting either into operation before operation of the other is suspended or prevented.

1,460,529. AUTOMOBILE INCLOSURE. GEORGE E. BISHOP, Cleveland, Ohio. Filed Jan. 20, 1922. Serial No. 530,574. 10 Claims. (Cl. 296-139.)

1. An automobile side inclosure adapted to be mounted upon the automobile door, comprising suitable curtain fabric; metallic strengthening means for said fabric; means for mounting the inclosure upon the door, said

mounting means being connected to the fabric adjacent the upper edge of the latter; and mounting-receiving and

securing means secured to the fabric adjacent the lower edge of the latter, the mounting being turnable in said last-mentioned means.

1,460,530. METHOD OF AND APPARATUS FOR MEASURING ELECTRICAL RESISTANCES. RICHARD P. BROWN and CHARLES P. FREY, Philadelphia, Pa., assignors to Brown Instrument Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 31, 1920. Serial No. 407,231. 4 Claims. (Cl. 175-183.)

1. In apparatus for successively measuring the resistance of a plurality of resistance elements comprising a Wheatstone bridge circuit, means for establishing a potential difference between one pair of bridge leg junctions, a deflecting galvanometer connected between the other pair of bridge leg junctions, the improvement which consists in switch mechanism for successively cutting the different resistances into and out of the bridge circuit and including provisions for rendering the galvanometer inoperative during the period in which one resistance is being replaced by the other.

1,460,531. HEMOSTATIC FORCEPS. JOHN F. CALLAHAN, Brockton, Mass. Filed Feb. 18, 1921. Serial No. 445,949. 14 Claims. (Cl. 128-322.)

1. Hemostatic forceps having gripping jaws, and such jaws being provided with runways in their gripping faces adjacent to but back from the extremities of the jaws, said runways being adapted to contain a ligature cord and to guide a loop formed in such a cord to the substance gripped between the jaws.

1,460,532. DOUBLE-REDUCTION DRIVE FOR MOTOR VEHICLES. HARRY D. CLARKE, Plattsmouth, Nebr., assignor to The Ohio Tractor Company, Columbus, Ohio, a Corporation of Ohio. Filed Mar. 14, 1919. Serial No. 282,655. 2 Claims. (Cl. 74—7.)

1. A differential including a housing, load carrying axles carried by said housing, wheels journaled on said axles, drive axles journaled in said housing and in a plane above and in vertical alinement with said load carrying axles, means connecting the drive axles to the wheels, and a power shaft driving said drive axles and located in a horizontal plane with the load carrying axles.

1,460,533. COMPRESSION INNER TUBE FOR TIRES. GEORGE R. COLBY, Portland, Oreg. Filed Sept. 17, 1921. Serial No. 501,303. 4 Claims. (Cl. 152—13.)

1. An inner tube for pneumatic tires having, in deflated condition, a contour to fit the inside of a shoe and provided throughout its entire area with a plurality of circumferentially extending series of indentations, which indentations, upon inflation of the tube within a tire, are forced outwardly by the filling air to compress the remainder of the tube mass, said series being separated by passive areas adapted normally to contact with the inside of the tire shoe, the passive areas being substantially continuous in straight lines circumferentially of the tube.

1,460,534. MONORAIL TRANSPORTATION SYSTEM. FREDERICK R. CORNWALL, St. Louis, Mo. Filed July 14, 1922. Serial No. 574,947. 5 Claims. (Cl. 105—150.)

1. In a monorail carrier, a truck comprising tandem wheels, individual wheel pieces each journaled at one end on one of said wheels, crossing each other and having a pivotal interengagement at their crossing points, means supporting the opposite end of each wheel piece on the other wheel piece, and a load carrying member suspended from the point of interengagement of said wheel pieces.

1,460,535. PISTON. DAVID P. DAVIES, Racine, Wis., assignor to J. I. Case Threshing Machine Company, Racine, Wis., a Corporation. Filed Mar. 9, 1921. Serial No. 450,833. 2 Claims. (Cl. 74—108.)

1. In a piston for motors, a skirt section having flanges at its upper end forming a piston ring retaining groove, and a follower-block secured to said skirt section and having a flange spaced from the top flange of said skirt section, said flanges forming a groove larger than said first-mentioned groove for the reception of an enlarged piston ring.

1,460,536. SPOKE. LYNDON DEAN, Taloga, Okla. Filed Apr. 10, 1922. Serial No. 551,114. 2 Claims. (Cl. 301—70.)

2. The combination with a vehicle wheel, of a means for compensating for irregularities between the rim band and felly of the wheel and for adjusting spokes with respect to the hub and felly of the wheel, comprising a wheel in which the spokes thereof terminate a distance from the felly, a ferrule on the end of each spoke having a bolt extension freely received in the felly, a binding nut and a locking nut on each bolt, the former in contact with the felly, and a socket removably secured to the felly surrounding the nuts and receiving therein a portion of the ferrule.

1,460,537. ENGINE PISTON. ROBERT L. DEWAR, Grand Rapids, Mich. Filed July 1, 1921. Serial No. 481,866. 1 Claim. (Cl. 74—108.)

In an engine piston having an annular body with ring grooves formed in it near the upper end, and an annular wall extending downwardly therefrom, inwardly inclined concavo-convex offsets formed from a line below the ring grooves and extending partly around the wall of the piston to its open end forming concave grooves in the outer surface of the piston and rendering this end of the piston slightly compressible, and producing air compression for properly distributing the oil around the piston.

1,460,538. LOCKING DEVICE FOR MOTOR VALVES. LUCIAN F. EASTON, La Crosse, Wis. Filed Aug. 20, 1921. Serial No. 493,975. 4 Claims. (Cl. 251—134.)

4. The combination with a valve having a stem provided with a groove, a casing, a spring held by the cas-

ing at one end applied to shift the valve in one direction and a head on the stem serving as an abutment for the other end of the spring, of a member on the outer end of said head, formed to interlock with the stem so as to be held against longitudinal movement thereon and

having an open-ended slot to permit it to be placed transversely around the stem and fitting in said groove, and a ring-member extending around the stem and formed to close said slot and secure said member against transverse displacement from the stem, one of said members having a recess in which the other is held.

1,460,539. CONVEYING APPARATUS. BRUCE V. EDWARDS, Newark, N. J., assignor to William L. Leary, Chicago, Ill. Filed May 8, 1919, Serial No. 295,575. Renewed Oct. 2, 1922. Serial No. 591,972. 11 Claims. (Cl. 198—20.)

1. A turning conveyor comprising a turret turning about a vertical axis, and a supporting roller pivoted on said turret to turn about a horizontal axis, means for adjusting said turret, and means for rotating said roller.

1,460,540. DIRIGIBLE HEADLIGHT. PERCY J. ELEDGE, Cleveland, Mo. Filed Feb. 27, 1922. Serial No. 539,454. 6 Claims. (Cl. 240—62.)

1. In combination with a motor vehicle, a dirigible headlight mechanism comprising a headlight turning

spindle, a motor for operating it in one direction, a flexible cable for operating it in another direction, a shiftable link member on one end of the flexible cable, a shifter for said link member, and a member-engaging hook on the steering gear of the motor vehicle adapted to engage the member when it is in one position and to disengage therefrom when it is in another position.

1,460,541. SHEAVE-BEARING HOUSING. JAMES H. FOOTE, Cincinnati, Ohio. Filed Jan. 30, 1922. Serial No. 532,776. 6 Claims. (Cl. 16—211.)

1. A sheave bearing housing consisting of a sheave, a supporting element to which said sheave is journaled, adapted to fit into an aperture in a mounting frame, a face plate provided with a centrally disposed opening for the passage of the sheave and with means to engage the mounting frame, spacers for the side walls of the supporting element carried by and connecting said face plate to said supporting element, each of a plurality of said spacers being provided with a flexible extension, and means associated with said extension to releasably engage the mounting frame and, in cooperation with the face plate, lock the housing to said frame.

1,460,542. SWITCH. ANDREW E. GRISWOLD, Seattle, Wash. Filed Apr. 20, 1921. Serial No. 462,818. 4 Claims. (Cl. 200—50.)

2. A safety switch of the character described comprising in combination, a switch housing provided at the front with an outwardly opening door, spaced apart hinges having the sections thereof fixed to said housing and to said door, a single hinge pin extended through and pivotally connecting the sections of both hinges, a switch mechanism within the housing and a handle operatively connected for operating the said switch mechanism, pivotally mounted on said hinge pin between the said hinges.

1,460,543. AUTOMATIC STOP FOR PHONOGRAPHS. MARIUS E. GRISWOLD, Burlington, Iowa. Filed Feb. 7, 1921. Serial No. 442,926. 15 Claims. (Cl. 192—122.)

1. In a phonograph, the combination with a revoluble turn-table, of an automatic stop mechanism for said turn-table, means revoluble with said turn-table for actuating said mechanism, and adjustable means movable

independently of said mechanism to cause the same to stop said turn-table at the completion of a predetermined number of revolutions of said turn-table.

3. In a phonograph, the combination with a revoluble turn-table, of an index pointer, a dial, automatic stop mechanism controlled by said pointer and movable independently thereof to stop said turn-table at the completion of a number of revolutions determined by the relative position of said pointer and dial, and means revoluble with said turn-table for actuating said stop mechanism.

1,460,544. SWITCH ATTACHMENT FOR FOLDING MACHINES. LOAMMIE A. GUTRIDGE and FRANK M. MOSIER, Columbus, Ohio, assignors, by direct and mesne assignments, of one-third to said Gutridge and two thirds to G. N. Slonaker, Columbus, Ohio. Filed Jan. 20, 1921. Serial No. 438,547. 2 Claims. (Cl. 192-127.)

1. In a paper folding machine, in combination, a guide structure for directing paper through said machine, a switch attachment comprising inner and outer walls adapted to detachably engage therebetween a part of the guide structure, said attachment being positioned so that a circuit therethrough will be closed when paper is clogged within said guide structure, a motor for operating said machine, a starting switch for said motor, and circuit connections between said starting switch and said

switch attachment, whereby upon the closing of the circuit governed by said switch attachment, said motor switch will be opened to arrest current flow through said motor.

1,460,545. PRODUCTION OF ETHYLENE. PIERRE E. HAYNES, Buffalo, N. Y., and GEORGE O. CURME, Jr., Pittsburgh, Pa., assignors to The Linde Air Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 9, 1918. Serial No. 221,407. 2 Claims. (Cl. 260-170.)

1. A process of forming ethylene from gaseous hydrocarbon mixtures containing ethane, which comprises the steps of isolating ethane from the mixture in a state of substantial purity and heat treating the ethane under substantially optimum conditions for the production of ethylene.

1,460,546. DRUM CONTROLLER. RICHARD B. HUNTER, Milwaukee, Wis., assignor to The Cutler Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed July 19, 1920. Serial No. 397,374. 8 Claims. (Cl. 172-179.)

2. A series parallel drum controller comprising a plurality of contacts and a plurality of segments, the latter being arranged in three electrically independent groups, two of said groups of segments being jointly co-operable with certain of said contacts to effect all the parallel circuit connections provided by the controller and the third set of segments being co-operable with certain of said contacts to effect all the series circuit connections,

certain of said segments being arranged to maintain continuity of circuit during series parallel commutation, the number of said contacts being not greater than the number of operative positions of the controller.

1,460,547. FURNACE-ASH-PIT SCREEN SIFTER. JOHN JIRASEK, Detroit, Mich. Filed Feb. 1, 1923. Serial No. 616,362. 3 Claims. (Cl. 83—60.)

1. An ash pit screen sifter of the character described, comprising a wire screen basket, angle slides for the sides of said basket, means for attaching said slides to the basket, a support slide frame for holding the basket in place beneath the fire grates of the furnace supports for attaching said frame permanently to the walls of the ash pit and means for operating said sifter for separating the coal from the burned ashes.

1,460,548. CONNECTING-ROD-TESTING APPLIANCE. ARTHUR J. KOON, JOHN HOOGERHYDE, and JAMES E. COLLINS, Grand Rapids, Mich.; said Koon assignor to said Hoogerhyde and said Collins. Filed Nov. 21, 1921. Serial No. 516,631. 3 Claims. (Cl. 33—180.)

1. An appliance of the class described, comprising an elongated base having parallel guide ways at one end portion extending longitudinally of the base and formed at its other end with two spaced apart, upwardly projecting posts having V-shaped recesses cut in the upper ends thereof, said recesses being in alignment and extending at right angles to said guide ways, and a block slidably mounted on said guide ways, said block having two spaced apart upwardly projecting posts formed therewith, said posts having V-shaped aligned recesses cut in the upper ends thereof, said last-named V-shaped recesses being parallel to said first-named V-shaped recesses, substantially as and for the purposes described.

1,460,549. DEVICE FOR SOLDERING ICE CANS AND THE LIKE. WALTER W. LANGDON, Cincinnati, Ohio. Filed Dec. 26, 1921. Serial No. 524,813. 3 Claims. (Cl. 113—78.)

1. In a device for soldering ice-cans, a solder container, a pair of spaced apart arms each having an inturned ear provided with a vertical hole, a sliding rod mounted in

each of said holes and guided thereby, a flexible member adapted to support said sliding rods, means for raising

and lowering said sliding rods and tongs pivotally attached to said rods to detachably support an ice can, for the purposes set forth.

1,460,550. AIR-INLET DEVICE. JOHN H. LOGGINS, Fordyce, Ark. Filed May 3, 1921. Serial No. 466,394. 1 Claim. (Cl. 48—180.)

In an air inlet device for internal combustion engines, a nipple screwed in the intake manifold for the engine, a chamber connected to and communicating with the nipple, a needle valve controlling the passage through the nipple, a valve seat in the chamber adjacent to the bottom thereof, a ball valve for said seat, a branch pipe communicating with the chamber below the valve seat, a pipe connected thereto and connected with the exhaust manifold of the engine, a second short pipe arranged opposite said last mentioned short pipe, communicating with the chamber below its valve seat, and a valve controlling the passage through the last mentioned short pipe.

1,460,551. ICE-CREAM DIPPER. WILLIAM G. LYMAN, Peoria, Ill. Filed Dec. 15, 1921. Serial No. 522,515. 15 Claims. (Cl. 107—48.)

15. In a dipper of the type named, a dipping cup having walls adapted to expand and contract, a handle-portion including a head having a conical cavity to receive the cup, the latter adapted to expand and contract as it moves in contact with the walls of the cavity, a

lever fulcrumed on the handle, a portion connecting the lever with the cup within the head, a spring adapted to

move the cup outwardly, and means on the handle to station the lever at a desired position against the tension of the spring and for releasing the same.

1,460,552. DRAG-SPINDLE GEAR. MAX MAAG, Zurich, Switzerland. Filed Dec. 31, 1918. Serial No. 269,081. 13 Claims. (Cl. 74-36.)

2. A drag spindle gear, comprising a driven feed spindle, means interposing said spindle to permit a small amount of idle movement, a drag spindle geared to said feed spindle and a slipping clutch for the drag spindle.

1,460,553. SURFACE FOR PICTORIAL DISPLAY AND THE LIKE. CHARLES E. A. MERROW, Boston, Mass. Filed Feb. 16, 1921. Serial No. 445,576. 8 Claims. (Cl. 40-135.)

2. An object of the class described having an extended display surface of fibrous material and a metallic inlay embedded therein to prevent distortion of said display surface and consisting of intersecting members extending continuously across said surface and dividing it into a plurality of isolated surface units bonded together in the whole.

1,460,554. DEVICE FOR CARRYING BASKETS AND THE LIKE. MAX J. MOORE, Newark, N. J., assignor to Walter H. Collins, Summit, N. J. Filed Mar. 1, 1922. Serial No. 540,215. 9 Claims. (Cl. 224-45.)

1. A carrier for fruit baskets and the like including in combination a handle, a device at either end thereof

adapted to engage with a basket and basket positioning and steadying members supported from the handle and

engaging the sides of the respective baskets at a lower level than said devices.

1,460,555. COTTON-BOLL-RIPENING APPARATUS. WENSEL MORAVA, Chicago, Ill. Filed July 19, 1920. Serial No. 397,527. 8 Claims. (Cl. 47-36.)

1. An apparatus for ripening cotton bolls, comprising a vertically-extended receptacle for containing a pile of the bolls; a heating means at the bottom of the receptacle; the receptacle having a charging opening at the top and a discharging opening at the bottom, and means for facilitating the discharge of the bolls from the bottom of the pile under the super-incumbent weight thereof.

1,460,556. OVERLOAD PROTECTIVE DEVICE FOR ELECTRIC MOTORS. EUGENE NEWMHAM, St. Louis, Mo. Filed Apr. 10, 1922. Serial No. 551,284. 12 Claims. (Cl. 172-179.)

1. In a device of the class described, the combination of an electric circuit having a magnet coil therein, a second circuit leading directly to the apparatus to be operated, contact members for closing each of said circuits, an actuator for moving one of said contact members to close the circuit leading direct to the apparatus and for moving the other contact member to close the second circuit after the first named circuit is closed, and automatic means for releasing the first contact member after the circuit including the magnetic coil has been closed.

1,460,557. REINFORCED-THREAD EXPANSION SHIELD. JOHN EDWARD OGDEN, Mountainville, Cornwall, N. Y. Filed Jan. 11, 1921. Serial No. 436,492. 23 Claims. (Cl. 85—24.)

1. A tubular expansion shield having walls of substantially uniform thickness which are helically corrugated to form a threaded bore, said bore being gradually constricted in at least one plane which includes the axis of the shield, and reinforcing open bends in the metal near the plane of said constriction.

1,460,558. DREDGER. ARTHUR O. OGDEN, National City, Calif. Filed Nov. 22, 1920. Serial No. 425,738. 7 Claims. (Cl. 37—70.)

1. A dredger, including an outwardly extended revolving mounted tubular axle positioned substantially above the ground to be removed, a plurality of curved digging and conducting members communicating with the interior of said axle and means for revolving said tubular axle together with said curved digging and conducting members.

1,460,559. PINEAPPLE-SHELL-FEEDING DEVICE. HUGH F. OPPERMAN, Honolulu, Territory of Hawaii, assignor to California Packing Corporation, San Francisco, Calif., a Corporation of New York. Filed May 31, 1922. Serial No. 564,683. 13 Claims. (Cl. 146—11.)

1. The combination with a rotary sizing head of a pineapple sizing machine and a pineapple meat eradicator, of means for automatically transferring pineapple shells from the periphery of the sizing head to the meat eradicator.

1,460,560. FEEDER FOR KERNEL-BLANCHING MACHINES. GEORGE PARK, Bayonne, N. J. Filed Dec. 23, 1921. Serial No. 524,548. 1 Claim. (Cl. 146—14.)

In a feeder for a blanching machine, the combination with a vibrating feeder having a hole therethrough, a filling block resting therein having a conical aperture therethrough, an escapement secured thereunder having a hole therethrough and members subtending therefrom for the controlling and regulating of the kernels, of a rotating cylindrical distributor having slots thereon, a bridge, having a slot therethrough and sides thereon, interposed between said vibrating feeder and said rotating cylindrical distributor for the reception of kernels passing from the one to the other.

1,460,561. HOG OILER. CLARENCE N. PETERSON, Polk, Nebr. Filed Oct. 11, 1921. Serial No. 506,958. 2 Claims. (Cl. 119—159.)

1. A hog treating device comprising a tank, a pipe communicating with the lower portion thereof and extending upwardly whereby to constitute a pump cylinder, an outwardly opening check valve at the juncture of said pipe with the tank, a piston removably mounted within the pipe and having a piston rod extending above the end of the latter, a treadle hinged within the doorway of a hog house, a rod pivotally connected with the free end of the treadle and extending upwardly above the end of said pipe and connected with said piston rod, and a spring normally holding said treadle elevated and a discharge pipe communicating with said first named pipe beyond the check valve therein and extending upwardly with its upper end laterally extended and then extended downwardly and terminating in a discharge nozzle located above said treadle.

1,460,562. MOTOR CONTROLLER. CHARLES W. YERGER, Milwaukee, Wis., assignor to The Cutler Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed June 23, 1919. Serial No. 305,966. 5 Claims. (Cl. 172—179.)

3. In a motor controller, in combination, a plurality of series connected resistance sections and a contact drum having co-operating contacts to effect reversals of the motor, to exclude certain of said resistance sections from circuit, and to thereafter parallel certain of said resistance sections, certain of said contacts functioning both for motor reversals and resistance control.

1,460,563. GAUGE. SIDNEY E. ALLWRIGHT, Houston, Tex. Filed Sept. 28, 1922. Serial No. 591,068. 1 Claim. (Cl. 33—180.)

A one-piece gauge formed with a central plate having a circular socket and radiating arms carried by said plate the free ends of said arms being formed with smooth faces lying in a plane perpendicular to the axis of said circular socket.

1,460,564. DRAFT MEANS. RAYMOND T. ASHLEY, Reno, Nev. Draft Mar. 20, 1922. Serial No. 545,223. 3 Claims. (Cl. 280—33.44.)

1. A draft device for interposition between a tractor and an implement comprising a reach member disposed lengthwise with respect to the line of pull or draft, a pair of transverse bars pivoted to said reach, sheaves on one of said bars and positioned on opposite sides of said reach, and a substantially U-shaped flexible member reeved through said sheaves and secured at the ends thereof to the other of said bars and adapted, when one of said bars is rotated on its pivot, to rotate the other bar to a like degree in the opposite direction.

1,460,565. APPARATUS FOR THE DESTRUCTION OF REFUSE. ROBERT BALMER, Toronto, Ontario, Canada. Filed Oct. 18, 1919. Serial No. 331,669. 21 Claims. (Cl. 110—8.)

1. In a refuse destructor, a plurality of traveling units each comprising a grate and an enclosed ash pit integral therewith, a blower for supplying a preheated gaseous mixture to each ash pit during its periods of rest, and propelling means for moving said units intermittently.

8. In a refuse destructor, a series of storage bins and a combustion chamber below said bins, the crown of said chamber being of decreased thickness underneath each successive bin.

21. In a refuse destructor, a series of storage bins, means for supplying air under pressure to said bins; heating chambers below said bins, valved intakes for supplying cold air to said heating chambers when desired; pipes from said air-compressor extending through said heating chambers to said bins; a primary combustion chamber below the level of said bins; a secondary combustion chamber beneath said heating chambers; a suction fan housed in a chamber communicating with said heating chambers, the said fan being flue-connected to each bin and to said combustion chambers, to withdraw gases from said bins and to deliver said gases to the combustion chambers as desired, and flues from said heating chambers to said fan.

1,460,566. REFUSE-DISPOSAL PLANT. ROBERT BALMER, Toronto, Ontario, Canada. Filed Dec. 24, 1921. Serial No. 524,794. 20 Claims. (Cl. 110—8.)

1. In a refuse destructor, a plurality of refuse-disposal elements comprising separate chambers disposed in vertical relation, within a common housing, the top of said

housing being supported independently of the supports for said chambers, and the supports for one of said chambers being independent of the supports for another of said chambers.

7. A refuse destructor having a plurality of floors, a refuse storage bin on an upper floor and a combustion chamber on a lower floor, an upwardly projecting partition upon one floor extending to an adjacent floor, and a downwardly projecting member depending from said adjacent floor adapted to engage in variable contact with said partition.

20. In a refuse destructor having a combustion chamber at a level below the dumping level, a tipping platform inclosed on two opposite sides by walls or partitions and by the overhead floor of a containing building and forming a passage, a joint between said walls and said floor affording a vibration-absorbing air-seal therebetween, and means adapted to control ventilation of the passage.

1,460,567. STRAIN CLAMP. THOMAS H. BARNARD, Toronto, Ontario, Canada. Filed Aug. 3, 1922. Serial No. 579,478. 12 Claims. (Cl. 24—135.)

1. In a strain clamp for cables, the combination of a channel-shaped casing; a bar lying between the sides of said casing; bolts passing through the sides of said casing and said bar to clamp the latter in position; a clamping bar below said first mentioned bar; and means engaging both sides of said bar for actuating said clamping bar to grip a cable.

1,460,568. CAR ROOF. CHARLES DAVID BONSALE, Pittsburgh, Pa., assignor to P. H. Murphy Company, New Kensington, Pa., a Corporation of Pennsylvania. Filed Apr. 15, 1922. Serial No. 553,113. 20 Claims. (Cl. 108—5.4.)

1. A car roof comprising a plurality of roof sheets whose side margins are connected together to form hollow seams having side walls of double thickness at the ridge and of single thickness adjacent to the eaves.

1,460,569. SYSTEM OF CONTROL FOR ELECTRIC ELEVATORS. PETER H. BRODESSER, Milwaukee, Wis. Filed Aug. 26, 1920. Serial No. 406,043. 14 Claims. (Cl. 172—152.)

1. In a control apparatus for electric elevators provided with traveling devices adapted to be intermittently raised and lowered, the combination of a hoisting drum, a main motor operatively connected therewith, an auxiliary motor means operable from the traveling devices for energizing the auxiliary motor intermittently, and a

relatively stationary brake electrically energized to open upon the energization of either motor and to close after the deenergization of both motors and independently of either motor, whereby said motors may be repeatedly alternately connected to said hoisting drum.

5. In combination, a hoisting drum, a main motor having its shaft operatively connected with said hoisting drum, an auxiliary motor having a loose connection with said main motor shaft, a clutch for operatively connecting the auxiliary motor to said shaft, electromagnetic means for controlling the operation of said clutch, and a contactor for controlling the operation of said electromagnetic means, said contactor having a control coil electrically connected in series with said main motor, whereby said electromagnetic means is placed directly under the control of said main motor and is thereby directly dependent upon the energization of said main motor.

1,460,570. OUTBOARD MOTOR. WILLIAM F. A. BUEHNER, Detroit, Mich. Filed Aug. 31, 1921, Serial No. 497,101. Renewed May 7, 1923. 6 Claims. (Cl. 115—18.)

3. In an outboard motor wherein the motor is supported from a boat with the propeller in a position liable to encounter obstacles, means for supporting such motor so that it may yield when the propeller encounters an obstacle, said means including interlocking releasable members which hold the motor at any position to which it may be swung by its propeller encountering an obstacle, one of said interlocking members being fixed relative to the motor and adapted to rotate relative to the other member which is movable in a lateral direction from said rotatable member.

1,460,571. CONCRETE MIXER. BERT C. CAREY, Sioux City, Iowa, assignor of one-fourth to Frank P. Berger and one-fourth to Bayton F. Carey, both of Sioux City, Iowa. Filed Nov. 21, 1921. Serial No. 516,577. 5 Claims. (Cl. 83—73.)

1. A concrete mixer embodying a mixing receptacle having an upper opening and mounted to rock between normal and dumping positions, a guard grate normally extending across said opening and hinged to the receptacle to swing from the opening, and an element fixed, with respect to the receptacle, to be positively engaged by the grate when the receptacle is swung to dumping position, to swing the grate from the opening.

1,460,572. AUTOMOBILE SIGNAL. LEWIS H. CHARLING, Kenosha, Wis. Filed Mar. 14, 1922. Serial No. 543,559. 1 Claim. (Cl. 116—54.)

An automobile signal comprising a casing having an open side wall, a closure member pivoted to said casing for closing the opening, a signal carried by said member, a spring having one end secured to a wall of the casing and a free end adapted to urge said member outwardly, a cable secured adjacent said signal, a tubular support secured to the car body, said car body having an aperture therein, a ring on the other end of said cable, said cable extending thru said tubular support and said aperture, and a stud on said body adapted to receive said ring whereby on the release of said ring from said stud, said spring is operative to move said signal outwardly to a position limited by the length of said cable.

1,460,573. AUTOMATIC MEASURING DEVICE. EDGAR D. CHURCH, FRANK S. LASH, and JACKSON W. VAN BRUNT, Saginaw, Mich., assignors to Jackson & Church Company, Saginaw, Mich., a Corporation of Michigan. Filed May 10, 1922. Serial No. 559,929. 3 Claims. (Cl. 83—44.)

1. In combination, a hopper, electrically actuated vibrators on the walls of said hopper, a conveyor beneath said hopper, a rider vertically movable above said conveyor, contact devices electrically connected to said vibrators, means operatively connecting said rider and

said contact devices adapted to actuate said contact devices in succession, one of said contact devices electrically

connected to a vibrator, a second contact device connected to another vibrator, and a third contact device adapted to actuate signals, for the purposes set forth.

1,460,574. COIN-CONTROLLED VENDING MACHINE. ANTHONY COSEGLIA, West Hoboken, N. J., assignor, by mesne assignments, to Autosales Corporation, a Corporation of New York. Filed Aug. 18, 1917. Serial No. 186,843. 2 Claims. (Cl. 211—8.)

1. In a vending machine, a casing having a magazine for containing the vendable articles, a delivery cylinder pivoted below said magazine for ejecting the bottom article, a reciprocable slide connected with said cylinder for actuating the same into delivery position, said slide having a slot provided with a shoulder, a pivoted lever having a pin to engage said slot and thereby actuate said slide when the lever is operated, means for manually operating said lever from the outside of the casing, and a shoulder on said pin for interlocking with said first named shoulder to lock said slide against operative movement, when an attempt is made to operate said slide otherwise than through said lever.

1,460,575. CURTAIN AND DRAPERY SUPPORT. WILLIAM J. DONOVAN, Philadelphia, Pa. Filed May 1, 1922. Serial No. 557,770. 1 Claim. (Cl. 156—13.)

A curtain and drapery support comprising a plurality of channel-like telescopic sections, the upper edges whereof are bent at right angles thereto and inwardly folded upon themselves while the lower edges are similarly bent at right angles and upwardly turned in parallelism to the face of the support with the edges thereof folded upon themselves, opposed integral end portions of like cross section at right angles to the face of the support, a plurality of opposed notches in the walls of the in-

wardly and upwardly turned parts of the end lower portions for supporting a curtain pole at variable distances relative to the inner face of the support, and opposed

angle brackets secured to the inner faces of the end portions having inverted key-hole slots in their back and inner faces whereby the device may be supported on the face or outer edges of a window casement as desired.

1,460,576. LUBRICATION RECORD. SIDNEY S. EMERY, Denver, Colo. Filed Nov. 22, 1921. Serial No. 516,916. 3 Claims. (Cl. 283-48.)

LUBRICATION RECORD.			
PARTS		Miles	Time
SPRINGS			
		250	
STEERING GEAR	Drag Link	1000	
	Cross Rods	250	
	King Bolts	250	
WHEELS	Front	Inspected	500

	Embracing Bolts	1000	
	Rollers	500	
	Sliding Wheel	1000	
BATTERY	Oil	250	
	Tested	250	

1. A lubrication record comprising a chart having a plurality of vertical columns and transversely ruled spaces, one of said columns containing a list of the parts to be lubricated, another column containing figures representing the number of miles that may properly elapse after each lubrication, and two parallel columns adapted to receive an entry of the date and the speedometer reading at the last lubrication.

1,460,577. CROWNING MACHINE. FRANK JOHN FAL-LADA, Chicago, Ill. Filed Aug. 21, 1922. Serial No. 588,109. 8 Claims. (Cl. 97-41.)

1. In a machine of the class described, a frame mounted on supporting wheels, one set of which are geared to furnish power for revolving a rotary cutter through tractive effort, a spiral rotary cutter mounted to be revolved and driven by a traction wheel of the machine and supported in its relationship to the ground by wheels

rolling on the ground and connected to float upward and downward and carry rotary cutters with them over the uneven surfaces of the ground in combination with some disk cutters placed forward of the rotary cutters and adapted to slit the ground by the movement of the machine in advance of the rotary cutters and said rotary cutters provided with means for adjusting the depth on either end thereof more or less as relates to the transverse position of the revolving cutters.

1,460,578. TRACTOR HITCH. FELIX MICHAEL FISCHER, Kewanee, Ill. Filed Sept. 19, 1921. Serial No. 501,671. 2 Claims. (Cl. 97-233.)

1. In an appliance of the character described, the combination of a substantially-straight metal pipe constituting a draft-beam, a strut member fastened to the middle of said pipe and having a forwardly-extended socket, a forwardly-projecting draw-bar pipe secured in said socket, a pair of collars fastened to said pipe on opposite sides of and remote from said strut member, truss rods connected at their ends to said collars and coacting with the struts of said member, tie rods connecting said collars to the front end portion of said forwardly-extended draw-bar pipe, sleeves on said pipe outwardly beyond said collars but remote from the ends of the main pipe, carrying wheels revoluble about the axis of said draft-beam pipe on said sleeves, means permitting the attachment of a traction appliance to the front end of said draw-bar pipe, and means permitting the attachment of agricultural implements to said main-beam pipe.

1,460,579. PHONOGRAPH. WILLIAM A. FRICKE, Chi-cago, Ill. Filed Dec. 5, 1919. Serial No. 342,605. 12 Claims. (Cl. 192-122.)

1. A phonograph including a turn table for support-ing and rotating a disc record; means for stopping the turn table; a threaded shaft having a gear wheel for turning it, there being a threaded formation upon the periphery of the turn table in turning engagement with said gear wheel to turn said shaft; a rider in threaded engagement with the shaft and brought thereby into actuating relation with said means; and two reversely related scales placed along the line of travel of the rider for measuring the number of rotations of the turn table.

1,460,580. FRICTION SHOCK-ABSORBING MECHA-NISM. STACY B. HASELTINE, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Aug. 7, 1920. Serial No. 401,901. 8 Claims. (Cl. 213-36.)

1. In a friction shock absorbing mechanism, the com-bination with a central friction post; of a plurality of friction shoes having inner friction surfaces cooperable

with said post and provided also with outer friction surfaces; wedging means disposed exteriorly of the shoes; wedge-shoes cooperable with said wedging means and the

first named friction shoes, said wedge shoes and friction shoes sliding relatively during a compression stroke, and spring means encircling said post for restoring said friction shoes upon removal of the actuating force.

1,460,581. MACHINE FOR MAKING BOOK COVERS. THOMAS E. HEETER, St. Louis, Mo. Filed Jan. 17, 1921, Serial No. 437,941. Renewed Apr. 23, 1923. 10 Claims. (Cl. 154—41.)

1. In a machine of the character described, a work support, a plunger adapted to reciprocate above said work support, a head carried by said plunger having radial grooves formed therein, a finger blade support arranged on said work support, a plurality of slidable finger blades mounted in said finger blade support, said blades being adapted to move into the slots in said plunger head, springs normally actuating said blades outwardly, mechanism for moving said finger blades inwardly, and mechanism for reciprocating said plunger.

1,460,582. METHOD OF AND APPARATUS FOR DRAWING SHEET GLASS. SETH B. HENSHAW, Charleston, W. Va., assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed June 19, 1920. Serial No. 390,062. 5 Claims. (Cl. 49—17.)

1. In a sheet glass drawing apparatus, means for drawing a flat sheet from the glass mass and rolling dies

engaging the edges of the sheet near its source driven to have a peripheral speed of not to exceed one-half the speed at which the sheet is drawn.

1,460,583. KEROSENE VAPORIZER. WILLIAM H. HILL, Manati, Porto Rico. Filed July 3, 1918. Serial No. 243,172. 2 Claims. (Cl. 48—102.)

1. In apparatus of the class described, means for volatilizing a liquid fuel, comprising a heated surface, means for directing the fuel in a film over said surface, a chamber for receiving the volatilized fuel, a fuel supply and means whereby the operation of the fuel supply is governed by the amount of unvolatilized fuel in said chamber.

1,460,584. BANK SAFETY DEVICE. CHARLES A. HON-SINGER, Detroit, Mich. Filed Feb. 9, 1920. Serial No. 357,191. 1 Claim. (Cl. 133—13.)

In a structure for the protection of tellers, a counter, a partition thereabove between teller and customer, a vertically-extending member positioned relative to the counter to provide a space for the passage of funds, etc., means operative to set up "one-way passage" conditions in opposite directions within such space, said means including a passageway formation having its exit end on the customer side of the member, the portion of the passageway on the opposite or entrance side of the member having its bottom wall contour curved upwardly, the plane of the entrance end of such passageway being above the bottom of the vertically-extending member, the curvature of the upwardly-curved wall and the distance between the wall and the vertically-extending mem-

ber on the plane of the entrance end of the passageway being such that unimpeded discharge of a fire arm in said passageway is limited to a generally vertical direction.

1,460,585. GRADING AND SCARIFYING DEVICE FOR TRACTORS. CHARLES W. HOWE, Dayton, and JOSEPH L. GARVER, Hamilton, Ohio. Filed July 25, 1921. Serial No. 487,224. 3 Claims. (Cl. 37—145.)

1. In a device of the type described, the combination with a rear axle of a tractor, of a casting secured thereto, an upwardly, a forwardly, and a rearwardly projecting arm on said casting, an upright member secured to the upwardly projecting arm on said casting, an angle member secured at its apex portion to the upright member and at its inner end to the forwardly projecting arm on said casting, a vertical connecting plate secured to the rear end of said angle member, a drag bar elevating member pivotally secured to said connecting plate, and means mounted upon the forwardly projecting arm of said casting for raising and lowering the drag bar elevating member.

1,460,586. HYDRAULIC DRIVE FOR STOKER RAMS. CURTIS L. HOWSE, Detroit, Mich., assignor to The Underfeed Stoker Company of America, a Corporation of New Jersey. Filed Mar. 2, 1924. Serial No. 540,647. 14 Claims. (Cl. 110—103.)

1. In a stoker-ram drive, the combination with a ram, of an engine therefor, pressure-impulse supply means for one end of said cylinder including a reciprocable, normally closed valve movable within its closed condition by the pressure impulses, and movable to open a pressure-transmitting connection to the engine cylinder when unrestrained, and means for normally restraining the movements of said valve operatable by the movement of said valve within its closed range, to remove the valve-restraint after a predetermined number of impulses.

1,460,587. VALVE. GEORGE H. ISLEY, Worcester, Mass., assignor to Morgan Construction Company, Worcester, Mass., a Corporation of Massachusetts. Filed Feb. 19, 1919. Serial No. 277,952. 6 Claims. (Cl. 251—18.)

6. A conduit comprising two spaced registering sections, a water seal between said sections, a valve operable in the space between said sections, and means extending through said water seal for operating said valve.

1,460,588. TIRE. EDWARD A. JOHNSON, Brooklyn, N. Y. Filed May 13, 1919. Serial No. 296,808. 6 Claims. (Cl. 152—5.)

5. In combination, a tire shoe having on its inner face a plurality of spaced plugs; and a filler disposed in said shoe comprising outer, intermediate and inner layers, and provided with a plurality of spacing plugs between the outer and intermediate layers and between the intermediate and inner layers; the spaces between the plugs of the shoe, when the tire is viewed in longitudinal section, being in the line of the plugs located between the outer and intermediate layers of the filler, and the spaces between the plugs located between the outer and intermediate layers of the filler being in line of the plugs located between the intermediate and inner layers of the filler; said spaces of the shoe and filler providing air space for cushioning said shoe.

1,460,589. FILLING-FORK GRID FOR LOOMS. NEED KNIGHT, Lancaster, S. C., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Sept. 9, 1922. Serial No. 587,055. 9 Claims. (Cl. 139—379.)

1. Filling detecting mechanism for looms comprising a filling fork, a grid carried by the lay comprising a plu-

rality of movable members positioned to cooperate with said filling fork upon the beat-up of the lay, means for actuating said movable member to clear the grid of lint and other materials which would prevent a proper operation of the filling fork.

1,460,590. OPTICAL PICTURE CABINET. STANISLAUS KUCHARSKI, Charlottenburg, near Berlin, Germany, assignor to Richard A. Hansemann, Berlin, Germany. Filed Oct. 1, 1919. Serial No. 327,828. 1 Claim. (Cl. 88—24.)

An optical picture cabinet comprising a cabinet, an inclined mirror in the upper part of the cabinet with its reflecting surface on the under side, a screen in the front wall of the said cabinet and opposite to the inclined mirror, a projecting peripheral border surrounding said screen, an optical lantern in the lower portion of the said cabinet adapted to project beams which are reflected by the said mirror onto the said screen, and a removable wheeled platform carrying the said optical lantern, said optical lantern being attached to the platform with its optical axis vertical and in such position thereon that when said platform is confined within the cabinet the projected picture will register substantially with said mirror.

1,460,591. COMBINATION FURNITURE. CHARLES E. KULIN, Harrisburg, Pa. Filed Feb. 18, 1922. Serial No. 57,567. 2 Claims. (Cl. 211—27.)

1. In combination furniture for household use, a frame comprising end posts arranged in pairs, braces connecting the posts of each pair, means for holding the pairs of end posts in spaced relation to each other, a series of shelves supported on the frame in successively advanced

positions, and on different planes, slings having hooked ends embracing two of the end posts and suspended thereon, said slings having inwardly turned ends constituting shelf engaging elements, and a shelf resting on said inwardly turned ends and bearing against the posts whereby the inward movement of the slings is limited, as and for the purpose described.

1,460,592. CARRIER FOR SPARE WHEELS AND THE LIKE. FREDERICK K. LAWRENCE, Chicago, Ill., assignor, by direct and mesne assignments, to Self-Mounting Carrier Company, Wilmington, Del., a Corporation of Delaware. Filed May 12, 1921. Serial No. 468,885. 15 Claims. (Cl. 224—29.)

1. Lifting mechanism for spare tires and their mountings having a holder on the vehicle for supporting the tire mounting, an arm pivoted to the vehicle and adapted to raise the tire from the ground to the holder, and a seat for engaging the tire mounting, said seat being mounted directly on said arm and being adapted to prevent the tire mounting from shifting in either direction along the arm.

1,460,593. ADJUSTABLE BRACE. WILLIAM LEMOIGNE, Colusa, Calif., assignor of one-fourth to Edward Bogart and one-fourth to A. Weiss, both of Colusa, Calif. Filed May 16, 1922. Serial No. 561,366. 1 Claim. (Cl. 145—66.)

In a brace for turning a bit, a shank for receiving the bit bent at its upper end and terminating in a toothed disc, a handle turned at its lower end and terminating in a toothed disc, and a yoke interposed between the shank and the handle comprising a central member bent at either end and terminating in toothed discs and two connecting links pivotally engaging the discs having spring latches associated therewith for locking the links against pivotal motion.

1,460,594. FLEXIBLE COUPLING FOR DRIVE SHAFTS. AXEL R. LE MOON, Chicago, Ill., assignor to Nelson & Le Moon, Chicago, Ill., a Partnership. Filed Mar. 5, 1921. Serial No. 450,069. 2 Claims. (Cl. 64—96.)

1. A flexible coupling comprising in combination two shaft receiving members and a laminated disk to which said members are secured at alternate points respectively spaced apart adjacent to the periphery of said disk, said disk including beveled edge radially positioned oblong washers secured adjacent to their ends to the adjacent laminations which are all flexible, and clamping means extending through said disk and through the washers whereby said members are respectively secured to said disk in flexible relation to each other.

1,460,595. WINDING SPOOL. WILLIAM R. MARSHALL, Holyoke, Mass., assignor to The Holyoke Company, Holyoke, Mass., a Corporation of New York. Filed Aug. 9, 1921. Serial No. 499,948. 8 Claims. (Cl. 242—124.)

1. A winding spool having in combination a pair of spool heads, a collapsible core comprising a plurality of longitudinal sections severally pivoted to one of the spool heads for swinging adjustment in axial planes to contract or expand the core, said core sections being severally constructed and relatively arranged when the core is expanded to provide an approximately continuous cylindrical winding surface upon which a coil may be wound in true cylindrical shape, one of said spool heads being detachable from the core to permit the coil to be bodily removed from the core when the core is collapsed, and means on the detachable spool head for limiting the expansion of the core.

1,460,596. TRAP. MILES L. MARTIN, Bainbridge, Ga. Filed Oct. 18, 1922. Serial No. 595,315. 2 Claims. (Cl. 43—121.)

1. In a trap, a base, end sections secured to the base, a body portion formed of wire mesh material supported by the end sections, the edges of the wire mesh material being disposed in spaced relation with the base to provide entrance openings, an adjustable wire supported adjacent to the lower edges of the wire mesh material, and pivoted fingers supported by the adjustable wire to normally close the entrance openings.

1,460,597. COLLAPSIBLE WALL. HERMAN W. MAURER, Cleveland, Ohio. Filed Aug. 16, 1921. Serial No. 492,661. 13 Claims. (Cl. 20—20.)

1. A collapsible wall, comprising a collapsible frame section carrying spaced flexible covering walls, means for connecting and initially breaking opposite portions of said frame section, and cooperating means for drawing the remaining opposite portions of said frame section toward each other and gathering said flexible covering walls thereover.

1,460,598. TRACTOR CLUTCH CONTROL. CLARENCE D. METZGER, Shelby, Ohio. Filed Aug. 28, 1922. Serial No. 584,740. 3 Claims. (Cl. 74—39.)

1. A clutch control for tractors comprising a pair of spaced collars each formed of upper and lower halves adapted to be bolted together around the rear axle of a tractor, the upper sides of said collars having horizontal seats, a segmental rack having a horizontal foot secured upon said seats and tying the upper portions of the collars rigidly together, an upstanding lever fulcrumed on said rack and having a dog engaging the same, and a rigid clutch operating arm extending forwardly from said lever.

1,460,599. REINFORCED PNEUMATIC-TIRE CASING. HERBERT NICHOLSON, Chicago, Ill. Filed Apr. 8, 1922. Serial No. 550,614. 1 Claim. (Cl. 152—18.)

A reinforcing insert for pneumatic tire casings comprising, a sheet of vulcanized fiber formed on both

faces with a series of closely arranged shallow depressions of an undercut form adapted to provide an effective bond-

ing connection with the rubber constituent of the tire casing in which it is embedded.

1,460,600. FOLDING HOOD AND SCREEN. GEORGE L. W. PALMER, Plainfield, N. J. Filed Nov. 19, 1920. Serial No. 425,235. 9 Claims. (Cl. 88-24.)

1. A device of the character described having, in combination, a collapsible hood, a frame located at one end of said hood, a screen located in said frame, and a plurality of collapsible members adapted to simultaneously support said frame and hold said hood against collapse and in its extended position.

1,460,601. SPRING STRUCTURE. HARRY A. PALMER, Jackson, Mich., assignor to Reynolds Spring Company, Jackson, Mich. Filed Jan. 18, 1922. Serial No. 530,045. 2 Claims. (Cl. 155-180.)

1. In a spring structure a base frame composed of a strip of sheet metal folded upon itself to form super-

imposed outwardly opening grooves, pairs of U-shaped spring supporting bars having the opposite walls at the ends thereof brought together and bent to form hooks of double thickness adapted to rest upon the top of the base frame and hook into the uppermost groove, springs mounted on said bars, and an upholstering covering including a skirt having its marginal edge secured in the lowermost groove of the base frame.

1,460,602. EGG-TURNING ATTACHMENT FOR INCUBATORS. SOLOMON PETERMAN, Nevada, Iowa. Filed Apr. 18, 1922. Serial No. 555,336. 2 Claims. (Cl. 119-44.)

1. An egg-turning attachment for incubators, comprising a tray having a screen bottom, slats mounted for oscillation in said tray and adapted to engage said bottom alternately by their side margins, each tray being formed with egg-carrying seats adapted to hold eggs with their longest diameters at angles to said bottom.

1,460,603. ENVELOPE-FEEDING MECHANISM. CLAUDE L. POST, Chicago, Ill. Filed Aug. 31, 1921. Serial No. 497,220. 15 Claims. (Cl. 271-2.)

1. In an envelope handling device of the kind described and in combination, an envelope magazine, printing rolls, means for turning the flaps of successive envelopes on their line of fold and extending them in the direction of said rolls, and means for intermittently jogging said envelopes.

1,460,604. BATTERY CONNECTOR. CLARENCE E. POTTER, Baltimore, Md. Filed Feb. 17, 1921. Serial No. 445,652. 2 Claims. (Cl. 173-324.)

1. In a battery connector, an insulating body to extend across a plurality of battery cells, conductor elements extending laterally from said body and having their

inner ends embedded therein and their outer ends constructed to engage battery-cell binding posts, bridging members of conducting material embedded in the insulating body and connecting the inner ends of some

conductor elements, and means extending through the insulating body to secure the bridging members and the inner ends of conductor elements within said body, said means serving also to connect circuit conductors to said elements.

1,460,605. AUTOMOBILE SLEIGH ATTACHMENT. JAKOB RANTASÄ, Vienna, Austria. Filed Apr. 3, 1920. Serial No. 371,135. 6 Claims. (Cl. 180—5.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A sleigh attachment for motor vehicles, comprising a pair of levers each pivotally mounted at a point intermediate its ends, a traction unit mounted between said levers near one end thereof, means for raising and lowering the opposite end of the levers and thereby raising or lowering the traction unit, and runners pivotally mounted on the pivotal axis of said levers.

1,460,606. PROCESS FOR MANUFACTURING CONDENSATION PRODUCTS. KURT RIPPER, Vienna, Austria, assignor to Fritz Pollak, Vienna, Austria. Filed Sept. 9, 1922. Serial No. 587,221. 13 Claims. (Cl. 260—3.)

1. The process for manufacturing condensation products from an urea with formaldehyde which consists in retarding the gelatinization of the initial condensation products soluble in water by the addition of salts showing alkaline reaction on hydrolysis.

1,460,607. CLEANING STICK. HOWARD W. ROUTSON, Oakland, Calif. Filed Mar. 2, 1922. Serial No. 540,620. 4 Claims. (Cl. 15—209.)

1. A cleaning stick comprising a tube, and a body of cleaning material frictionally held in said tube and adapted to be protected from one end thereof, said

cleaning body comprising a soap stick, steel wool wound on said soap stick, and a fabric binder over said steel wool.

3. A cleaning stick comprising a tube and a body of cleaning material frictionally held in said tube and adapted to be projected from one end thereof, said cleaning material comprising a body of spirally wound steel wool and a fabric binder over said steel wool.

1,460,608. SHOE LINER. CHARLES A. L. SAUNDERS, Elgin, Ill. Filed Dec. 9, 1921. Serial No. 521,167. 16 Claims. (Cl. 12—39.)

1. In a device of the kind described and in combination, a jack, suction means for holding a shoe lining thereon, and means for releasing said lining when the sheet is properly positioned on the jack.

1,460,609. DOOR LOCK. LUIGI SCOLA, Newcastle, Wash. Filed Feb. 13, 1922. Serial No. 536,129. 2 Claims. (Cl. 292—144.)

1. A door lock, comprising a plate, a guide mounted on the plate, a bolt slidably between the guide and plate, a cylinder mounted on the plate, a piston mounted for reciprocating movement in the cylinder, and a rod rigidly connecting the piston and the bolt, and means remote from the cylinder for exerting a pressure on the piston for projecting the bolt and creating a suction thereon for retracting the bolt.

1,460,610. MAP AND RECORD HOLDER. CHARLES H. SEEBEE and GEORGE C. BERLIN, Caldwell, Idaho. Filed Sept. 14, 1922. Serial No. 588,197. 3 Claims. (Cl. 40—13.)

1. A map or the like holder comprising a supporting base, map retaining means on the base, a jaw member movably supported on the base, a second jaw movably carried by the first jaw, means for adjusting the jaws toward and away from each other, and means for adjusting the jaws toward and away from the base.

1,460,611. CONE MAKING MACHINE. JOSEPH SHAPIRO, Baltimore, Md. Filed Aug. 29, 1919, Serial No. 320,620. Renewed May 18, 1923. 4 Claims. (Cl. 107—58.)

1. In a cone making machine, a support, a plurality of cores thereon, a slide rigidly secured to said support at right angles thereto, a plurality of guideways for said slide, a roller pivotally mounted on said slide below said guideways, and means for engaging said roller to raise said support and cores.

4. In a molding machine, a pair of vertically disposed horizontally slidable cooperating mold sections, a pair of cranks mounted on opposite sides of said sections substantially central of their top and bottom faces, a plurality of straight fingers on each crank having slightly rounded ends to engage the body of each section to force them into contact with each other, said fingers, when the molds are closed, each pointing toward the axis of the opposite crank.

1,460,612. EMBROIDERY MACHINE. GOTTWALT SIEBER, Plauen, Germany. Filed Jan. 27, 1923. Serial No. 615,293. 5 Claims. (Cl. 112—90.)

1. In a device for exchanging portions of fabric upon embroidery machines in the manufacture of long embroideries in steps, the combination, with the movable frame of the embroidery machine, of an adjusting bar provided at said frame, and a directive hand provided at said bar, substantially as described.

1,460,613. WATER-SUPPLY SYSTEM FOR DWELLINGS AND THE LIKE. CAROLINE A. SILL, Oklahoma, Okla. Filed Feb. 20, 1922. Serial No. 537,685. 5 Claims. (Cl. 137—9.)

1. Means for supplying water to the plumbing system of a house, comprising an elevated tank connected to said plumbing system and located in proximity to the eaves-trough or gutter of the house, said eaves-trough being provided with the usual down-take conductor, a pipe leading from the eaves-trough to the tank, said pipe being provided with an inlet valve normally cutting off the passage of water therethrough to the tank, and a valve for the down-take conductor; whereby, on the occurrence of rainfall, the valve of the down-take conductor may be opened to permit the discharge of the initial body of rain water to waste together with the impurities which accompany it from the roof and eaves-trough, and whereby on closing said valve and opening the valve governing the supply to the tank, the tank will receive the secondary supply of rain water uncontaminated by said impurities; substantially as described.

1,460,614. AUTOMOBILE DOOR OPENER. CHARLIE J. SMITH, Jr., Henderson, N. C. Filed May 19, 1921. Serial No. 471,006. 1 Claim. (Cl. 292—164.)

The combination with an automobile door having a latch provided with an upstanding releasing lever at the inner side of the door, of an abutment secured upon the inner face of the door adjacent the upper end of said lever, a bearing secured upon the upper edge of the door

and extending transversely thereof, a rod extending through the bearing and having its end portions bent to provide a rocker shaft journaled in the bearing and extending beyond the inner and outer sides of the door and arms extending in depending relation from the ends of the rocker shaft, the inner arm extending between the abutment and the upper end portion of said lever and having its free end portion bent to extend transversely of the lever, a roller upon the bent end portion of the inner arm and engaging said lever, the outer arm of said rocker shaft constituting an actuating arm for turning the rocker shaft and swinging the inner arm to move the lever to a latch-releasing position.

1,460,615. RECLAIMING BUCKET. DANIEL E. STAIR, Elkhart, Ind. Filed Aug. 17, 1922. Serial No. 582,482. 11 Claims. (Cl. 37—184.)

1. In a clam-shell bucket, a pair of coating bucket members hingedly connected together, a lever arm connected to each bucket member, and means carried by the lever arms adapted to detachably engage the bucket above its center of gravity whereby when supported by said means, the bucket is closed by gravity, said means being adapted to disengage the bucket to permit the bucket to open when the weight of the bucket is taken from said means.

1,460,616. FIGURE WHEELED TOY. ERNEST STARBUCK, Peoria, Ill. Filed May 9, 1921. Serial No. 468,104. 4 Claims. (Cl. 46—45.)

1. The combination, in a toy, of a body simulating a fowl and including supporting wheels, a neck portion pivoted to the body including a head portion, a bill portion pivoted to the head portion, a pitman operatively connected at one end with the wheels and at its other end attached to the neck for imparting movement to the latter, a member disposed within the neck portion and adapted to have endwise movement therein and at one end adapted to engage the pivoted bill portion, and a member secured to the body having a curved surface disposed adjacent the pivot of the neck portion, the other end of the first named member engaging the said curved surface.

1,460,617. STUMP REMOVER. BUFORD J. STEEN and WILLIAM O. MARTIN, Christine, Tex. Filed Feb. 13, 1922. Serial No. 536,303. 1 Claim. (Cl. 143—85.)

A device of the character described including an axle, carrier wheels supporting the same, standards adjacent said wheels and upstanding from said axle, a vertically adjustable bearing on each standard, tracks secured to said bearings forming a supporting framework, and whose rear ends are formed into handles, a motor frame mounted to move on said tracks, a motor carried by said frame having a forwardly projecting drive shaft, a fly wheel fixed on said shaft, a tubular saw fastened to the forward end of said shaft, a cut away portion in one side of said saw, frames fixed on said tracks near their rear ends, a rotatable drum shaft mounted in suitable bearings carried by said frame, a drum fixed on the drum shaft between said tracks, a cable attached at one end to the motor and whose other end is wound around the drum, means for rotating the drum in one direction, and means for locking said drum against rotation in the other direction.

1,460,618. HAND STOKER. FREDERICK C. STIMMEL, Chattanooga, Tenn., assignor to The Casey-Hedges Co., a Corporation of Ohio. Filed Apr. 5, 1922. Serial No. 549,913. 11 Claims. (Cl. 110—39.)

9. In a stoker, a progressive feed grate having alternating stationary and rocking transverse grate bars, the latter bars being normally arranged as a series of horizontal steps, the stationary bars being inclined, and both kinds of bars being slotted for the purpose specified.

1,460,619. ADVERTISING DEVICE. HENRY W. SUMNER, Seattle, Wash. Filed Mar. 19, 1921. Serial No. 453,648. Renewed Mar. 1, 1923. 11 Claims. (Cl. 40—30.)

1. A device of the class described comprising an upright frame, a roller receiving magazine at each end of said frame, spring rollers arranged to be removably held by said magazines, a display curtain arranged to wind on each of said spring rollers, one end of each display curtain being secured to its roller and the other end being secured to the magazine, a traveler bar disposed transversely of said frame and movable lengthwise thereof and

arranged to successively pick up the rollers and display the curtains by moving the rollers away from the maga-

zines and then returning the said rollers to the magazines, and an endless driven cable connected with both ends of said traveler bar for moving the same.

1,460,620. AUTOMOBILE SIGNAL. RICHARD TAEUBERT, Holyoke, Mass. Filed May 29, 1919. Serial No. 300,793. 3 Claims. (Cl. 116—47.)

1. A traffic signal consisting of a frame adapted to be secured to wind-shield or vehicle part and provided with a non-rotatable member having notches in its edge radially spaced from each other, a pivot extending through said member, an indicator carried by said pivot and provided with a pin to engage either one of said notches, a spring for holding the pin engaged with either notch to retain the indicator in selected position.

1,460,621. APPARATUS FOR MANUFACTURING LIME SULPHUR. ROKUJIRO TAKI, Abe-Gun, Shizuoka-Ken, Japan. Filed Feb. 18, 1921. Serial No. 446,111. 2 Claims. (Cl. 23—13.)

1. An apparatus for manufacturing lime sulphur comprising a horizontally disposed pressure-proof rotatable tank provided with a filling opening, a cover for said opening, trunnions fixed at both ends of said tank, means for supporting said trunnions, means for rotating said tank, a steam pipe extending through one of said trunnions and having a normally stationary U-shaped perforated portion normally arranged in the lower portion of said tank in order to discharge steam into the material beneath the level of said material, said U-shaped portion being pivotally mounted in said tank to permit said U-shaped portion to be moved to and maintained in a

position at the upper portion of the tank during the rotation of the tank for cooling the contents, and a gas discharge pipe having its inner end opening into the upper portions of the interior of the tank and its outer end arranged exteriorly of the tank.

1,460,622. POWER-TRANSMITTING DEVICE. ARTHUR E. THOMPSON, Utica, N. Y., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 2, 1921. Serial No. 458,008. 6 Claims. (Cl. 192—11.)

1. A power transmitter including in combination, a support, a driving pulley mounted thereon and having belt gripping devices, and manually operated means for causing said belt gripping devices to engage and drive the belt.

5. A power transmitter including in combination, a supporting shaft, a member mounted to rotate freely on said shaft and held from endwise movement thereon, said member having an outwardly projecting flange, a cylindrical laterally projecting portion, a driving pulley freely mounted on said shaft and capable of endwise movement thereon, said driving pulley having a cylindrical recess adapted to freely receive the cylindrical projection on said rotatable member, a spring for normally separating the driving pulley and rotatable member, said driving pulley and rotatable member having projecting flanges with faces inclining outwardly and away from each other between which the belt to be driven runs, and manually controlled means for moving the driving pulley so that the belt may rest freely on the cylindrical projection when the belt is idle and so that said belt may be gripped and driven by the inclined flanges when desired.

1,460,623. COUPLING HEAD AND METHOD OF MAKING SAME. VICTOR T. TOBOLLA, Chicago, Ill., assignor to William L. Read and Charles F. Read, both of Chicago, Ill. Filed Nov. 11, 1920. Serial No. 423,346. 12 Claims. (Cl. 285—63.)

1. A coupling head, comprising a body having a port extending therethrough and surrounded by an annular gasket seat, said seat including a ring of non-corrodible metal embedded in and having its inner and outer circumference embraced by the metal of said body.

1,460,624. INSULATING CAP FOR ELECTRICAL-CABLE JOINTS. FREDERIK MARINUS VAN GELDEREN, Enschede, Netherlands. Filed Mar. 3, 1923. Serial No. 622,641. 9 Claims. (Cl. 173-268.)

9. The combination with a hollow insulating cap for the bare ends of electrical conductors, said cap being internally screw-threaded, a coil of wire within said cap, said coil comprising two substantially conical sections apex to apex, the widest turn of one of said sections being in engagement with the threads of the cap adjacent the bottom of the same, the remaining portions of the coil being out of contact with the wall of the cap before application of the cap to the conductor, but expandible into engagement with the threads of the cap when the latter is applied to the conductor, the force of the engagement between the coil and the conductor being greater than the force of the engagement between the coil and the cap, whereby when the cap is unscrewed from the conductor the coil remains on the latter.

1,460,625. AUTOMOBILE SIGNAL. JOSEPH R. VIL-LARD, Rochester, N. Y. Filed Aug. 28, 1922. Serial No. 584,629. 4 Claims. (Cl. 116-52.)

1. In an automobile signal, the combination of a base, a pair of toggle levers mounted to swing on said base, a signal arm pivoted between said toggle levers and intermediate thereof, a push rod pivoted to the free end of said toggle levers and making contact with the inner or under edge of said signal arm, said push rod being adapted to be moved to swing said toggle levers with said signal arm on said base until said push rod slides under the end of said signal arm and allows said signal arm to rest on top of said push rod which then forms a supporting bracket for said signal arm to hold it in a horizontal position.

1,460,626. VEHICLE SIGNAL. GEORGE F. WARNER, Ennis, Tex. Filed June 10, 1922. Serial No. 567,357. 4 Claims. (Cl. 116-47.)

1. A signaling device for vehicles comprising an indicator pivoted for horizontal swinging movement above the

hood of a vehicle, a support carried by the windshield and having a bearing for said indicator, a control lever mounted within the vehicle and having an operative connection with said indicator whereby to swing the latter, said indicator being formed of sections hingedly connected by a rule joint whereby the foremost section may be swung upwardly into vertical position out of obstructing relation to the hood to permit opening of the latter.

1,460,627. PRECISION INSTRUMENT FOR AIR-PLANES, ETC. IRA A. WEAVER, Springfield, Ill. Filed Aug. 3, 1918. Serial No. 248,182. 29 Claims. (Cl. 88-1.)

1. In an appliance of the character described, the combination of a gyroscopically controlled sight, an adjustable sight-piece adapted to be brought into register with said gyroscopic-sight, and a telescope angularly adjustable relatively to said sight-piece, substantially as described.

1,460,628. SAFETY LOCOMOTIVE-CAB VALVE. PETER WERTZ, Pittsburgh, Pa. Filed Nov. 16, 1921. Serial No. 515,649. 4 Claims. (Cl. 251-45.)

1. A valve comprising a casing provided with a passage therethrough, oppositely extending threaded nipples thereon, a valve seat formed at the extremity of one of said nipples, a rod having cleaning wings fitting the said passage and formed with a valve head at one end cooperating with the seat and projecting beyond and through an opening in a cap threaded on the other nipple, said rod having a shoulder against which the cap abuts to open the valve, and a head on the rod beyond the cap with which the cap contacts to lock the valve to its seat, the distance between said shoulder and head being greater than the thickness of the cap to provide a lost motion connection between the cap and rod.

1,460,629. SWITCH. MERLE J. WEST, Milwaukee, Wis., assignor, by mesne assignments, to H. W. Le Mahieu, Oostburg, Wis. Filed Mar. 10, 1921. Serial No. 451,153. 2 Claims. (Cl. 200-159.)

2. In a circuit closer, the combination of a metal base member having a recess, binding posts for securing the ends of the conductor wires within said recess, one of

said posts being insulated from said member, a resilient plate within the recess and detachably secured at one end to said base member and having its free end movable into

contact with said insulated binding post, an actuating pad having its base fitting in said recess, and a detachable slip-on interlocking connection between said pad and plate.

1,460,630. OIL BURNER. ROBERT W. WIEDERWAX, Atlantic City, N. J., assignor to Geist Manufacturing Company, Atlantic City, N. J., a Corporation of Delaware. Original application filed July 25, 1921, Serial No. 487,534. Divided and this application filed Apr. 13, 1922. Serial No. 552,268. 4 Claims. (Cl. 158-53.)

4. A burner comprising a casing forming a combustion chamber, a nozzle arranged adjacent the rear of said combustion chamber, the walls of said casing converging vertically forwardly of said nozzle and diverging horizontally to provide a broad outlet of restricted height, a vaporizing retort surrounding the forward end of said casing, said retort terminating at substantially the point where the flame from said nozzle strikes the wall of the combustion chamber, means for conveying fuel to said retort, and means for conveying vaporized fuel from said retort to said nozzle.

1,460,631. BURNER. ROBERT W. WIEDERWAX, Atlantic City, N. J., assignor to Geist Manufacturing Company, Atlantic City, N. J., a Corporation of Delaware. Filed June 2, 1922. Serial No. 565,339. 6 Claims. (Cl. 158-56.)

6. A burner for liquid fuels comprising a substantially tubular burner casing having open ends, a retort surrounding the rear of said casing, a preheater surrounding said casing forwardly of said retort, a burner pipe arranged adjacent the rear of said casing, a jet arranged in said burner pipe, a pipe connecting said jet to said

preheater to deliver heated fluid to said jet, a branch pipe extending from said burner pipe intermediate the ends of said jet, and a pipe connecting said branch pipe to said retort.

1,460,632. CENTERING CEMENTING SHOE. WILSON B. WIGLE and WALTER HUGHES, Long Beach, Calif. Filed June 28, 1922. Serial No. 571,516. 6 Claims. (Cl. 166-9.)

1. A cement centering fitting for casing comprising a tubular body adapted to be mounted on the casing, said body being provided with spacing vanes projecting therefrom.

1,460,633. ROPE CLAMP. JOHN B. WOODBURY, South Portland, and GEORGE C. SOULE, Portland, Me. Filed Mar. 22, 1922. Serial No. 545,847. 1 Claim. (Cl. 24-135.)

In a rope clamp, the combination of a U-shaped bolt, a base plate, a U-shaped bearing plate embraced by said bolt and bent outward at its lower ends to form retaining flanges, said base plate and flanges having openings for the passage of said bolt and tightening means for said bolt.

1,460,634. DRAFT REGULATOR. CLAUDE H. ABBOTT, Lisbon, N. Dak. Filed Jan. 24, 1921. Serial No. 439,581. 5 Claims. (Cl. 236-103.)

5. In a draft regulator, a lever provided at its free end with a lateral extension providing an axle, a drum

rotatable on the axle, a stop on the free end of the axle, a dial surrounding the inner end of the axle, a pointer carried by the drum and co-operable with the graduations on the dial, and a coiled spring surrounding the axle between the drum and the dial to hold the drum in various set positions.

1,460,635. ELEVATOR DUMP. ISAAC S. ALTON, Oxford, Kans. Filed Sept. 25, 1922. Serial No. 590,502. 3 Claims. (Cl. 193—31.)

1. A distributing dump comprising a platform having spaced openings, a partition beneath said platform and between said openings, chutes extending from said openings in opposite directions and extending across said partition for depositing material upon the opposite sides of the partition, each chute having an opening beneath the opening in the platform from which the chute extends, and a cover movable from a lowered position closing the opening to an elevated position forming a barrier extending across the chute for directing material through the opening in the chute.

1,460,636. WAVEMETER. PIERRE JULES ARMAGNAT, Paris, France. Filed Aug. 9, 1920. Serial No. 402,396. 1 Claim. (Cl. 250—39.)

Apparatus for use in measuring the lengths of continuous electric waves, said apparatus comprising a circuit containing a coil, a second coil and an adjustable non-inductive resistance, a calibrated oscillating circuit having a condenser and a coil in inductive relation with the coil, and a circuit containing a coil in inductive relation to the coil, a buzzer, detector, telephone and the non-inductive resistance.

1,460,637. SHUTTLE-OPERATING MECHANISM. ALFRED AULETTA, Bayonne, N. J., assignor of one-third to Peter Paris, Bayonne, N. J. Filed May 27, 1922. Serial No. 564,089. 8 Claims. (Cl. 139—146.)

2. In a shuttle operating mechanism the combination of a bracket plate, means to swing the plate, a picker

stick pivoted to the plate, a shaft journaled to the plate, a gear fastened to the shaft, a contact arm ex-

tending from the shaft, a stop plug, means to locate the stop plug in the path of the contact arm.

1,460,638. PROCESS AND APPARATUS FOR COKING THE DISCHARGED MATERIAL FROM LOW-TEMPERATURE DISTILLATION APPARATUS. EDWARD BARRS, London, England. Filed Dec. 22, 1921. Serial No. 524,155. 7 Claims. (Cl. 202—8.)

1. In apparatus for coking fuel and for the production of gas, the combination with a tubular retort in the form of a conduit through which fuel can be fed continuously, at least one heating jacket surrounding a portion of said conduit, and means for supplying a heating medium to the heating jacket, of at least one gas-withdrawing jacket that surrounds another portion of said conduit, which latter portion has in its wall a plurality of ports that put the gas-withdrawing jacket into open communication with the interior of said conduit, and means for conducting gas away from the gas-withdrawing jacket.

1,460,639. COMBINED FIELD OVEN AND COOKING UTENSIL. BERNARD L. BRADDICK, Washington, D. C. Filed July 15, 1922. Serial No. 575,316. 2 Claims. (Cl. 53—6.)

1. In a combined field oven and cooking utensil, the combination with a pair of complementary pan sections, one being inverted over and engaging the other, means for latching said pan sections together, each pan section having its marginal flange provided with a cylindrical portion, a perforated steamer plate, bracket plates

secured to the under face of the steamer plate and having lateral arms to engage the cylindrical portion of one of the pan sections, and provided with downwardly extending legs to engage the bottom of one of the pan sections, to support the steamer plate.

1,460,640. METHOD AND MACHINE FOR PLANING HELICAL TEETH, MORE PARTICULARLY FOR BEVEL GEARS. HEINRICH BRANDENBERGER, Vienna, Austria. Filed Jan. 5, 1921. Serial No. 435,268. 4 Claims. (Cl. 90-9.)

1. The method of planing helical teeth, consisting in proportioning the ratio of the number of strokes of the cutting tool to the number of revolutions of the constantly rotating work so that the cutting tool misses a number of pitch intervals.

3. In a planing machine for making bevel gear wheels with helical teeth, tool slide guides, tools and tool receiving heads adjustable in a circular arc about an axis perpendicular to their line of motion in such a manner that the direction of the tools to the line of motion of the tool heads may be altered without changing the cutting edges of the tools from their positions substantially centrally of the arc.

1,460,641. DETACHABLE CIGAR BAND. ERNEST L. BROOME, Tarrytown, N. Y. Filed May 25, 1922. Serial No. 563,639. 4 Claims. (Cl. 40-21.)

1. The combination with a cigar, of a band, and a substance sensitive to heat at a low temperature for fastening the band upon the cigar, said substance being melted when subjected to heat from the cigar when lighted.

1,460,642. BOOKRACK. LUTHER DOYLE CADENHEAD, McKinney, Tex. Filed July 17, 1922. Serial No. 575,731. 1 Claim. (Cl. 45-53.)

An adjustable book rack comprising a base composed of two sections, slidably connected, and two end walls, one end wall being rigidly connected to an end of one of the sections, the other end wall being slidably connected to the other section for adjustment therealong and means for holding the said end wall against adjustment on the said section.

1,460,643. CEMENTITIOUS COMPOSITIONS SUITABLE FOR FLOORING, PAVING, AND SO FORTH. CHARLES F. CURTIS, London, England. Filed Aug. 22, 1921. Serial No. 494,370. 4 Claims. (Cl. 106-24.)

4. A cementitious composition comprising a mixture of coke breeze, sand, wood dust in substantially equal proportions, about one-third the quantity of plaster of Paris, about double the quantity of Portland cement, and water in which a small quantity of alum has been dissolved.

1,460,644. CHANGEABLE-COLOR SPOTLIGHT. JAMES MARTIN DOLLISON and CLAUDE EUGENE SMITH, Columbus, Ohio. Filed June 8, 1922. Serial No. 566,737. 3 Claims. (Cl. 240-3.)

1. In a device of the character described, a casing having an opening at one end and being adapted to support a light emitting element therein, means within the casing for projecting rays of light from the light emitting element through the opening, a color disk rotatably supported in eccentric relation to the opening in the casing and having a plurality of translucent portions of different colors arranged in an annular series between its axis of rotation and its periphery, in position to be successively interposed between the light emitting element and the opening as the color disk is rotated, a lamp stand supporting the casing in vertical position with the end having the opening therein uppermost, a lamp shade encompassing the casing, and an inverted conical reflector within the lamp shade above the casing having the opening for reflecting rays of light upon the lining of the lamp shade.

1,460,645. WINDOW PROTECTOR. LEE W. DUNCAN, Fort Wayne, Ind. Filed May 22, 1922. Serial No. 562,664. 2 Claims. (Cl. 20-40.)

1. A window protector comprising a support formed with an opening in one of its ends, a shank adapted

for slidable and removable engagement within the opening, resilient means for engaging a pane of glass carried by the shank, and means arranged on the shank between the end of the support and the resilient pane engaging means for adjusting the position of the shank with respect to the support whereby to adjust the pressure of the resilient means upon the pane of glass.

1,460,646. ICE MANUFACTURE. RIDSDALE ELLIS, Oak Park, Ill. Filed Jan. 20, 1919. Serial No. 272,212. 12 Claims. (Cl. 62-172.)

1. The process of making raw water ice which includes subjecting the water to softening treatment to eliminate calcium and magnesium salts then adding a substance adapted to increase materially the solubility of the calcium and magnesium compounds remaining in the water after the softening treatment and then freezing the water so treated.

1,460,647. DEVICE FOR PERFORATING PAPER. ISRAEL H. FRUCHTER, New York, N. Y. Filed Sept. 21, 1921. Serial No. 502,105. 2 Claims. (Cl. 164-118.)

1. In a perforating device, a plurality of reciprocative plunger-dies adapted to be vertically moved by pressure, and a follower for holding said dies, adjustable sleeve-bearings for said dies, means for mounting said bearings and means for fixing said bearings in spaced relation, and a plurality of pierced die-plates having their openings in register beneath said plunger-dies, and a table for carrying a plurality of sheets to be perforated by said plunger-dies, and means for fixing said sheets over said die-plates, and means for guiding and gaging said sheets comprising a reciprocating slide, and means for actuating said slide and means for mounting and supporting the said parts.

1,460,648. METHOD OF PURIFYING GARLICKY WHEAT. JOHN E. GASKILL, St. Louis, Mo. Filed May 23, 1919. Serial No. 299,289. 7 Claims. (Cl. 83-28.)

1. The method of purifying normal wheat of its associated green garlic, comprising, immersing the grain and its garlic impurity in their normal states in a

liquid of a suitable specific gravity so as to cause the impurity to separate from the grain by flotation, and separately withdrawing the grain and impurity so separated.

1,460,649. WIRE STRETCHING AND TYING MACHINE. ALEC J. GERRARD, Chicago, Ill. Continuation of application Serial No. 282,390, filed Mar. 13, 1919. This application filed May 13, 1920. Serial No. 381,165. 17 Claims. (Cl. 140-93.)

1. In a portable wire twisting machine, the combination of a frame provided with a slot; rearwardly extending means rigid with said frame; forwardly extending means rigid with said frame; a wire twisting means having a slot adapted to register with the slot of said frame and disposed between said first and second named means, said first and second named means having dimensions adapted to prevent the machine from tilting during its operation and said second named means being provided with a tapered surface forming a continuation of one side of the slot with which said frame is provided and adapted to facilitate the placing of the wires to be twisted in said first and second named slots, substantially as described.

1,460,650. CORKING MACHINE. SCOTT GILLESPIE and FREDERICK L. SHELOR, Salem, Va.; said Shelor assignor to International Filler Corporation, Petersburg, Va., a Corporation of Virginia. Filed June 15, 1920. Serial No. 389,254. 12 Claims. (Cl. 83-92.)

1. In a mechanism of the character described, a stationary member, and a cooperable movable member, said members having adjacent edges spaced apart horizontally to provide a slot of a uniform width, said edges being so arranged relatively to one another and the slot being of such a width that the smaller ends of tapered articles disposed between said members will pass down through said slot with the larger ends of the articles uppermost and supported by said edges and with the articles in rolling abutment against said edges, in order that such articles will be given a rolling motion about their axes between said edges with the axes of the articles disposed vertically, the stationary member having a notch in said edge thereof for releasing the articles to drop downwardly.

- 1,460,651. CAM. ROBERT FREDERICK HALL, Moseley, near Birmingham, England. Filed Nov. 5, 1920. Serial No. 422,048. 11 Claims. (Cl. 74-1.)

1. A cam mechanism including a supporting structure, means forming an operating surface for a cam comprising a series of eccentrically pivoted tappets, and operating means for rotating the tappets to vary the operating surface.

- 1,460,652. WELL ELEVATOR. HU M. HARRIS, Chattanooga, Tenn., assignor to Lucey Manufacturing Corporation, Chattanooga, Tenn., a Corporation of Tennessee. Filed Jan. 11, 1921. Serial No. 436,468. 8 Claims. (Cl. 294-90.)

1. In a well elevator comprising a body and a gate hinged at one end to the body, the combination of a catch, a latch adapted to engage said catch when the gate is closed, and means for locking said latch in closed position, said locking means being spaced from said latching mechanism and operable by the load imposed on the elevator.

- 1,460,653. HAIR-WAVING MACHINE. JOHN MARTIN HIGGINS, Sacramento, Calif. Filed Nov. 20, 1922. Serial No. 602,195. 5 Claims. (Cl. 132-31.)

5. Means for producing a Marcel wave or the like comprising a comb consisting of a curved band adapted to transversely lie on the front portion of the head and a plurality of waved teeth extending rearwardly therefrom, said teeth being curved to follow the outline of the head, and a heating element hingedly secured to the comb having a waved bottom surface registering with the waves of the teeth.

- 1,460,654. INSULATED HANDLE FOR TOOLS. CHARLES P. L. HUSTON, Plainfield, N. J. Filed Apr. 2, 1919, Serial No. 286,917. Renewed Aug. 4, 1922. Serial No. 579,772. 12 Claims. (Cl. 16-116.)

1. In a device of the class described, in combination, an insulated handle adapted to be used in connection with the shank of a tool, and resilient means associated with and mounted within said handle for gripping said shank.

- 1,460,655. COMBINATION CUTTING AND WELDING TORCH. ALEXANDER F. JENKINS, Baltimore, Md. Filed Aug. 11, 1919. Serial No. 316,640. 3 Claims. (Cl. 158-27.4.)

1. In a torch of the class described, conduits for gases including a conduit for cutting oxygen, a valve movable transversely of the handle for controlling the passage of fluid through said conduit, said valve having a projecting stem, a spring normally tending to close the valve, a pivoted lever adapted to be forced against the valve stem, to open the valve, a button slidably secured to the pivoted lever and provided with a latch, said valve stem bearing against the lever at a point intermediate its pivotal axis and said button and a tubular handle surrounding the gas conduits and said valve, the handle being slotted for the pivoted lever and the end wall of the slot serving as a catch for the latch secured to the button.

- 1,460,656. TRACK BELT FOR MOTOR VEHICLES. ADOLPHE KÉGRESSE, Paris, France. Filed Mar. 30, 1921. Serial No. 457,110. 2 Claims. (Cl. 305-10.)

1. A track belt for automobiles, comprising an endless band of rubberized fabric having on its inner surface an

endless line of integral blocks spaced midway between the edges thereof and adapted to engage the peripheral surfaces of the driving wheels around which the belt is to pass, so as to guide the belt in its movements; said belt having on each side of said line of blocks a continuous, plane portion for engagement by the guide rollers which distribute the load over the driving stretch of the belt, and having on its outer surface continuous, integral tread projections forming track rails and integral ground gripping projections, the rail-forming projections on the outer surface of the belt being located opposite the plane portions of the inner surface.

- 1,460,657. ANTISLIPPING ATTACHMENT FOR VEHICLE TIRES. ROBERT R. KINTZ, Meriden, Conn. Filed Mar. 24, 1922. Serial No. 546,386. 3 Claims. (Cl. 152—14.)

3. An anti-slipping device for vehicle tires, comprising a saddle, including a plate, and inwardly-projecting arms, means for connecting a series of saddles, said plates formed at opposite ends with angular flanges and with centrally-arranged angular flanges, said plates also formed with a series of threaded openings for the reception of calks.

- 1,460,658. RABBLING ARM FOR ROASTING FURNACES. DUDLEY BAIRD, Berkeley, Calif., assignor to General Chemical Company, New York, N. Y., a Corporation of New York. Filed Feb. 5, 1920. Serial No. 356,553. 3 Claims. (Cl. 257—119.)

2. A rabble arm construction of the type described comprising an external tubular member, an internal tubular member projecting beyond the inner end of said external member, radially-extending devices spaced from each other on one of said members near the inner end thereof for supporting said internal member within the external member and spaced from the walls thereof, said devices projecting beyond the inner end of said external member, and a joint-forming member carried by the outer ends of said devices.

- 1,460,659. BOOT AND LINER FOR AUTOMOBILE AND SIMILAR CASINGS. JAMES L. D. BLEVANS, Dallas, Tex. Filed Nov. 30, 1920. Serial No. 427,447. 1 Claim. (Cl. 152—24.)

A boot for a tire casing having beads, metal hooks arranged upon the outer faces of the boot near its edges,

each hook comprising an inner portion to engage the inner face of the bead, a base carried by the inner portion engaging the bottom wall of the bead, and an outer flange projecting upwardly from the base to engage the outer face of the bead, said hooks having interlocking engagement with the beads whereby the boot is held securely connected to the beads when the beads are spread during the insertion of the inner tube.

- 1,460,660. CONVEYER DEVICE FOR LAUNDRY ASSORTING AND MARKING BOOTHS. CHESTER W. CANINE, Cincinnati, Ohio. Filed Feb. 14, 1921. Serial No. 444,856. 10 Claims. (Cl. 186—14.)

1. The combination with a series of laundry marking and assorting booths having frames, of a conveyer frame attached to and forming part of the adjacent booth constructions, an endless conveyer mounted therein, a top member supported on the frame above the conveyer, and a side wall supported on the frame above the conveyer, the side wall adjacent to the booths being provided with a series of openings, one for each booth, through which material may be passed from the boots upon the conveyer, for the purposes stated.

- 1,460,661. FLEXIBLE GEARING. MARCEL DE CONINCK, Le Havre, France. Filed June 8, 1920. Serial No. 387,384. 4 Claims. (Cl. 74—29.)

1. A gear wheel formed of a plurality of toothed disks keyed to the same shaft, the teeth of these disks being flexibly mounted with respect to the body of said disk and having also an elastic connection with neighboring teeth of the same disk so as to be capable of a peripheral displacement of the same order of magnitude as that due to the torsion or flexion of the wheel for small differences in the value of the tangential force on the different disks.

transfer pipe receiving said liquid after measurement and delivering the same into mixing relation to the air flow

in said intake and means independent of the engine suction for forcibly atomizing the liquid delivery from said pipe.

1,460,668. INTERNAL-COMBUSTION ENGINE. JOHN GOOD, Brooklyn, N. Y., assignor to Good Inventions Co., New York, N. Y., a Corporation of New York. Filed May 9, 1919. Serial No. 295,952. 4 Claims. (Cl. 123—196.)

1. In an internal combustion engine, a water-jacket or water jackets surrounding the cylinder combustion space or spaces, a passage alongside the cylinder or cylinders between the water-jacket and the crank case, and means independent of the combustion in the engine for passing a heating medium through said passage.

1,460,669. BOILER-TUBE CLEANER. JOHN H. GOOD-FELLOW, Buffalo, N. Y. Filed Nov. 3, 1919. Serial No. 335,266. 5 Claims. (Cl. 122—390.)

1. A boiler tube cleaner comprising a hollow body, spiral flanges arranged in spaced relation on the outer face of said body, and a nozzle arranged at the front end of said body and provided with a plurality of forwardly diverging jet openings for the passage of the cleaning medium therethrough, the outlet ends of said openings being flared and located in the sides of said nozzle and immediately in front of the spaces between said flanges.

1,460,670. GAME APPARATUS. NOAH S. HARTER, Waukegan, Ill., assignor of one third to George F. Rummel and one third to A. T. Weaver, both of Chicago, Ill. Filed May 18, 1921. Serial No. 470,569. 4 Claims. (Cl. 46—4.)

1. A device of the character described comprising a frame; an impact indicator; an inertia weight and a fabric target tensioned by the inertia weight and the indicator and supported on the frame.

1,460,671. EXCAVATING MACHINE. WILHELM HEB-SACKER, Heilbronn, Germany. Original application filed June 17, 1920, Serial No. 389,780. Divided and this application filed May 17, 1921. Serial No. 470,313. 15 Claims. (Cl. 262—7.)

1. An excavating machine comprising a non-rotatable body, a rotary cutter head in front of said body, a propelling device projecting laterally from the body to engage the bore of the excavation and movable forward and rearward relatively to said body, and means for moving said device alternately in opposite directions.

1,460,672. AUTOMATIC PISTOL. JOSEPH H. HINES, Auburn, Calif. Filed Jan. 11, 1922. Serial No. 528,474. 10 Claims. (Cl. 42—3.)

1. In a pistol of the character described a breech, a stationary barrel carried thereby, a chamber formed within the breech and in alignment with the barrel, a hollow breech block slidably mounted in said chamber, a

firing pin in said chamber guided and slidable independently of the breech block, separate springs arranged interiorly of the breech block and exteriorly of the firing pin for actuating the said parts, and a stationary guide common to both springs.

1,460,673. METHOD OF COLOR PHOTOGRAPHY AND PHOTOGRAPHIC ELEMENTS. MARCUS C. HOPKINS, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed May 6, 1916. Serial No. 95,967. 15 Claims. (Cl. 95—2.)

1. In a photographic element for use in color photography, the combination with a translucent support of filter elements thereon, there being windows separating said filter elements, and light sensitive emulsion opposite said windows to receive light therethrough, each separated filter element being of one color throughout its entire area.

1,460,674. SIGN BOX. GEORGE B. HUTCHINGS, Richmond, Va. Filed Mar. 20, 1920, Serial No. 367,516. Renewed Nov. 21, 1922. 6 Claims. (Cl. 40—65.)

1. A display device comprising a casing, provided with lighting means and power means, a reciprocating support moved by the power means and an interchangeable unit carrying a screen member and a picture member capable of being moved one in relation to the other to give an animated action, said unit being adapted to be inserted into the casing upon the reciprocating member, which gives effective action to the moving member within the unit.

1,460,675. ELECTRIC FUSE PLUG. WILLIAM ILE, Lynbrook, N. Y., assignor to Hemco Electric Manufacturing Company, Inc., New York, N. Y., a Corporation of New York. Filed May 21, 1919. Serial No. 298,820. 3 Claims. (Cl. 200—130.)

1. In a fuse plug, a threaded metallic shell contact, an end contact, an insulating closure for one end of the

shell molded in embedded relation to and insulating the shell and end contacts from each other and having a central perforation, a fuse wire within the shell in electrical connection with the shell and the end contact through the perforation in the insulating material, a transparent disk of insulating material to close the end of the shell opposite to the end contact, and an annular member having threaded connection with the end of the shell for clamping the transparent closure disk and arranged to serve as a fingerpiece to manipulate the plug.

1,460,676. MOLD FOR MAKING SHIP HULLS AND LIKE FLOATABLE STRUCTURES. EDWARD A. LARSEN, Larkspur, Calif. Filed June 30, 1921, Serial No. 481,563. Renewed May 14, 1923. 10 Claims. (Cl. 25—130.)

2. A mold adapted to be brought successively into positions for molding and also for releasing the product of the mold by lowering or raising the water in which the mold is inundated and means for operating the mold in such manner and means for enclosing and controlling the water for raising or lowering the level of same to accomplish this purpose.

9. In the combination with a floatable submersible dry dock, a mold adapted to be assembled and disassembled by varying the water level relative to the keel of the mold and means to cause the mold to operate as the water level varies.

1,460,677. AIR-REFRIGERATING MACHINE. IVAR LUNDGAARD, Hartford, Conn., assignor to The Automatic Refrigerating Company, Hartford, Conn., a Corporation of New Jersey. Filed May 22, 1922. Serial No. 562,907. 7 Claims. (Cl. 62—136.)

1. A closed cycle refrigerating system operating with gaseous mediating fluid, comprising in combination a plurality of heat absorbing and delivering units, arranged successively in the path of the mediating gas and in non-conductive relation to each other, means for insulating said units from the outside environment, and means for causing the mediating gas to move past said units in succession.

1,460,678. MACHINE FOR SAWING LASTS. THEODORE W. McNICHOL, Swampscott, Mass. Filed July 26, 1920. Serial No. 398,935. 12 Claims. (Cl. 143—59.)

1. The combination with a circular saw and rotating means therefor; a work support comprising a slidable frame movable in a path parallel with the sides of said saw and having an opening through which the upper part of the saw extends; a pivoted last-clamping member movable with said carriage and adjustable to present different parts of the last to said saw in different movements of the clamping means toward said saw; a means carried by said member adapted to bear against the bottom of the last whereby the last may be adjusted to various horizontal and vertical angles.

1,460,679. LAST AND METHOD OF MAKING SAME. THEODORE W. McNICHOL, Swampscott, Mass. Filed July 26, 1920. Serial No. 398,936. 6 Claims. (Cl. 12—133.)

1. A remodelled last having a transversely extending V-shaped notch in the toe end of the body thereof, the vertex of which is parallel to the sole face and perpendicular to the longitudinal axis of said last; and a toe piece secured therein and projecting beyond the walls of said notch.

1,460,680. REPLACEABLE LADDER RUNG. FRANCIS T. PETERS, Decatur, Ill. Filed Jan. 30, 1922. Serial No. 532,544. 1 Claim. (Cl. 228—58.)

A device of the character described comprising an angle iron having laterally bent portions of its two

respective sides at each end thereof, the laterally bent portions of the two respective ends being disposed in a single plane transverse to the body portion of the angle iron, the laterally bent portions at one side being bent away from said angle iron and the laterally bent portions of the other side being bent to provide a web between the sides of the angle iron, each of said bent portions being provided with an opening therethrough to receive a wood screw or the like.

1,460,681. PLANER-TOOL HOLDER. OSCAR J. SARLANDT, San Francisco, Calif. Filed Jan. 24, 1921. Serial No. 439,383. 5 Claims. (Cl. 90—53.)

1. A tool holder for planers and shapers comprising a shank, a pair of tool holders pivotally mounted thereon, oppositely projecting lugs for supporting said tool holders, tools carried by each tool holder between the pivots of the two tool holders, and means to prevent each tool holder from twisting laterally.

1,460,682. BUILDING SLAB. JOHN C. SCHLEICHER, Mount Vernon, N. Y. Filed Sept. 13, 1919. Serial No. 323,560. 3 Claims. (Cl. 72—40.)

1. A slab of the class described comprising an interior framework providing air spaces, an outer framework extending slightly beyond said interior framework, and a filling on each side of said framework and between the same forming cement faces.

1,460,683. PLASTIC OBTURATOR FOR GUN BREECHES. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint-Stock Company of France. Filed June 9, 1921. Serial No. 476,301. 8 Claims. (Cl. 89—26.)
7. An obturator comprising a plastic pad and diagonally split rings triangular in cross section the base

sides of which bear against opposed edge portions of said pad, the inner end of each ring terminating in a

straight edge contacting with the pad and disposed substantially at right angles to the edges of the hypotenuse side.

1,460,684. DISPLAY FIXTURE. DAVID J. SEAMAN, Saginaw, Mich. Filed Oct. 5, 1921. Serial No. 505,607. 31 Claims. (Cl. 211-16.)

2. A garment display fixture having a back, and a top, a transverse rod supported beneath the top in position to receive garment hangers at right angles to the back, and curtains to cover the open sides and front, said top comprising fixed and movable sections, the movable section being adapted to fold back on the fixed section or to extend forwardly therefrom at will, and lighting means carried by both sections.

1,460,685. GARMENT RACK. DAVID J. SEAMAN, Saginaw, Mich. Filed Oct. 5, 1921. Serial No. 505,608. 6 Claims. (Cl. 211-14.)

2. A garment-rack comprising supports, a hanger-bar journaled to rotate therein, and means for rapidly rotating the bar about its axis.

4. The method of spacing and shaping garments suspended by hangers from a common bar, which comprises rapidly rotating the bar about its axis.

1,460,686. RAIL CROSSING. MARTIN SVALLAND, New York, N. Y. Filed June 18, 1921. Serial No. 478,523. 9 Claims. (Cl. 246-273.)

1. A rail crossover, embodying two intersecting rails, each of which is provided with a gap to permit the passage of the flange of a wheel on the other, a wheel supporting member for bridging each gap, a rotary operating member adapted to move one supporting member into supporting position and to simultaneously permit the retraction of the other supporting member, and controlling means associated with each rail for rotating the operating member, said operating member being constituted to remain in the position it is placed by the controlling means of one rail until it is positively rotated to another position by the controlling means of the other rail.

1,460,687. DOOR. CHARLES C. TOMKINSON, Plainfield, N. J., assignor to J. Edward Ogden, Mountainville, N. Y. Filed Mar. 22, 1922. Serial No. 545,636. 10 Claims. (Cl. 20-19.)

1. In combination, a door casing, a door having horizontally opposite parts arranged to move vertically, means for swinging the door inwardly as the vertically movable parts are raised, sheaves mounted substantially vertically above the door, and counterbalancing means including cables extending over said sheaves and connected to said door in a plane offset from the plane of the door when the door is closed whereby the portions of the cables between the sheaves and door connection will be inclined to the vertical and said counterbalancing means will exert a horizontal force against the door to force the door against the door casing.

1,460,688. BELT BUCKLE. HARRY L. TOOKER, Taunton, Mass., assignor to Taunton Pearl Works, Incorporated, Taunton, Mass., a Corporation of Maine. Filed Feb. 1, 1922. Serial No. 533,294. 6 Claims. (Cl. 24-78.)

1. A belt buckle comprising a body member having spaced apart front and back plates, means for securing one end of the belt between said plates, said back plates being provided with a laterally-extending lock stud receiving opening enlarged at its outer end, and extending longitudinally of the buckle at its inner end, a detachable member to which the opposite end of the belt is adapted to be secured, said member having a locking stud adapted to engage the opening in said back plate and be moved both laterally and longitudinally to locked position therein.

1,460,689. SHEET-FEEDING MECHANISM. CHARLES W. TREMPER, New Haven, Conn., assignor to The Fuller Mfg. Co., New Haven, Conn., a Corporation. Filed Aug. 17, 1922. Serial No. 582,373. 8 Claims. (Cl. 271-46.)

1. In a sheet-feeding mechanism, the combination with sheet-checking mechanism, including a slotted driving arm, of means traveling in said slot, and links connected with said traveling means, the opposite end of one of the said links being relatively fixed and the other link connected with a sheet-checking mechanism.

1,460,690. CELLULOSE-ETHER COMPOSITION. WILLIAM R. WEBB, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 30, 1921. Serial No. 465,931. 14 Claims. (Cl. 106-40.)

1. A composition of matter comprising cellulose ether and an aromatic side chain alcohol.

1,460,691. ARTIFICIAL TOOTH. JAMES LEON WILLIAMS, New York, N. Y., assignor to The Dentists' Supply Company, a Corporation of New York. Filed Jan. 29, 1920. Serial No. 354,978. 9 Claims. (Cl. 32-9.)

1. An artificial tooth and an anchor therefor adapted for use in dentures wherein the tooth has its upper part provided with a deep hole of greater width transversely than in a lingual-buccal direction, and said hole at the

lingual side terminating in a rearwardly directed deep notch extending to the rear wall of the tooth, and in which the anchor has a vertical part of greater width than thickness extending down into the hole of the tooth and cemented therein and also provided with a rearward-

ly and upwardly projecting shank extending through and cemented in the deep notch of the tooth, and wherein further the side walls of the notch of the tooth are undercut for firmly holding the cement in which the rearwardly extending part of the anchor shank is embedded.

1,460,692. ADJUSTABLE CRANK PIN. ROBERT E. WINTERS, Coraopolis, Pa., assignor of one-half to Anthony C. Dean, Pittsburgh, Pa. Filed Apr. 22, 1921, Serial No. 463,547. Renewed Nov. 21, 1922. 9 Claims. (Cl. 74-38.)

1. An adjustable crank pin comprising a driving shaft, a driven wheel, a reciprocable member, a pin adjustably mounted in said wheel and extending into a slot in said reciprocable member, a vane mounted on said driven shaft and arranged to creep outwardly thereon, means arranged to be operated by said vane to move the pin away from the center of said wheel, and resilient means exerting a force tending to move said pin toward the center of said wheel.

1,460,693. BOX-MAKING MACHINE. JOHN ALBRECHT, Kewaunee, Wis. Filed Feb. 20, 1922. Serial No. 538,075. 21 Claims. (Cl. 144-2.)

1. In a device of the class described the combination of means for holding a piece of box forming material; means for cutting a substantially circular box end from said material; means for positioning another piece of material in co-operative relation with said first piece while so held to form the side walls of a box; means for securing said pieces of material together; and means for moving said pieces of material to present successive portions thereof to said securing means.

1,460,694. LUMINOUS PENDANT. WILLIAM F. ARZINGER, Jersey City, N. J. Filed Aug. 5, 1921. Serial No. 489,996. 4 Claims. (Cl. 240—1.)

1. A pendant adapted for connection with a pull chain comprising a tubular member adapted to receive the pull chain, a tubular shell surrounding said tubular member, a carrying sheet having luminous material thereon, the carrying sheet being interposed between said tubular member and shell, and yieldable means for engaging one end of the pull chain for securing the pendant to the same.

1,460,695. LUBRICATING, CLEANING, AND PAINTING APPARATUS. FRANK A. BANNON, Dallas, Tex., assignor, by direct and mesne assignments, of two-thirds to Ridgell Keller and one-third to W. A. Thornton, both of Dallas, Tex. Filed Dec. 2, 1921. Serial No. 519,567. 2 Claims. (Cl. 299—84.)

1. In a device of the type set forth, a fluid receptacle, a water service pipe, means to connect the bottom of the receptacle to the pipe so as to force fluid in the receptacle out of the top of the latter, a valved pipe connected to the top of the receptacle and to the water pipe to conduct the fluid into the water pipe, heating means connected to the water pipe, means to conduct fluid from the heating means, a valve in the water pipe to enable the supply of water to the heating means to be cut-off and to allow fluid from the receptacle to enter the heating means to be vaporized to the exclusion of the water, a second fluid receptacle connected at its bottom to the water service pipe, and a valved pipe connected to the top of the second receptacle and to the valved pipe of the first receptacle whereby upon closing of the valve of the valved pipe of the first receptacle and closing of the water pipe valve and opening of the valve of the valved pipe of the second receptacle fluid from the latter may enter the heating element to be vaporized to the exclusion of the water and of the fluid from the first receptacle.

1,460,696. MINE CAR. FRANK S. BARKS, St. Louis, Mo., assignor to Lincoln Steel and Forge Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 17, 1922. Serial No. 553,950. 4 Claims. (Cl. 295—42.)

4. In a mine car, spaced axles, journal boxes on said axles, flat bars extending lengthwise of the car at the

sides of the latter and bent semi-cylindrically about each of said journal boxes, channel irons extending longitudi-

nally of said axles with their flanges turned downwardly and secured to the bent portions of said bars.

1,460,697. ADJUSTABLE BRACKET. ALFRED W. BENDLIN, Milwaukee, Wis. Filed Mar. 28, 1922. Serial No. 547,377. 1 Claim. (Cl. 45—82.)

An adjustable bracket comprising a base, a plurality of hollow arms arranged in series and connected to each other and to the base by universal joints, a quadrant and lever secured to one of the arms and flexible elements extending thru said arms and joints and connecting the lever to the respective ends of the bracket, said lever being adjustable on the quadrant to tension the flexible elements, whereby the joints are caused to bind and lock the bracket in any desired position.

1,460,698. DISTRIBUTING-BOX CONNECTION FOR ELECTRICAL CONDUCTORS. HERBERT H. BERRY, Springfield, Mass. Filed Sept. 23, 1922. Serial No. 590,183. 5 Claims. (Cl. 247—18.)

1. A device for connecting an electrical conductor with a distributing box or the like, comprising a bushing

adapted to loosely surround the conductor and to be removably secured at one end to the box, closures for the opposite ends of the bushing having apertures for the passage of the conductor therethrough, one of said closures comprising a cap secured to the bushing with its end wall spaced from the end face of the bushing, a washer within said cap adapted to encircle the conductor and overlap the adjacent end face of the bushing, packing material surrounding the conductor within the bushing and packing material within said cap between its end wall and the washer adapted to be compressed to grip the conductor by the turning of the cap.

1,460,699. PIGMENT AND PAINT. HENRY SPENCER BLACKMORE, Mount Vernon, N. Y.; ISABELLE BLACKMORE and STEPHEN L. TINGLEY administrators of said Henry Spencer Blackmore, deceased. Filed May 20, 1918. Serial No. 235,459. 11 Claims. (Cl. 134—58.)

8. The process of making a paint pigment, which comprises performing a reaction between a water soluble metal aluminate and a water soluble metal sulphate, the product of which will comprise a water-insoluble aluminate mixed with a water-insoluble sulphate.

1,460,700. COMBINED PICTURE BOOK AND PUZZLE. ELIZA BUFFINGTON, Madison, N. J. Filed Apr. 15, 1922. Serial No. 552,837. 5 Claims. (Cl. 40—41.)

1. A puzzle device comprising a figurine or figurines in the round in statuette form and consisting in separable sections, said sections having contacting faces fitting together, said sections further having their outer surfaces merging inconspicuously into each other when assembled, thereby forming the complete statuette.

1,460,701. DIRECTION INDICATOR. ADOLF BUTTER, Clifton, N. Y. Filed July 20, 1922. Serial No. 576,353. 2 Claims. (Cl. 177—329.)

1. An automobile signal of the class described comprising a plurality of shell members having external and internal flanges formed at their ends and adapted to telescope one within the other, the largest shell being adapted to be anchored to the automobile-body, the smallest shell having a casing and a pair of convex lenses and a filament lamp secured thereto, a plurality of telescoping tube

members secured to the largest and smallest shell member and adapted to telescope in unison with the shell members, an expansion coil spring retained in the chamber formed by the shell and tube members and adapted to yieldably keep the shells in extended position, means for releasably telescoping the shells one within the other, and means for energizing the filament lamp.

1,460,702. POULTRY FOUNTAIN. SAMUEL P. CALTRIDER and PETER P. SAUBLE, Westminster, Md. Filed Feb. 28, 1922. Serial No. 540,001. 2 Claims. (Cl. 119—77.)

1. A poultry fountain comprising an outer receptacle having a number of openings in its side wall, a removable fountain within said outer receptacle and having an intake opening in its upper end and a discharge opening in its lower end, a cap to close the intake opening, means connected with said cap to close the discharge opening of said fountain, arms projecting from the upper edge of the outer receptacle, and a hood resting upon said arms and above the inner and outer receptacles.

1,460,703. PHOTOGRAPHIC REVERSAL PROCESS. JOHN G. CAPSTAFF, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 2, 1921. Serial No. 449,249. 27 Claims. (Cl. 95—5.)

1. In a process of making photographic images by reversal from a photographic light sensitive element, containing an image, the steps of submitting the element to a printing light controlled in accordance with the printing value of the element, and then developing an image in said element.

1,460,704. SOAP DISSOLVER AND AGITATOR. ARTHUR CELLER, Brooklyn, N. Y. Filed June 17, 1922. Serial No. 568,987. 7 Claims. (Cl. 259—50.)

1. In a soap dissolver and agitator, a liquid receptacle, an anchor device on the bottom thereof, a hood extend-

ing partly over the top thereof, said anchor device and hood being placed off center, and a soap container held in

said anchor device and said hood and means to rotate said soap container to charge the liquid in said receptacle with dissolved soap to any desired degree.

1,460,705. SPEED GOVERNOR FOR PNEUMATIC MOTORS. WILLIAM C. COLLIGNON, Chicago, Ill. Filed Feb. 14, 1921. Serial No. 444,686. 1 Claim. (Cl. 230—36.)

A device of the character described comprising a casing providing an elongated, horizontal air chamber of which a bellows chamber forms an aligning part, and two parallel vertical air passageways normally connecting said elongated horizontal air chambers; manual valves controlling said vertical passageways; in combination with a bellows enclosing a chamber constituting one part of one of said horizontal air chambers; a lever extending into the other aligning part of said air chamber and secured to the motive part of said bellows; a poppet valve operable thereby for controlling one of said vertical air passageways whereby said lever lifts said valve when the bellows is extended and closes the valve when it is collapsed and a weight adjustable longitudinally of the movable part of the bellows structure.

1,460,706. PRODUCTION OF COMPLEMENTAL IMAGES. DANIEL F. COMSTOCK, Cambridge, Mass., assignor to Kalmus, Comstock & Wescott, Inc., Boston, Mass., a Corporation of Massachusetts. Filed Oct. 6, 1920. Serial No. 415,073. 26 Claims. (Cl. 88—1.)

1. In a photographic apparatus, a plural image forming optical train, embodying a single objective for the incident rays, and a reflecting prism unit having a single plane incident ray receiving face and proximate emergent ray faces in a single plane at an angle to the plane of the incident ray receiving face, other faces of the prisms forming a light dividing reflector in the path of the in-

cident rays, a single total reflector in the path of the rays of one division and two reflectors in the path of the rays of another division, said reflectors being ar-

ranged at angles to bring the emergent rays of both divisions into parallelism to form two images in the same plane and in proximity to each other.

1,460,707. TIMING APPARATUS. CHARLES M. CROOK, Chicago, Ill. Filed Oct. 2, 1919. Serial No. 327,980. 17 Claims. (Cl. 200—39.)

5. In a device of the character described, the combination with a rotatable shaft, of a tripping means operated when said shaft has made a predetermined movement of rotation, a motor having a rotating armature, a movable member having a driving gear for said shaft connected with said armature, and means for moving said member to disconnect said driving gear from the shaft.

1,460,708. PROCESS OF MANUFACTURING DIAZODINITROPHENOL. WILLIAM M. DEHN, Seattle, Wash. Filed Dec. 9, 1919. Serial No. 343,592. 15 Claims. (Cl. 260—69.)

4. The process of making diazodinitrophenol, which comprises reacting on ammonium picramate with nitric acid of substantially the highest concentration in the presence of alcohol as a reducing agent for nitric acid, and covering the reacting materials with a layer of neutral oil to prevent combustion and explosion.

1,460,709. AUTOMOBILE SIGNAL. JOHN F. WILLIAM DIEGEL, Manitowoc, Wis. Filed Aug. 7, 1922. Serial No. 580,251. 1 Claim. (Cl. 116—45.)

The combination of a reflector, a lamp therein, a glass plate carried by said reflector, a cover normally overlying said glass plate and pivoted to the lower end of said re-

flector, said plate having a visible symbol exhibited on its upper portion, and words of warning below said symbol, and an arm rigid with said cover actuable to rotate said cover, whereby said cover may be moved outwardly slightly to permit the upward emission of light, and further outward to exhibit said visible symbol and still further to reveal said words of warning.

1,460,710. TENDER TANK. CHARLES DUCAS, New York, N. Y., assignor to Charles Ducas, Alexander W. Whiteford, and David Walter Pye, trustees, all of New York, N. Y. Filed Jan. 6, 1922. Serial No. 527,377. 8 Claims. (Cl. 105—236.)

1. A locomotive tender tank construction comprising a tank having top and sides, and also a bottom plate with an upstanding flange in combination with a gusset plate secured to said flange, and a dash plate secured to said gusset plate and to the top of the tank.

1,460,711. PRINTING AND ADDRESSING MACHINE. JOSEPH S. DUNCAN, Chicago, Ill. Filed Oct. 2, 1916. Serial No. 123,233. 76 Claims. (Cl. 101—56.)

28. In a printing machine, the combination of a frame, a platen carriage movable across said frame, a feed table and means on said carriage to pick up a sheet of paper from said table including a ledge fixedly connected and held from movement relative to said carriage and fingers cooperating with said ledge, and means for lifting said fingers as said carriage approaches said table.

73. In a printing machine, the combination of a frame, a printing form, an inking ribbon, and means whereby said ribbon may be slidably moved to one side of the printing form to uncover and expose the latter.

75. In a printing machine of the class described, the combination of a form of type and a roller platen mounted to reciprocate transversely across the form of type in the general direction of the lines of type with the axis of the platen at slightly less than a right angle to the lines of type.

1,460,712. LOOSE-LEAF BINDER. HOWARD A. DUDLEY, Hagerstown, Md. Filed Nov. 30, 1921. Serial No. 518,954. 8 Claims. (Cl. 129—8.)

1. A loose-leaf binder comprising front and rear cover portions provided with spaced hinged flaps, each flap being

apertured, a core of leaves inserted between said flaps and provided with cylindrical apertures in alignment with

the apertures in said flaps, and pins inserted through opposite sides, one through each of said flap apertures and its aligned core aperture.

1,460,713. FUEL CHUTE. JOHN L. FALK, Spokane, Wash. Filed Mar. 19, 1921. Serial No. 453,626. 3 Claims. (Cl. 193—34.)

1. The combination with a chute, hinge straps co-acting therewith to form upper recesses and lower sockets, and a hopper, of a hinge bar on the lower edge of said hopper, said bar having angular ends adapted to swing in said recesses but adapted to be fixed in said sockets, whereby the hopper may be lifted from locked engagement of the hinge bar in said sockets, and said hopper tilted outwardly and downwardly with said ends in said recesses.

1,460,714. ENLARGING CAMERA. EDWIN C. FRITTS, Urbana, Ill., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed May 12, 1921. Serial No. 469,077. 23 Claims. (Cl. 88—24.)

1. Photographic apparatus comprising a rigid support having a fixed cam surface, two camera parts slidable on said support, and a member pivotally connected to one holder and having a slidable relation with the cam and an operative relation with the other holder.

- 1,460,715. LIQUID METER. ALBERT J. GRANBERG, San Francisco, Calif., assignor to The Granberg Meter Company, San Francisco, Calif., a Corporation of California. Filed Apr. 14, 1919. Serial No. 289,962. 20 Claims. (Cl. 73—37.)

1. A liquid meter comprising a casing having inlet and outlet ports, a reciprocating frame in the casing adapted to be reciprocated by the passage of liquid, a meter head adapted to be rotated about an axis eccentric to its axis of figure, operatively connected with said frame so that reciprocation of said frame causes rotation of said head about said eccentric axis and means for varying the distance between the axis of rotation and the axis of figure.

- 1,460,716. BOOK-FORM SAVINGS BANK. BUTLER F. GREER, San Francisco, Calif. Filed Apr. 13, 1921. Serial No. 461,154. 7 Claims. (Cl. 232—4.)

1. A book form savings bank comprising a case simulating the proportions of a book, and an envelope covering simulating the binding of the book detachably interlocked with said case.

- 1,460,717. COOPER'S SUN PLANE. CHARLES H. GROTH, Rochester, Pa. Filed Jan. 14, 1922. Serial No. 529,182. 1 Claim. (Cl. 147—24.)

A cooper's sun plane including a plate-like body, a bit, an orifice for the bit, a bridge arranged rearward of the orifice, a block arranged rearward of the bridge, a shouldered pressure plate adapted to extend beneath the bridge and by its shoulder to engage the forward edge of the bridge, and a screw extensible from said pressure plate, said pressure plate and screw adapted to engage at intermediate points and from above the bit introduced and resting terminally upon the rim of the orifice and the block, substantially as described.

- 1,460,718. PROCESS OF PURIFYING AND DEHYDRATING SWITCH OIL. CYRUS HOWARD HAPGOOD, Nutley, N. J., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed May 3, 1921. Serial No. 466,496. 4 Claims. (Cl. 196—26.)

1. The process of purifying and dehydrating oil containing carbon and water, such as switch oil, which

comprises forming a mixture of the oil with soap, subjecting the mixture to centrifugal force to eliminate the

carbon, dirt, soap and a large part of the water and subjecting the thus partially purified but imperfectly dehydrated oil to centrifugal dehydration.

- 1,460,719. FUEL-OIL BURNER. WILLIAM M. HOFFMAN, Buffalo, N. Y., assignor, by mesne assignments, to Oil Fuel Engineering Corporation, a Corporation of New York. Filed Mar. 13, 1922. Serial No. 543,182. 7 Claims. (Cl. 158—92.)

6. In a fuel oil burner, a combustion chamber consisting of a hollow metal casing, the interior of which is lined with a porous refractory material and the bottom of which is covered with loosely associated porous refractory balls in communicating contact with the porous refractory lining of the casing, said casing provided with an outlet for the discharge of products of combustion, and a jacketed discharge mouth extending outwardly from such outlet, a nozzle so disposed as to project a jet into and through said combustion chamber toward the outlet therefrom, vapor communicating means leading from said jacketed discharge mouth to said nozzle, and fuel communicating means leading to the lower portion of said casing.

- 1,460,720. MEANS AND DIES FOR DROP-FORGING CRANK SHAFTS AND PROCESS OF FORMING CRANK SHAFTS. HARRY H. KEEPORTS, Detroit, Mich. Filed Sept. 5, 1919. Serial No. 321,933. 11 Claims. (Cl. 29—6.)

1. The process of forming and drop forging a six-throw crank shaft with end and central bearing parts consisting in first deflecting in vertical planes and forming the first and sixth crank throws by upward deflection, and simultaneously the third and fourth crank throws by downward deflection of the metal and rough forming the bearing pins and arms of second and fifth crank throws, then turning the partially formed bar so that the first and sixth, and third and fourth crank throws are in a horizontal plane, and thereafter simultaneously deflecting the shaft to form the second and fifth crank pins and arms to their proper position and simultaneously bending the first and sixth crank throws to deflect them relatively upward thirty degrees to a point sixty degrees to one side of the vertical and the

third and fourth crank throws relatively upward thirty degrees to a point sixty degrees to the opposite side of the vertical, as specified.

6. Dies for the forming of a crank shaft comprising depressions and projections with obliquely arranged surfaces for deflecting the first and sixth crank throws in one direction and the third and fourth crank throws in an opposite direction in the same plane, and a finishing die conformed to the form of the shaft and arranged to deflect the second and fifth crank pins, throws and arms to their proper position and force all crank arms and pins, as specified.

1,460,721. ADJUSTABLE SEAT. WILLIAM COATES LISTER, Toronto, Ontario, Canada. Filed Apr. 7, 1922, Serial No. 550,479. Renewed May 11, 1923. 1 Claim. (Cl. 155—81.)

An adjustable seat comprising a seat element, a forked supporting arm therefor projecting beyond the seat element formed with a through-aperture at approximately right angles to its plane and a supporting bracket consisting of a stanchion loosely inserted through said aperture and binding against its diagonally opposite edges for supporting the seat element when extended at an angle to the stanchion, and a curved base member for holding the seat element suspended when moved out of engagement with the stanchion.

1,460,722. INTERNAL-COMBUSTION ENGINE. RALPH M. LOVEJOY, Meredith, N. H. Filed Nov. 14, 1916. Serial No. 131,335. 15 Claims. (Cl. 123—75.)

1. In combination with an internal combustion engine having a combustion chamber, an intake conduit

leading to said combustion chamber and having an air intake port; means for supplying liquid fuel to said

conduit and means for vaporizing said liquid fuel by air taken from said conduit and caused to impinge at high velocity upon the liquid fuel within said conduit.

1,460,723. SHOCK ABSORBER. RALPH M. LOVEJOY, Meredith, N. H. Filed Nov. 17, 1921. Serial No. 515,801. 10 Claims. (Cl. 188—100.)

1. A shock absorber for cushioning the movement of two relatively movable members comprising a casing adapted to be secured to one of said members presenting a reservoir, a cylinder, a piston reciprocable in the cylinder and means for causing said piston to act upon the other relatively movable member, a tubular conduit communicating with said cylinder and reservoir having a port, valve mechanism mounted in said tubular member in co-operative relation to said port, oppositely disposed light and heavy springs controlling the movement of said valve mechanism acting normally to provide a small opening of said port when controlled by the light spring to cushion slight movements of the piston produced by slight shocks and acting to produce a greater opening of said port when controlled by said heavy spring to cushion the more extended movements of said piston caused by heavier shocks.

1,460,724. GRINDING MACHINE. JOHN THOS. McGRATH, Bloomington, Ill. Filed Jan. 15, 1921. Serial No. 437,541. 22 Claims. (Cl. 51—55.)

1. A grinding machine for the purpose set forth comprising a table capable of horizontal rotative oscillation and adapted to support a grinding element, means to support the work in line with the grinding element,

freely tiltable supporting means for said table at the axis of oscillation thereof, means to lift the table to

bring the grinding element into operative relation to the work, and means for imparting to and fro oscillatory grinding movement to said table in a horizontal plane.

1,460,725. NECKTIE HOLDER. PETER L. MARKEY, Chicago, Ill. Filed Apr. 17, 1922. Serial No. 554,212. 6 Claims. (Cl. 24—59.)

1. In a necktie holder, a base, curved arms extending laterally from said base, oppositely disposed prongs connected to said arms, means for detachably securing a tie to said prongs and means for adjustably securing said necktie holder on a collar.

1,460,726. MEASURED-SERVICE TELEPHONE SYSTEM. TALBOT G. MARTIN, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed June 14, 1919. Serial No. 304,184. 32 Claims. (Cl. 179—6.3.)

1. In a telephone system, a line, a calling device for said line, an impulse repeating device for said line responsive to impulses from said calling device, an automatic switch controlled by said repeating device to extend a connection to a called subscriber, a coin collector on said line, a relay in said repeating device controlled by the completion or noncompletion of the said connec-

tion for determining whether the coin is to be collected or refunded, and another relay in said repeating device for operating the coin collector in the manner determined when the release of the connection is initiated.

1,460,727. FAUCET. HUGO MOCK, New York, N. Y. Filed Apr. 20, 1922. Serial No. 555,741. 4 Claims. (Cl. 277—57.)

1. The combination of a basin, independent hot and cold water faucets placed at the upper rim of the basin adjacent each other, the outlets of said faucets being on different horizontal planes, and shaped and positioned relative to each other so as to deliver a single stream of water into the bottom of said basin when both faucets are open.

1,460,728. INTERNAL-COMBUSTION ENGINE. EDWARD E. NELDER, Milwaukee, Wis. Filed July 15, 1922. Serial No. 575,360. 4 Claims. (Cl. 74—14.)

1. In a device of the character described, a rotatable shaft having a drive member secured thereto, a wrist pin carried by the drive member, a walking beam mounted on an axis parallel to said shaft and having a yoke provided with an arcuate slot in which said shaft rides when the walking beam is oscillated, and a radial slot in which said wrist pin is guided about the shaft, and a pair of pistons operable to oscillate said beam.

1,460,729. CHECK WRITER. WALTER B. PAYNE, Rochester, N. Y., assignor to Todd Protectograph Company, Inc., Rochester, N. Y. Filed Sept. 22, 1920. Serial No. 411,911. 14 Claims. (Cl. 197—6.2.)

1. In a machine of the class described, the combination with a printing couple, of mechanism comprising a

prime mover for actuating the printing couple, devices comprising a pair of rotary elements, one above and one below the work, for breaking the work and feeding it to

the printing couple, differential mechanism driven by the prime mover for differentially rotating one of said elements, and manipulative devices controlling the differential mechanism.

1,460,730. BOX TONGS. BYRON PHELPS, Seattle, Wash., assignor of one-half to Adolph L. Brand, Seattle, Wash. Filed Jan. 5, 1922. Serial No. 527,101. 1 Claim. (Cl. 294—62.)

Box tongs comprising a relatively rigid gripping member, a downwardly extending claw portion formed upon the outer end of said member, a hand hold formed upon said member adjacent the inner end thereof, a movable gripping member hingedly mounted at the inner end thereof, a downwardly extending claw portion formed upon the outer end of said last named member, means to retain said last named member upon said first named member, and means to limit the closing movement of said movable gripping member upon said rigid gripping member.

1,460,731. TUMBLING BARREL. GEORGE B. PICKOP, New Haven, Conn., assignor to The Malleable Iron Fittings Company, Branford, Conn., a Corporation of Connecticut. Filed Apr. 26, 1920. Serial No. 376,595. 12 Claims. (Cl. 51—164.)

1. In a tumbling barrel, a frame, a rotatably mounted drum supported thereon to tilt through a large angle, a source of exhaust, means affording communication between said drum and source of exhaust, and means for rotating said drum in various tilted positions.

1,460,732. PHOTOMETRIC DEVICE. CARL PULFRICH, Jena, Germany, assignor to the Firm Carl Zeiss, Jena, Germany. Filed Mar. 1, 1922. Serial No. 540,300. 5 Claims. (Cl. 88—23.)

1. In a device for comparing the luminosities presented to both eyes of an observer two mark-systems, admitting

of binocular observation and being movable relatively to each other in parallel planes, and a darkening device, ad-

mitting of changing the luminosity presented at least to the one eye of the observer.

1,460,733. GUTTER END PIECE. THOMAS RIGBY, Philadelphia, Pa., assignor to Berger Bros. Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 25, 1922. Serial No. 563,626. 4 Claims. (Cl. 108—28.)

3. A gutter having an end member, a flared flange extending therefrom, and a second flange extending from the end member within the first flange and substantially normal to the end member, said second flange being of greater depth than the first flange.

1,460,734. WIRELESS DETECTOR. WILLIAM HARRY RUF, Roselle Park, N. J. Filed Apr. 27, 1922. Serial No. 556,916. 12 Claims. (Cl. 250—31.)

1. A wireless detector comprising a frame provided with means for fitting it upon the human finger after the manner of a finger ring, and detector mechanism carried by said frame for the reception of wireless signals.

1,460,735. WELL-PIPE SCREEN. SPENCER H. ST. JOHN, Long Beach, Calif. Filed Dec. 21, 1921. Serial No. 524,004. 3 Claims. (Cl. 166—6.)

1. A screen for well-tubing provided with narrow slots, and bent transversely of the slots for seating in the tubing, the screen being flattened as inserted whereby the slots are spread on the inner side.

1,460,736. ENZYMIC SUBSTANCE AND PROCESS OF MAKING THE SAME. JOKICHI TAKAMINE, New York, N. Y., and JOKICHI TAKAMINE, Jr., Clifton, N. J. Filed July 30, 1921. Serial No. 488,692. 21 Claims. (Cl. 99—11.)

1. The process which consists in propagating a fungus upon a suitable culture medium, then extracting the soluble content of the culture medium having the fungus growth thereon, then adding a phenol to the extract.

16. As a new article of manufacture, a stable enzymic solution, which is clear and transparent, and free from decomposing or fermenting bacteria, of slightly nutty taste and musty odor, possessing strongly diastatic and other enzymic properties, gives no coloration when an alcoholic solution of gum guaiacol and hydrogen peroxide is added thereto, and contains a large amount of phosphate as a mineral constituent, a comparatively small amount of sugar and a fairly large amount of proteid organic matter, and a phenol.

1,460,737. DEVICE FOR MAKING ARMATURE COILS. GEORGE W. TOWNSEND, St. Albans, N. Y. Filed July 12, 1921. Serial No. 484,067. 10 Claims. (Cl. 140—92.2.)

1. In an armature coil winding device, a rotatable member for winding a plane coil, and individual means for clamping and holding the ends of the plane coil after removing it from said rotatable member and preparatory to opening the coil.

1,460,738. CORRUGATED-METAL CAR END. WILLIAM E. VAN DORN, Chicago, Ill. Filed Nov. 19, 1920. Serial No. 425,040. 19 Claims. (Cl. 105—410.)

1. A flat metal sheet having therein elongated stiffening corrugations so shaped that the tops of the ridges and the bottoms of the valleys are bent lengthwise in a plane at right angles to the plane of the sheet.

1,460,739. VISOR FRAME FOR AUTOMOBILE WIND SHIELDS. WILLIAM C. WEISKE and HARLEY A. DORMAN, Detroit, Mich. Filed July 26, 1920. Serial No. 399,141. 3 Claims. (Cl. 296—95.)

1. In a visor frame for windshields, in combination with the windshield frame, a pair of side members in parallel relation, said members being formed of a sheet of metal folded upon itself to form a longitudinal tubular portion with the edges of the blank extending laterally therefrom in parallel spaced relation, the opening of one member facing that of the other, cross members extending from between the parallel portions of one side member into and between that of the other side member, an opaque covering for the frame, and a bracket fixedly attached to the covered frame concealing the cover ends, and means pivotally connecting the brackets to the windshield frame.

1,460,740. THREADING TOOL FOR AUTOMATIC MACHINES. HARRY T. WHITE, Highland Park, Mich. Filed Dec. 11, 1920. Serial No. 429,865. 16 Claims. (Cl. 10—96.)

3. In a thread-cutting tool, the combination with a head and chasers radially adjustable in relation thereto, of a member rotatable upon said head for actuating said chasers radially, said head and rotatable member being constructed to form an annular recess therebetween with a tangential entrance port to said recess, a spring insertable into said recess through said tangential port, and a plug for closing said port and forming an abutment for said spring.

11. A thread-cutting tool comprising a shank, a head sleeved upon said shank and provided with radially extending guideways, chasers slidably secured in said guide-

ways, a rotatable member surrounding said head and provided with cams for actuating said chasers in said guideways, a non-rotatable head sleeved on said shank adjacent to said first-mentioned head, a latch for locking said rotatable head in fixed relation to said non-rotatable head, resilient means for holding said heads in contact with each other, permitting the longitudinal adjustment of said rotatable head to disengage the latch therefrom, and means for cushioning the non-rotatable head upon said shank permitting a limited longitudinal movement thereof.

1,460,741. PLUMB AND LEVEL. HARRY W. YOUNG, Milwaukee, Wis., assignor of one-half to Walter Fischer, Milwaukee, Wis. Filed Dec. 21, 1920. Serial No. 432,209. 1 Claim. (Cl. 33—215.)

The combination of a base member having a closed wall and an open front, a plate closing said open front, an arbor journaled in said rear wall and said plate, a gear wheel rigid with said arbor, a pointer carried by said arbor exterior to said plate, a weight on said arbor for holding the pointer in a plumb line, a second arbor journaled in said rear wall and said plate, a pinion on said second arbor, and meshing with said gear wheel, a second gear wheel on said second arbor, a third arbor journaled in said rear wall and said plate, a third gear on said third arbor, meshing with said second gear wheel, a pointer on said third arbor exterior of said plate, said plate being marked circularly with gradations about said first mentioned arbor to give readings in degrees, and being marked with gradations about said third arbor to give readings in minutes.

1,460,742. SPLICE BAR FOR RAIL JOINTS. FRANKLIN E. ABBOTT, Buffalo, N. Y., assignor, by mesne assignments, to Bethlehem Steel Company, New York, Inc., a Corporation of New York. Filed Nov. 26, 1920. Serial No. 426,426. 5 Claims. (Cl. 238—164.)

1. A splice-bar for rail joints of standard section formed with a shoulder extension projecting slightly beyond the lower edge of the rail head to provide support for a welding rod, said shoulder being of a size to provide normal clearance for the wheel flange.

1,460,743. HOLDER. EDWARD H. BINNS and RALPH H. BINNS, Pittsburgh, Pa. Filed Apr. 29, 1922, Serial No. 557,332. Renewed Mar. 15, 1923. 6 Claims. (Cl. 24—119.)

1. As an article of manufacture, a holder including a chambered receptacle, a flexible member attached to said

receptacle, and means at the ends of said flexible member whereby the same may be detachably connected with a support affixed to the member with which the holder is to be associated.

1,460,744. METHOD OF TAKING PICTURES. IWER BOYSEN, New York, N. Y. Filed Mar. 15, 1921. Serial No. 452,519. 2 Claims. (Cl. 95—81.)

1. The herein described method of taking photographs which consists in interposing between the object and the lens, a transparent screen having upon its surface a field of very small semi-opaque dots.

1,460,745. SPARK PLUG. JAMES L. BROCKNEY and CHARLES E. GEORGE, Detroit, Mich. Filed Apr. 6, 1922. Serial No. 550,057. 2 Claims. (Cl. 123—169.)

1. In a spark plug, a shell forming the outer electrode, a central electrode within the shell and insulated therefrom, a sleeve revolvably mounted on the lower end of the central electrode, and a propeller mounted on said sleeve, said propeller being freely revolvable with respect to the sleeve and having its blade ends spaced from the shell to form spark gaps.

1,460,746. STEAM TRAP. RAGNAR CARLSTEDT, Stockholm, Sweden, assignor to Aktiebolaget Arca Regulator, Stockholm, Sweden, a Company of Sweden. Filed Jan. 2, 1920. Serial No. 349,025. 3 Claims. (Cl. 137—103.)

1. In a steam trap, the combination of a vessel, a drain-valve from said vessel, a conduit for a flowing liquid under pressure, a member connected with said valve and inserted in said conduit so as to be actuated in one direction by the liquid in the same, an outflow opening on said conduit, a plate located in front of said outflow opening and movable towards and away from the same, and a float in said vessel connected with said plate in such manner as to impart motion to the same.

1,460,747. MACHINE FOR SHUCKING VEGETABLE IVORY NUTS. HENRY W. CROWELL, Glen Ridge, N. J. Filed Oct. 28, 1921. Serial No. 511,124. 15 Claims. (Cl. 146—14.)

7. A rotary cutter including a revoluble body portion, a plurality of eyes secured in the periphery of said body portion, and washer-like cutting elements loosely mounted in said eyes.

1,460,748. MEANS FOR PREVENTING FOWL FROM ESCAPING. HUGO DORNSEIF, Bergerhof, Germany. Filed June 9, 1922. Serial No. 567,215. 5 Claims. (Cl. 119—97.)

1. A fowl fether comprising in combination, a two-legged sheet metal clamp, the legs being connected at one end, means for connecting and fixing the free ends of said legs and a row of serrations on the inner side of a leg, each adapted to hold a single quill.

1,460,749. PROCESS FOR SECURING WRIST PINS FOR CHAIN LINKS. RAYMOND W. DULL, Chicago, Ill., assignor to Link Belt Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 23, 1921. Serial No. 454,974. 2 Claims. (Cl. 59—8.)

1. The process of securing chain links together, which consists in threading through such links a circumferentially channeled pin and placing a cupped washer thereabout with the central aperture of said washer in line with the channel, and in exerting force against the periphery of such washer to align it in the plane of such channel.

1,460,750. MACHINE FOR MAKING PAPER CONES. JOHN EPPLER, Philadelphia, Pa. Filed Aug. 4, 1921. Serial No. 489,669. 17 Claims. (Cl. 93—79.)

1. In a machine for making paper cones, a conically-shaped mandrel provided with a longitudinal slot relatively narrow toward the wide end of the mandrel and substantially wider toward its narrow end, the wider portion affording a ready means of entering the blank and the narrow portion enabling the mandrel to grip a narrow inserted edge of the blank preparatory to wrapping.

1,460,751. SPINNING RING. SUMNER FORBES, Brookline, Mass., assignor to Union Industrial Company, Boston, Mass., a Corporation of Maine. Filed June 8, 1921. Serial No. 476,071. 3 Claims. (Cl. 118—56.)

1. In a spinning ring, the combination with a shell, of a lining of self-lubricating material within the shell and provided with a traveller-receiving recess and an annular traveller, the outer wall of said recess being scalloped thereby to reduce friction on the traveller when the spinning ring is started up.

1,460,752. SUPPORTER. FREDERICK JAMES FULTON, Saginaw, Mich. Filed Sept. 6, 1921. Serial No. 498,666. 2 Claims. (Cl. 24—251.)

1. In a garment supporter, a body, a leaf hinged to the lower part of said body, a second leaf pivoted to

said body above the point of attachment of said lower leaf, said leaves adapted when closed to overlap each other with the upper leaf between the lower leaf and the body and a fastening device adapted to releasably secure said leaves in closed position.

1,460,753. PNEUMATIC-TIRE WHEEL. PATRICK J. GRIFFIN, Dorchester, Mass. Filed Dec. 1, 1921. Serial No. 519,260. 4 Claims. (Cl. 152—13.)

4. The combination with an inflatable tire-member having an air-valve flexibly combined therewith, and a wheel-felloe through which the said valve projects, having a chamber therein into which the valve may be turned down, a cover for said chamber pivotally connected to the wheel-felloe with capacity to be swung transversely into opened and closed positions respectively, said cover having an open slot in its swinging end, and a retainer pin on the wheel-felloe positioned to enter the said slot as the cover swings into closed position.

1,460,754. EXTENSION TABLE. JOSEPH HLOZEK, Cleveland, Ohio. Filed June 15, 1921. Serial No. 477,790. 2 Claims. (Cl. 45—113.)

1. An extension table comprising a supporting frame, a table top carried thereby but having vertical and tilting movement, a transverse member mounted upon the supporting frame at the middle thereof and upon which the middle of the table top normally rests, fixed upwardly inclined guides carried by the frame below said member, movable upwardly inclined slides slidably engaging said guides and movable outward therefrom, a leaf hinged at its inner edge to said slides and hingedly supported with its inner edge in spaced relation to the upper edges of the slides, said leaf being normally disposed beneath the table top, a second set of upwardly inclined slides connected to the first named set of slides and having sliding engagement therewith, the outer end portions of said second set of slides being horizontal, a second leaf carried upon the horizontal outer end portions of said last named slides and movable into position beyond the first named leaf, the table top and the first named leaf dropping down into position behind the second named leaf and flush therewith, and means operatively carried by the second named leaf and projecting beyond the inner edge thereof whereby the first named leaf may be raised to permit the second named leaf to be slid beneath the first named leaf and means whereby the table top may be raised to permit the superimposed leaves to be shifted beneath the table top.

1,460,755. FRUIT PICKER. ROY A. HOWE and JOHN F. IRISH, Bantam, Conn. Filed Jan. 21, 1922. Serial No. 530,835. 1 Claim. (Cl. 56—334.)

In a fruit picker cutting head, the combination of a receptacle provided with two side walls; an outwardly projecting semicircular ear located at the middle of one edge of each of said side walls; a second receptacle provided with two side walls; an outwardly projecting semi-circular ear located at the middle of one edge of each of said side walls, the two ears on the first receptacle being adapted to lie adjacent the inner surfaces of the side walls of the second receptacle, and the two ears on the second receptacle being adapted to lie adjacent the outer surfaces of the side walls of the first receptacle; and a rivet concentrically located relative to the two adjacent ears on each side of the head, said rivets being adapted to hingedly connect the said receptacles.

1,460,756. BUCKLE. ERNEST N. HUMPHREY, New Britain, Conn., assignor to The Traut & Hine Mfg. Company, New Britain, Conn., a Corporation of Connecticut. Filed Sept. 1, 1922. Serial No. 585,608. 2 Claims. (Cl. 24—78.)

1. In a buckle of the character described, two sheet metal members, one of said members having an elongated slot forming a hook passage, a hook on the other member, a yielding barrier carried by the hook member, and means for attaching one end of a belt to the hook member, said yielding barrier carried by said hook member being held in place by said belt-attaching means, said barrier being formed of sheet metal and having perforated ears at opposite edges through which said belt-attaching means extend, means for attaching the other end of said belt to the slotted member.

1,460,757. ADHESIVE. OTIS JOHNSON, San Diego, Calif. Filed Aug. 14, 1922. Serial No. 581,895. 7 Claims. (Cl. 87—17.)

3. An adhesive composition comprising the tacky substance of the soya bean, hydrated lime, and sodium fluoride.

1,460,758. PROCESS FOR DYEING SKINS, HAIRS, AND THE LIKE. OSKAR KALTWASSER and LEOPOLD KIRBERGER, Berlin and Berlin-Charlottenburg, Germany, assignors to Actien Gesellschaft für Anilin Fabrikation, Berlin, Germany. Filed Jan. 25, 1922. Serial No. 531,778. 2 Claims. (Cl. 8—5.)

1. The herein-described process for dyeing furs, feathers, hairs and the like material, consisting in acting on the material to be dyed with a solution of 2,7-dioxy-naphthalene in the presence of an oxidizing agent.

1,460,759. PROCESS FOR MAGNETIZING BODIES. EMIL KUHN-FREI, Zurich, Switzerland, assignor to Arnold Weinman, Zurich, Switzerland. Filed Nov. 20, 1919. Serial No. 339,309. 1 Claim. (Cl. 175—4.)

The herein described process of magnetizing bodies by means of an electro-magnet, consisting in reducing the temperature of the electro-magnet, placing the body to be magnetized with its poles on the poles of the electro-magnet, energizing the latter with a strong electric current for a sufficient period, then progressively decreasing the strength of the current, removing the poles of the body from those of the electro-magnet while the strength of the current is being decreased and simultaneously bridging the poles of the said body.

1,460,760. BASKET-SUPPORTING MEANS. JESSE E. MCGEE, Guntown, Miss. Filed Aug. 29, 1922. Serial No. 585,008. 3 Claims. (Cl. 224—29.)

1. A basket supporting means comprising a pair of spaced basket engaging rods, a pair of basket engaging clamps connected with said rods, a pair of substantially L-shaped rods slidably adjustable in said clamps, and means associated therewith for securement to a support.

1,460,761. CARD-INDEX TAB. HAROLD CURTIS MCPIKE and FRED A. SCHMITZ, Youngstown, Ohio, assignors to The General Fireproofing Company, Youngstown, Ohio, a Corporation of Ohio. Filed Feb. 16, 1922. Serial No. 537,018. 1 Claim. (Cl. 129—16.8.)

A tab for guide cards including a card body having a tab extension provided with a recess lying within the extension and also extending into the card body, a sheath of transparent material folded to embrace the tab projection so that the wings thereof cover opposite sides of the recess to provide a label-receiving compartment, and a vertical slot in one of the wings of the sheath located adjacent one of the vertical edges of the recess.

1,460,762. RAILROAD DITCHER. JEROME J. MILLER, Chadron, Nebr. Filed Nov. 21, 1922. Serial No. 602,445. 10 Claims. (Cl. 37—107.)

1. In a device of the class described, a car; a tractor movable along the car; depending digging conveyors carried by the tractor and located on opposite sides of the car, the conveyors discharging on the car; and a plow carried on one end of the tractor and adapted to traverse the car.

1,460,763. MAGNETO. GIUSEPPE NATOLI, Turin, Italy. Filed Feb. 7, 1922. Serial No. 534,741. 8 Claims. (Cl. 123—149.)

1. In a magneto, a continuous shaft, shaped to provide an integral flange and an enlarged portion; means for rotatably supporting said shaft, a magnet fastened on said shaft, to said flange and enlarged portion, and a core having a winding thereon, said core being fastened to said shaft supporting means and having shoes embracing the poles of said magnet.

1,460,764. STUFFING BOX FOR ROTARY DRIERS, KILNS, CALCINING FURNACES, RETORTS, OR THE LIKE. HARALD NIELSEN, London, and BRYAN LAING, Hatfield, England. Filed Dec. 8, 1922. Serial No. 605,725. 7 Claims. (Cl. 286-7.)

1. A gas tight stuffing box for the relatively moving parts of a rotary heating apparatus comprising a multiplicity of resilient packing rings surrounding one of said relatively moving parts and spring controlled members resiliently maintaining one of said resilient packing rings in contact with the other of said relatively movable parts in such manner that said resilient gland rings are capable of rotary movement and longitudinal sliding movement relative to the other of said relatively moving parts.

3. A rotary heating apparatus having in combination, a stationary pipe, a sleeve surrounding said pipe and spaced radially therefrom, a series of rings on said sleeve, a rotary retort, resilient means on said pipe and contacting with the outer of said rings for maintaining the inner of said rings in contact with said retort.

1,460,765. ROTARY BRUSH. ALBERT L. NORRIS, Jacksonville, Fla. Filed May 9, 1921. Serial No. 467,988. 2 Claims. (Cl. 15-28.)

1. A rotary brush comprising a supporting plate, a motor mounted thereon, a motor shaft extending below said plate and provided with a reduced end, a supporting plate mounted on the reduced end of said shaft, said supporting plate being provided with an enlarged central portion, a base plate mounted on said supporting plate, said base plate being provided with an enlarged opening for the reception of the enlarged portion of the supporting plate, bristles secured to said base plate, and a cap mounted on the end of said shaft and secured to said base plate and said supporting plate.

1,460,766. RECOVERING ZIRCONIUM OXIDE. MALCOLM N. RICH, Cleveland, Ohio. Filed Sept. 8, 1919. Serial No. 322,415. Renewed Nov. 21, 1922. 5 Claims. (Cl. 23-13.)

1. In the recovery of zirconia, the process which comprises producing a solution of normal zirconium sulfate in water substantially free from sulfates of alkalis and alkaline earths and of slightly acid nature, allowing said solution to stand with frequent agitation for about four days, and separating the mother liquor from the deposited basic zirconium sulfate.

1,460,767. MOTOR FUEL. FREDERICK W. ROHRS, Baltimore, Md. Filed Dec. 17, 1921. Serial No. 523,193. 5 Claims. (Cl. 44-9.)

1. A motor fuel comprising from 1 to 3 parts of acetone, 25 to 35 parts of petroleum distillate, and 50 to 80 parts benzol, said parts of benzol varying from the minimum to the maximum above set forth in direct variation to the increase in temperature.

1,460,768. MOUNTING AND DRIVING OF GEAR WHEELS. FREDERICK HENRY ROYCE, Derby, England, assignor to Rolls Royce Limited, Derby, England, a Company of Great Britain. Filed Dec. 13, 1922. Serial No. 606,684. 10 Claims. (Cl. 74-7.)

1. In a gear mounting, the combination of a driving shaft, a driven shaft coaxial therewith, the latter shaft being hollow, a connecting shaft located within said driven shaft, connecting means between one end of the connecting shaft and the adjacent end of said driving shaft, other connecting means between the opposite end of said connecting shaft and the driven shaft, and a slipping driving connection between adjacent ends of the driven shaft and driving shaft.

1,460,769. PIPE. AUGUSTUS M. SAUNDERS, McKeesport, Pa., assignor to National Tube Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed July 7, 1921. Serial No. 483,023. 1 Claim. (Cl. 137-75.)

A wrought metal pipe having a male thread on one end, an integral flat faced shoulder flange formed at the rear end of said male thread by upsetting the wall of the pipe outwardly only, said flange being adapted to form a bearing for a gasket, and an integral threaded

coupling portion formed on the opposite end of said pipe, said coupling portion being formed by upsetting and expanding the pipe wall outwardly until said coupling portion has a substantially thicker wall than said pipe and an inner diameter equal to the outer diameter of said male threaded end, said male end being of shorter length than said coupling member, and said pipe being of the same internal diameter throughout its length with the exception of the expanded coupling portion, substantially as and for the purpose described.

1,460,770. TYPEWRITER ATTACHMENT. HAYES C. STEVENS, Pittsburgh, Pa. Filed Apr. 6, 1921. Serial No. 458,899. 1 Claim. (Cl. 197-133.)

In a typewriter attachment the combination of a supporting frame having a pair of side members spaced apart, means on said attachment for supporting rolls of paper, a transversely extending reel mounted on stub shafts journaled in suitable bearings secured to said side members, said reel comprising a transversely extending roller member, a plurality of radially extending spring fingers mounted on said roller member, and an outer surrounding cylindrical core member supported on said spring finger members and adapted to receive paper to be reeled thereon.

1,460,771. SHOCK ABSORBER. GEORGE H. STONER, East Boston, Mass. Filed Aug. 13, 1917. Serial No. 185,807. 7 Claims. (Cl. 267-60.)

1. In a shock absorber, a pair of oppositely faced relatively movable members, a headed stem on one member

and disposed towards the other member, a bearing piece slidably mounted on said stem and confined by said head, a spring interposed between said stem carrying member and said bearing piece, and a second spring disposed between said piece and the other member.

1,460,772. RADIATOR CORE. FRANK TODD, Minneapolis, Minn. Filed July 26, 1920. Serial No. 399,176. 1 Claim. (Cl. 257-129.)

A fin strip formed of a single piece of material and comprising two substantially similar portions, each of said portions being formed of a plurality of fin portions, the inner edge of one of said fin portions extending downwards and joining the inner edge of the adjacent fin portion from which it is spaced, the outer edge of said last named portion extending downwards and joining the outer edge of the next adjacent fin portion from which it is likewise spaced, said two similar portions being joined together by lips extending transversely from adjacent extensions from said inner edges of adjacent fin portions, each of said fin portions being cut away semi-circularly at the center of one side so that when said two similar portions are brought together a tubular aperture extends axially through the structure so formed.

1,460,773. FORGED BRAKE-BEAM FULCRUM AND PROCESS OF MAKING SAME. ERNEST R. VIBERG, Montreal, Quebec, Canada. Filed Oct. 24, 1921. Serial No. 509,999. 7 Claims. (Cl. 29-164.)

1. A brake beam fulcrum comprising a flat sheet bent to substantially cylindrical form, projections from one end of said sheet turned inwardly and forming a tension member seat and tension member retaining lugs, and outwardly directed feet at the opposite end of the fulcrum.

1,460,774. MANUFACTURE OF 2-OXY-1-ARYLNAPHTHYLAMINES. ANDRÉ WAHL, Enghien, and ROBERT LANTZ, Paris, France, assignors of nine-tenths to Societe Anonyme des Matières Colorantes & Produits Chimiques de Saint-Denis, Paris, France. Filed Feb. 14, 1922. Serial No. 536,507. 4 Claims. (Cl. 260-128.)

1. The herein described manufacture of 2-oxy-1-arylnaphthylamines by causing primary amines to react with α -halogen- β -naphthols.

2. As a new manufactured product, the 2-oxy-1-arylnaphthylamines having at the ordinary temperature the form of crystals which are insoluble in water but soluble in the caustic alkalis and are precipitated from their solution in the caustic alkalis by the acids.

1,460,775. TIRE STRUCTURE. WILLIAM A. WALSH, Avoca, Pa. Filed Feb. 28, 1923. Serial No. 621,797. 2 Claims. (Cl. 152—22.)

2. An inflatable tire comprising a casing, independent tubes arranged therein, each of said tubes having individual valve stems, and a holding member common to both of the stems, said stems being positioned one adjacent to the other and having opposed flat surfaces substantially in contact, said flat faces having coacting means maintaining the stems in assembled relation.

1,460,776. RECORD SHEET OR CARD. JOHN ASHLAND WHERRY, New Orleans, La. Filed June 14, 1922. Serial No. 568,193. 6 Claims. (Cl. 283—61.)

1. The combination of a record sheet, a removable band of paper or the like transversely surrounding the upper portion of said sheet, and self-contained means for effecting interlocking engagement between said sheet and band to prevent movement of the band longitudinally of the sheet.

1,460,777. SPOTLAMP. CAMERON A. WHITSETT, Chicago, Ill. Filed May 14, 1920. Serial No. 381,370. 24 Claims. (Cl. 240—7.)

1. In combination, a supporting member for mounting on or adjacent the windshield of an automobile, a shaft extending through said supporting member, a housing at one end of said shaft and rotatable therewith concentrically about the axis of said shaft, a stem projecting from said housing and adapted to support a spot lamp, a control handle at the other end of said shaft, said control handle and said shaft having joint reciprocatory motion

along the axis of said shaft or rotational motion concentric with the axis of said shaft, and gearing connecting said shaft with said stem whereby the reciprocatory motion of said handle rotates said stem about its individual axis and rotational motion of said handle throws said stem and said lamp laterally to either side of the axis of said shaft.

catory motion of said handle rotates said stem about its individual axis and rotational motion of said handle throws said stem and said lamp laterally to either side of the axis of said shaft.

1,460,778. CAPSULE-COUNTING MACHINE. WARREN WILKIE, Detroit, Mich., assignor to Parke, Davis & Company, Detroit, Mich., a Corporation of Michigan. Filed May 15, 1922. Serial No. 561,115. 12 Claims. (Cl. 211—8.)

7. In a machine for counting articles, the combination with an endless conveyor comprising a series of laterally extending slats having recesses in their outer faces each adapted to receive a predetermined number of the articles, said conveyor having an upwardly inclined portion, means for feeding the articles in excess upon said conveyor, and means near the upper end of said upwardly inclined portion of said conveyor for removing the excess articles from successive portions of said conveyor.

9. In a machine for counting articles, an endless conveyor comprising alternate series of blank and apertured slats, said apertured slats having laterally spaced groups of recesses each adapted to receive a predetermined number of the articles.

1,460,779. LOG RAFT. STANLEY WOOD, Victoria, British Columbia, Canada. Filed July 22, 1921. Serial No. 486,831. 3 Claims. (Cl. 9—15.)

1. A log raft comprising side booms, a log supporting floor suspended between said booms, and means for raising or lowering said floor.

- 1,460,780. WOODWORKING MACHINERY. ERLE G. ASHLEY, Memphis, Tenn., assignor of one-third to Harry B. Anderson and one-third to Dwight R. Thomas, both of Memphis, Tenn. Filed Aug. 31, 1921. Serial No. 497,256. 4 Claims. (Cl. 144—3.)

1. In a woodworking machine, a plurality of cutter-heads arranged in opposed pairs, individual driving means for the cutter-heads, a plurality of spring-pressed feed rollers for feeding a strip of wood to each cutter-head, a saw in advance of each pair of cutter-heads and lying in a plane passing between them, a plurality of spring-pressed feed rollers acting on each strip between the cutter-heads and the saw, and common driving means for all said feed rollers, substantially as set forth.

- 1,460,781. PNEUMATIC-TIRE PROTECTOR. CHARLES W. BAIN, Indianapolis, Ind. Filed Mar. 17, 1922. Serial No. 544,593. 1 Claim. (Cl. 152—16.)

A tire protector consisting of a plurality of plates to surround the tire, anchoring hook flanges extending from two of said plates, certain of said plates having lugs, certain of said plates having barrels to fit intermediate said lugs, disks intermediate said lugs and barrels, pivot rods passing through said lugs, barrels and disks, and bearing members in said barrels to abut said disks at the ends of the bearing members.

- 1,460,782. AUTOMOBILE SPRING-SUPPORTING MECHANISM. ANDREW J. BARRON, Cincinnati, Ohio, assignor to Cincinnati Horse Shoe & Iron Company, a Corporation of Ohio. Filed May 11, 1922. Serial No. 560,062. 2 Claims. (Cl. 267—54.)

1. The combination with the longitudinal chassis-channel of an automobile, of a side-spring supporting-hanger disposed on one side of said chassis-channel and

bearing thereagainst, hanger-supporting means disposed on the other side of said chassis-channel, fastening connections between said hanger and said hanger-supporting means, and a filler-member disposed in said chassis-channel and comprising a top and bottom and two ends, the latter projecting beyond the top and bottom, at one side thereof, to form lips bearing against said hanger-supporting means.

- 1,460,783. RESILIENT WHEEL. ARTHUR E. BAUMAN, Akron, Ohio. Filed Nov. 26, 1921. Serial No. 517,928. 9 Claims. (Cl. 152—29.)

1. A resilient wheel having a resilient body having substantially transverse recesses, therein, spring means in said recesses, said spring means substantially throughout their margins, intimately contacting with the walls of the recesses, and retaining lugs on said spring means disposed at an angle to said walls and overlapping said body.

- 1,460,784. FOLDING RULE. FRED BUCK, Saginaw, Mich., assignor to The Lufkin Rule Company, Saginaw, Mich., a Corporation of Michigan. Filed Nov. 7, 1921. Serial No. 513,247. 8 Claims. (Cl. 33—106.)

1. In a folding rule, a plurality of pivotally connected sections, one of said sections having a pair of spaced longitudinal scales, another section having a base indication thereon, an extension member extending longitudinally of and slidably secured to said last-mentioned section between said scales and provided with means adapted to designate a figure of said scales for co-operation with said base indication.

- 1,460,785. CONTROL MECHANISM. JOHN BUCKLEY, Mattapan, Mass. Filed Mar. 25, 1921. Serial No. 455,425. 5 Claims. (Cl. 74—27.)

1. In a device for connecting a governing mechanism with a mechanism controlled thereby, a yoke including

two substantially parallel arms provided with rack teeth, a pinion adapted to mesh with either of said racks to drive said yoke, a member having a groove and slot connection with said yoke, and electro-magnetic means responsive to movement of the governing mechanism for moving said member so as to bring either of said racks into engagement with said pinion.

1,460,786. DIESTOCK. WILLIAM V. BULMAN, Philadelphia, Pa. Filed Nov. 2, 1921. Serial No. 512,298. 16 Claims. (Cl. 10—114.)

1. A die stock comprising a body having an axial bore; a plurality of superposed cutting dies arranged within the bore; means for removably securing each of the dies in the body, and a changeable guide in the upper end of the body having a plurality of intersecting bores respectively corresponding to the respective cutting dies whereby by properly setting the guide a rod or pipe of any desired size may be directed by the guide to the related cutting die.

1,460,787. JAR COUPLING FOR OIL-WELL CASINGS. JULIUS GORDON BURCH, Bartlesville, Okla. Filed Feb. 26, 1921. Serial No. 445,254. 6 Claims. (Cl. 166—10.)

1. A well casing jar coupling comprising a pair of telescoping sleeves each adapted for connection with a casing section, one of said sleeves embodying a pair of spaced shoulders, an enlargement formed on the other of said sleeves and freely operable intermediate said shoulders and engageable with either thereof and means carried by one of said sleeves and cooperating with the other of said sleeves for maintaining continuity of the casing bore during relative movement of the sleeves.

1,460,788. DRILLING WELLS. FRANK J. CARMAN, San Francisco, Calif. Filed Mar. 21, 1922. Serial No. 545,574. 2 Claims. (Cl. 255—1.)

1. In the drilling of oil and gas wells with the aid of a mud circulation, the process which comprises adding to such a circulation material having a flocculating effect upon clay.

1,460,789. INTERNAL-COMBUSTION ENGINE. WALTER R. CRIDER, Indianapolis, Ind., assignor of one-half to Henry R. Carroll, Evansville, Ind. Filed Aug. 4, 1920. Serial No. 401,230. 26 Claims. (Cl. 123—71.)

1. In an internal combustion engine, the combination of a cylinder having a combustion chamber, a piston movable in said chamber, means for admitting fuel to said chamber, a single valve for controlling the exhaust of the spent gases form said chamber and the supply of air thereto, operating connections for said valve whereby it opens the air supply to the combustion chamber during the compression stroke of the piston and a valve at the opposite side of the chamber to control the supply of fuel thereto, substantially as set forth.

1,460,790. WELDING ROD. JAMES H. CRITCHETT, Niagara Falls, N. Y., assignor to Union Carbide & Carbon Research Laboratories, Inc., a Corporation of New York. Filed June 24, 1921. Serial No. 480,231. 7 Claims. (Cl. 219—12.)

1. A welding rod or the like consisting of an iron alloy containing carbon and a substantial amount of chromium.

1,460,791. GAME-PIECE SUPPORT. RALPH C. CUNNINGHAM, Tacoma, Wash. Filed Dec. 29, 1922. Serial No. 609,730. 1 Claim. (Cl. 99—11.)

In combination a plurality of block like game pieces and a support for the same comprising an elongated strip having a horizontal bottom, a substantially vertical rear wall, a supporting ledge along the forward edge of said strip and a supporting surface inclined rearwardly and upwardly from said ledge toward the rear side of the strip, the upper rear edge of the strip being beveled off and the length of the game pieces being such with respect to the width of the inclined supporting surface that the upper ends of said game pieces project beyond said supporting surface but lie within the vertical plane of the rear wall of the strip, whereby the projecting por-

tions of a plurality of the game pieces may be simultaneously grasped to lift and play them and whereby the elongated strip may be tipped over rearwardly without interference by the said game pieces, to expose the said game pieces to the view of other players.

1,460,792. COMBINATION LADDER. EUGENE DARNELL and LOUIS G. CASSIDY, Wichita, Kans. Filed Apr. 17, 1922. Serial No. 553,707. 11 Claims. (Cl. 228—18.)

1. A ladder comprising a major section consisting of side bars and rungs extending between the side bars, a minor section consisting of side bars and rungs extending between the side bars, the minor section being adapted to fit between the side bars of the major section, locking feet pivotally mounted on a rung of the minor section and provided at their lower ends with means to engage a rung on the major section, a cross bar connecting the locking feet just below their pivotal mounting, resilient connections between the locking feet and the minor section holding the locking feet normally away from the major section, and means for limiting the pivotal movement of the locking feet in a direction away from the major section.

1,460,793. FEEDING AND ROTATING MEANS FOR ELECTRODES. ARTHUR P. DAVIS, Brooklyn, N. Y., assignor to Elmer A. Sperry, Brooklyn, N. Y. Filed Mar. 27, 1917. Serial No. 157,608. 8 Claims. (Cl. 176—51.)

1. The combination with an electrode holder, of mechanism for feeding the electrode therethrough including

a plurality of feed rollers, means for mounting the same to engage at substantially opposite points the electrode, means for oppositely altering the planes of rotation of each roller to vary the rate of feeding during the operation of the lamp and means for driving the rollers.

1,460,794. TUBE CASING. JOHN H. GRUBE, Los Angeles, Calif., assignor to Grube Auto & Tire Specialties Corp'n, Phoenix, Ariz., a Corporation of Arizona. Filed July 22, 1921. Serial No. 486,698. 10 Claims. (Cl. 152—13.)

9. In a pneumatic tire, a tubular outer casing having its inner periphery divided and adapted to be attached to a wheel rim, a rubber inner sheath member arranged within the outer casing and spanning the divided inner periphery of the latter and having side portions extending over the inner surface of each of the side portions of the casing, a second rubber sheath member of tubular form and divided on its inner periphery and formed with a thickened tread portion to lie against the inner surface of the outer casing opposite the tread surface of the latter, the side portions of said second sheath member extending over the inner surface of the side portions of the other sheath member and having soft rubber edges, an inflatable inner tube arranged within the second sheath member, and a cord fabric reinforcement embedded in said second sheath member and extending throughout the side portions thereof and across the thickened tread portion with a slack in the tread portion whereby said tread portion may have free elastic action, and with the fabric in the side portions arranged to have a stiffening effect to confine active elastic movement to the tread portion.

1,460,795. SHINGLE. NORMAN P. HARSHBERGER, Chicago, Ill., assignor to Tee-Lok Shingle Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 14, 1921. Serial No. 522,223. 7 Claims. (Cl. 108—7.)

1. A plurality of shingles laid in a row, each shingle having a flat body portion with two of its opposite end margins folded back on themselves on opposite sides of the shingle body to provide a double thickness of material along each of such margins, said shingles being laid

with the folded portion on the under side of one shingle having an abut joint with the folded portion on the upper side of the adjacent shingle and with said folded portions overlapping the body portions of said shingles.

1,460,796. LINING FOR BALL MILLS. ERIC HEDBURG, Kingman, Ariz. Filed Apr. 5, 1920. Serial No. 371,291. 1 Claim. (Cl. 83—9.)

In a mill lining a section in the form of a segment of a circle and having grooves at its inner side and feet at its outer side and having slots passing transversely through the same, some of the slots being located between the grooves and other of the slots being located at the side edge portions of the segment.

1,460,797. ATTACHMENT FOR FRUIT CRATES. RICHARD W. HICKS, Akron, Ohio. Filed Mar. 11, 1922. Serial No. 542,824. 5 Claims. (Cl. 217—58.)

1. A device adapted to be attached at the open side of a crate comprising, a guard of substantially the length of the crate, and hinged end members constructed to secure the guard to the crate in an inclined position relative to one edge of the open side thereof with one edge of the guard resting upon said edge of the crate.

1,460,798. FINGER RING. CARLTON W. HOLMES, Long Beach, Calif., assignor of one-half to Zebulon S. Skinner, Los Angeles, Calif. Filed June 7, 1921. Serial No. 475,611. 1 Claim. (Cl. 63—15.)

A ring of the character shown having a ring body with a setting therein, said ring body increasing in thick-

ness as it approaches the opposite sides of said setting and having circumferentially extending grooves in its top side at opposite sides of said setting, a series of jewels seated in said grooves, at each side of said setting, and securing wires for each set extending from the setting, through said jewels and at its end secured through an opening in the body of the ring, as shown and described.

1,460,799. SCREW JACK. ALVIN L. JOHNSON, Worcester, Mass., assignor of forty-eight per cent to W. Goulding Warren, Holden, Mass., and four per cent to Albert E. Fay, Worcester, Mass. Filed Feb. 3, 1922. Serial No. 533,971. 17 Claims. (Cl. 254—103.)

1. In a jack, the combination with a work rest, of a depending oscillatory arm, means comprising a pawl for causing the oscillation of said arm to raise or lower the rest, and means whereby the swinging of the arm to its limiting position will shift the pawl.

1,460,800. CARTRIDGE-FEEDING MECHANISM FOR MACHINE GUNS. MILLARD L. JOHNSTON, Utica, N. Y. Filed Sept. 16, 1918. Serial No. 254,217. 4 Claims. (Cl. 89—33.)

2. In a machine gun having a cartridge carrier, a latch carrier, a demountable latch mounted in said carrier, automatic means for actuating said latch laterally, and means for impinging against said latch carrier, whereby to actuate said latch in a longitudinal manner to revolve the cartridge carrier to bring the cartridges into loading position.

1,460,801. DIRECTIONAL RADIO RECEIVING SYSTEM. ROBERT H. MARRIOTT, Bremerton, Wash. Filed June 20, 1921. Serial No. 478,960½. 1 Claim. (Cl. 250—11.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

In a radio receiving system, a loop antenna circuit, an earth connection therefor, a thermionic repeater hav-

ing its grid and filament connected with said ground connection and a connection from the plate circuit of

said thermionic repeater to loop circuit, whereby the loop-to-ground potentials are repeated and impressed upon the loop antenna circuit.

1,460,802. RAILWAY-CAR-JOURNAL ROLLER BEARING. KARL F. NYSTROM, Montreal, Quebec, Canada. Filed June 11, 1921. Serial No. 476,775. 7 Claims. (Cl. 64-62.)

6. In a railroad journal bearing, a split rolling element carrying cage, a sleeve surrounding the cage and holding the same in assembled position around a journal and forming a rolling element raceway, a casing surrounding the sleeve, a seat at the outer end of said casing to limit outward movement of the sleeve, an adjustable ring at the inner end of the case to urge said sleeve toward the seat and thrust rings at the ends of the cage held rigidly between the seat and adjustable ring, and adapted to engage the end shoulders of a journal.

1,460,803. ANTISKID CHAIN. EDWARD A. PORTZER, St. Marys, Pa. Filed Apr. 2, 1921. Serial No. 458,161. 1 Claim. (Cl. 267-74.)

The combination with an anti-skid device including parallel side chains, of a cylinder carried by one end of each chain, a cap arranged upon one end thereof, a hook for engagement with the opposite end of each chain extending within each cylinder, a coil spring in each cylinder and normally urging said hooks toward the cyl-

inder, and a finger engaging element carried by each hook, said element interposed between the hook and the cylinder and in the same plane as the hook, whereby said finger engaging element is moved against tension of the spring for the purpose of engaging or disengaging the hook from the chain.

1,460,804. VALVE STEM FOR PNEUMATIC TIRES. AR B. SHAW, Medford, Mass., assignor to Shaw Specialty Co. Inc., Boston, Mass., a Corporation of Massachusetts. Filed July 18, 1922. Serial No. 575,801. 5 Claims. (Cl. 152-12.)

1. A valve stem having a valve seat in its upper end; a tubular member adjustable lengthwise of said stem and having a valve seat in its inner end; a spring-pressed rod within said tubular member having a ball formed upon its inner end; and a valve having a socket to receive said ball.

1,460,805. RADIATOR CORE. HENRY SWAY, Cincinnati, Ohio. Filed Sept. 22, 1920. Serial No. 411,962. 2 Claims. (Cl. 257-130.)

1. A radiator section including a transversely corrugated strip of sheet metal, the peaks of the ridges of said corrugations and the bottoms of the cavities of said corrugations being gradually curved towards their outer ends, said strip being folded intermediate its ends to form air passageways and the peaks of said ridges on the opposite sides of said fold abutting against each other, the portions of the folded strip between said abutting ridges forming substantially frusto-conical tubular portions at the ends of the air passageways, and the ends of said strip being connected together.

1,460,806. TIMER ELEVATOR FOR FORD CARS. VICTOR W. THOMAS, Waukegan, Ill. Filed Feb. 21, 1921. Serial No. 446,641. 3 Claims. (Cl. 123-146.5.)

3. Means for mounting and actuating a timer for ignition system of an internal combustion engine comprising a spiral gear adapted to be mounted upon the end of the cam-shaft of the engine and having an axial extension, a casing having a socket for journalling the extension of

said gear whereby said casing is located and a bearing is provided for the outer end of the cam-shaft, a shaft journaled in said casing, a second spiral gear mounted upon said shaft and meshing with said first-mentioned gear,

an extension from said casing terminating in a platform through which said shaft extends, and arms extending from said casing to secure said casing as positioned through the interfitting of said first-mentioned gear therewith.

1,460,807. SELF-LOADING FIREARM. FRITZ WALTHER and GEORG WALTHER, Zelle-Mehlis, Germany. Filed Aug. 29, 1921. Serial No. 496,757. 3 Claims. (Cl. 42-49.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. Self-loading fire arm comprising in combination with the barrel a forestock hingedly connected with the barrel, a locking device for securing said forestock in its normal position and for releasing the same so that it can swing to an angular position with regard to the barrel, a second locking device for locking said fore end of the stock in this angular position and for releasing the same so that it can be swung to a position at approximately right angles to the barrel to serve as handle for screwing the barrel in or out of the breech.

1,460,808. LOGGING BULL HOOK. OSCAR A. WIRK-KALA, Kent, Wash. Filed Aug. 10, 1922. Serial No. 581,036. 5 Claims. (Cl. 24-123.)

1. In a bull hook in combination, a hook body, and a pair of dogs mounted for oscillation on bearings in said

hook body adapted for the passage of a knobbed cable between them and further adapted to have their free ends bear on each other on one side of a line drawn through said mounted ends.

1,460,809. OIL RETAINER FOR JOURNAL BOXES. ADAM BOOMERSHINE, Dayton, Ohio, assignor of one-half to John C. Slager, Dayton, Ohio. Filed Jan. 30, 1919. Serial No. 273,938. 18 Claims. (Cl. 64-22.)

11. An oil retainer for journal boxes, comprising a bulkhead fixed against lateral motion and oil tight with reference to the journal box through which the journal shaft passes, said bulkhead having an aperture larger than the journal, a bulkhead on the journal, and means independent of the journal and indifferent to the position of the journal in the journal box, for maintaining face to face contact between said bulkheads.

1,460,810. DUMPING VEHICLE. ADDI BENJAMIN CADMAN, Beloit, Wis., assignor to Warner Manufacturing Company, Beloit, Wis., a Corporation of Wisconsin. Filed Mar. 26, 1921. Serial No. 455,841. 10 Claims. (Cl. 298-10.)

1. A dump truck having a frame mounted on wheels, a body supported on said frame to be tilted sidewise for unloading, mechanical operating gearing for tilting said body, an operating shaft having driving connections with said gearing and extending out on the side of said truck, and an operating crank for said shaft having means for engaging the same to turn only in such a way as to operate the gearing to dump the truck load on the opposite side of the truck.

1,460,811. EXPLOSIVE-ENGINE ATTACHMENT FOR BICYCLES. ERNEST S. CALENO, Dayton, Ohio. Filed May 27, 1921. Serial No. 473,074. 2 Claims. (Cl. 180-33.)

2. The combination with a bicycle, of an explosive engine detachably secured thereto, a crank shaft propelled by said engine, a sprocket on said shaft, a rear sprocket,

a shaft on which the latter is mounted, a sprocket chain transmitting power from the front to the rear sprocket,

and a pair of longitudinally adjustable side plates secured to the bicycle, in which the rear sprocket shaft is journaled, for the purpose specified.

1,460,812. GUIDE FOR SEWING MACHINES. JOHN J. DRAKE, Elizabeth, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Jan. 20, 1920. Serial No. 352,871. 11 Claims. (Cl. 112—15.)

4. A guide for hat sewing machines comprising, opposed depending rests defining an inverted trough, said guide being formed within the trough with a shoulder and with a groove at one side of and above the level of said shoulder, substantially as and for the purpose specified.

5. In a hat sewing machine, the combination with stitch-forming mechanism including a horizontally reciprocating needle and feeding mechanism including opposed feeding and presser-wheels, of means in advance of said stitch-forming and feeding mechanisms and between said wheels for reversely folding the marginal portion of a hat trim adjacent the inwardly disposed free edge of a pre-formed edge fold and presenting said free edge and reversely folded portion to the stitch-forming and feeding mechanisms.

1,460,813. CONTROL MECHANISM OF EXCAVATING MACHINES OR THE LIKE. HOLLIS H. HARRIS, Lorain, Ohio, assignor to The Thew Shovel Company, Lorain, Ohio, a Corporation of Ohio. Filed Mar. 21, 1919. Serial No. 284,109. 25 Claims. (Cl. 192—3.)

1. The combinations with a throttle controlled engine of an operating member driven thereby, a friction clutch between the engine and the operating member, means for

controlling the clutch, throttle operating means, a single manually operable controlling member connected with

both said means and determining the operation of said means by its position, and means for separating the throttle control means from said member.

1,460,814. VOICE-CURRENT TELEPHONE REPEATER. JOHN H. HOMRIGHOUS, Oak Park, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 27, 1919. Serial No. 285,586. 19 Claims. (Cl. 179—170.)

1. In a telephone system, a pair of lines joined by a two-way repeating apparatus, said apparatus consisting of two repeaters each normally in full repeating relation to one of said lines, and a voice current controlled circuit changing device included in the energizing circuit of each repeater and operating with its associated repeater to render the other repeater inoperative.

1,460,815. ELECTRIC HEATER. LEE P. HYNES, Albany, N. Y., assignor to Consolidated Car-Heating Company, Albany, N. Y., a Corporation of West Virginia. Filed Feb. 10, 1922. Serial No. 535,584. 22 Claims. (Cl. 219—63.)

1. An electric heater comprising a metal shell made in separable parts suitably secured together, a refractory insulating duct fitted into the shell, and a heating coil extending loosely through the said duct.

1,460,816. CAMERA SUPPORT. ROBERT KROEDER, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Sept. 8, 1922. Serial No. 586,994. 2 Claims. (Cl. 95—86.)

1. In a folding camera, the combination with a body and a bed hinged thereto, of a folding pivoted leg for

supporting the bed when extended, a plate on the bed supporting the leg bearings and a threaded nut adapted

for the connection of a camera supporting tripod, said nut being arranged to secure the plate to the bed.

1,460,817. FLEXIBLE JOINT. BENJAMIN LIEBOWITZ, New Rochelle, N. Y. Filed Nov. 26, 1921. Serial No. 517,942. 6 Claims. (Cl. 64-96.)

1. In a flexible joint of the character described, the combination with a flexible member and a pair of yoke members fastened thereto, of strut members fastened to said flexible member at points intermediate the points of attachment of said yoke members.

1,460,818. BURGLAR ALARM. JOHN W. LONGWORTH, Grand Rapids, Mich., assignor to Aben E. Johnson, Hastings, Mich. Filed Dec. 8, 1921. Serial No. 520,795. 10 Claims. (Cl. 116-79.)

2. In a burglar alarm, the combination of a housing adapted to receive a door knob, an alarm, an alarm control member, means for supporting said housing upon a door knob comprising a roller mounted in said housing to be engaged with a knob, a dog on said roller coacting with said alarm control member for holding said member in alarm locking position, said dog being disengaged by the rotative movement of said roller, a setting

and locking member having cam slots therein, a pin on said roller coacting with one of said cam slots, and an arm on said alarm control member coacting with the other of said cam slots so that the roller and the alarm control member are set and retained in set position.

1,460,819. RAIL FASTENER. EMERY M. MCVICKER, Milwaukee, Wis., assignor to J. F. McVicker, Milwaukee, Wis. Filed May 22, 1922. Serial No. 562,599. 6 Claims. (Cl. 238-304.)

3. A rail fastener including a tie plate having an opening therethrough and an undercut wall, a rail clip having upper and lower jaws for embracing an edge of the rail and a portion engageable beneath said wall, a spike in said opening behind said clip to retain said clip in rail securing position, and a recess in the rear wall of said opening for retaining said spike in clip engaging position.

1,460,820. HEATING APPARATUS. ANDRÉ M. MERTZANOFF, New York, N. Y., assignor to American Radiator Company, Chicago, Ill., a Corporation of New Jersey. Filed Jan. 20, 1919. Serial No. 272,019. 10 Claims. (Cl. 257-136.)

3. An apparatus comprising a heat emitting-element having a plurality of independent air passages therein provided with constricted outlet openings, a member surrounding said element and spaced therefrom to form an air passage, a housing enclosing said element and said member, and a damper for controlling the flow of air through the air passages in said element and the passages between said element and the member surrounding the same, substantially as specified.

1,460,821. UMBRELLA. THOMAS J. MORRIS, Richmond, Va. Filed Feb. 14, 1922. Serial No. 536,451. 13 Claims. (Cl. 135-20.)

1. In a device of the kind described, a housing frame open at the top, an umbrella in said housing frame and

having its central portion within the frame and ribs projecting upwardly from said central portion, and mecha-

nism attached to the umbrella and housing frame and arranged to raise the central portion of the umbrella frame and expand the ribs outwardly.

1,460,822. ANTISLIPPING ATTACHMENT FOR VEHICLE WHEELS. CHARLES MOSS, New York, N. Y. Filed Mar. 5, 1920. Serial No. 363,471. 3 Claims. (Cl. 152—14.)

1. In a device of the character described, an anti-slipping attachment comprising a tire-engaging member provided along its longitudinal edges with outwardly bent flanges, said member having apertures therein, and being pressed outwardly about said apertures to form recesses on the inner face of said tire-engaging member, and annuli on the outer face thereof, and tread means mounted upon said tire-engaging member between said flanges provided with apertures reamed at their ends and in alignment with said apertures of said tire-engaging member, the reamed portions at one end being engaged by said annuli and rivet members engaged through said apertures to secure said tread means to said tire-engaging member, the heads at one end of said rivet members being countersunk in said recesses on the inner side of said tire-engaging member, the heads at the other ends thereof being countersunk in said reamed portions at the exposed side of said tread means.

1,460,823. TIMER. JESSE C. OSBORN, Chicago, Ill., assignor to J. W. Duntley, Chicago, Ill. Filed Apr. 3, 1920. Serial No. 370,987. 1 Claim. (Cl. 200—27.)

In a timer the combination with a casing having a plurality of equally spaced apertures in the periphery thereof, of electric terminals engaged in said apertures and insulated therefrom, a stub shaft secured in the casing adjacent each of said terminals, a bracket pivoted on each of said shafts, a roller pivoted in each bracket, a lever also pivoted in each bracket on a different center than the roller, a contact member on the lever adapted to engage the electric terminal, a spring engaged around the shaft and having its extremities se-

cured to the lever and to the inside of the casing tending to hold the contact member on the lever in contact with the electric terminal in the casing, and a rotatable cam in the casing for normally holding the contact members separated and allowing said members to successively contact.

1,460,824. COMPRESSOR VALVE. FREDERICK W. PARSONS, Elmira, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Jan. 14, 1922. Serial No. 529,283. 5 Claims. (Cl. 230—24.)

1. In a compressor, the combination with the cylinder and piston, of a mechanically operated combined inlet and discharge valve for the cylinder, comprising a main valve member controlling the closing of the discharge at the end of the piston stroke and having closed ends, which control the opening and closing of the intake, an auxiliary valve member carried by the main valve member and controlling the opening point of discharge from the cylinder, and means for adjusting said auxiliary valve member to vary the opening point of discharge.

1,460,825. FLAT-ICING MACHINE. FRANK M. PETERS and WARREN H. HUNGERFORD, Chicago, Ill., assignors to Peters Machinery Company, Chicago, Ill., a Corporation of Illinois. Filed July 1, 1920. Serial No. 393,364. 9 Claims. (Cl. 107—1.)

1. In a cake machine, the combination of a frame having a supporting surface along which cakes are adapted to be moved, means adjacent the supporting surface for coating the surface of the cakes with a material, a magazine adapted to contain a supply of cakes, and a plurality of vertically movable pushers, adapted to reciprocate lengthwise of the supporting surface for withdrawing cakes from the magazine and advancing same to the coating means.

3. In a cake machine, the combination of a frame having a supporting surface composed of a plurality of slats spaced apart to afford slots therebetween, a cake magazine at one end of the supporting surface, a reciprocal frame with pushers adapted to be projected through the slots between the slats, above the surface of the latter, for withdrawing cakes from the magazine and moving same, step by step, along the supporting surface, a hopper for material to be applied to the

surface of the cakes, and means for successively coating the cakes withdraw nfrom the magazine with the material contained in the hopper.

8. In a cake machine, the combination of a stencil plate having an opening therethrough, means for applying a cake to the opening, a hopper for coating material and a member adapted to be projected from and returned under the hopper while the cake is applied to said opening, said member having opposed inclined surfaces, adapted to spread the coating material in both directions of its reciprocation over the surface of each cake.

1,460,826. FLY-CHASING SCREEN-DOOR ATTACHMENT. HERBERT PILGER, Plainview, Nebr. Filed Mar. 11, 1922. Serial No. 542,910. 2 Claims. (Cl. 230—7.)

1. The combination with a screen door, a fly frightening wheel mounted at the outer side thereof, a cable having one end engaging around the hub of the wheel and secured thereto, a retractile spring connected with the door and the opposite end of the cable, a further cable also having one end engaging around the hub of the wheel and secured thereto, and handles connected with the last mentioned cable, one of the handles being arranged at the outer side of the door and the other handle being arranged at the inner side of the door, the opposite end of the last mentioned cable extending through an opening within the screen door.

1,460,827. PREPARED ROOFING ELEMENT. ASA R. PURDY, Boundbrook, N. J., assignor to Ruberoid Co., a Corporation of New Jersey. Filed Dec. 3, 1921. Serial No. 519,684. 3 Claims. (Cl. 108—8.)

2. A self-spacing prepared roofing element having substantially parallel straight sides with a shoulder projecting from one side intermediate the ends, the shoulder being spaced from the lower end a distance defining the length to be exposed when the element is laid, the length of the shoulder being one-half the length of the element.

1,460,828. PROCESS OF SEALING VERTICAL COKING CHAMBERS. JOSEF SCHÄFER, Dortmund, Germany. Filed Dec. 3, 1920. Serial No. 428,171. 5 Claims. (Cl. 202—9.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. The process of sealing vertical coking-chambers and the like by first, closing the discharge-opening thereof by a granular sealing-agent; second, keeping a liquid in contact with said sealing-agent for forming a moist-seal adapted to draw said liquid up by capillary action and to hold it in readiness for evaporation as demanded by the process of dry-distillation; third, sealing the charging mouth of said coking-chambers by a dry-seal consisting of a granular sealing-agent of the same nature as utilized in said moist-seal; fourth, removing said moist-seal by opening the discharge-opening and discharging the carbonaceous product of dry-distillation; fifth, closing said discharge-opening and sixth, automatically transferring the granular sealing-agent of said dry-seal to said closed discharge opening for utilizing it as a sealing-agent in the building up of the subsequent moist-seal when said dry-seal is being broken up for the admission of a new charge, substantially as specified.

1,460,829. REVERSING MECHANISM FOR BY-PRODUCT COKE OVENS. LLOYD F. SCHRADER, New York, N. Y., assignor to Foundation Oven Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 22, 1919, Serial No. 325,570. 4 Claims. (Cl. 137—148.)

1. Mechanism for operating the air and gas valves of a coke oven, said mechanism including in combination actuating devices for said valves and a common motor for reversing at the same time the actuating devices for both sets of valves.

1,460,830. METALLURGICAL PROCESS. HERMAN G. C. THOFERN, Roselle Park, N. J.; Donald H. McLean administrator of said Herman G. C. Thofern, deceased. Filed Oct. 4, 1918. Serial No. 256,868. 4 Claims. (Cl. 75—27.)

1. A metal scavenging process consisting in introducing in the molten metal to be treated, during the

pouring of the molten metal into the ladle, an alloy of aluminum and magnesium in the proportions to said molten metal substantially as specified.

- 1,460,831. INTERNAL-COMBUSTION ENGINE. HERBERT L. THOMPSON, Elgin, Ill., assignor to Burgess-Norton Manufacturing Company, Geneva, Ill., a Corporation of Illinois. Filed May 27, 1921. Serial No. 472,944. 8 Claims. (Cl. 123-73.)

7. In a valve operating mechanism, the combination of a drive shaft, a rock shaft parallel with said shaft, a valve member mounted on said rock shaft and adapted to open and close a valve, an arm fixed to said rock shaft and extending radially toward the drive shaft, and a governor comprising a friction disc slidably mounted on said drive shaft and adapted to frictionally engage the end of said radial arm, yieldable arms mounted on said disc, and weights at the ends thereof, said arms and weights being actuated by centrifugal force to flex said arms and to effect the axial movement of said disc along said drive shaft.

- 1,460,832. PROCESS FOR THE RECOVERY OF THE ACTIVE PRINCIPLE OF THE SUPRARENAL GLANDS. KEIZO WOYENAKA, Tokyo, Japan, assignor to Jokichi Takamine, New York, N. Y. Filed Dec. 27, 1920. Serial No. 433,259. 10 Claims. (Cl. 167-7.)

1. The improvement in the process of extracting the active principle of the suprarenal gland, which consists in subjecting the gland to the action of a proteolytic enzyme before separation of the solution containing the active principle.

3. A process of purifying the crude active principle of the suprarenal gland, which consists in dissolving the same in an acid in quantity in excess of double the combining weight of the said acid with said product, and precipitating impure matter from said solution with alcohol.

- 1,460,833. PACKAGING SHINGLES. HERBERT ABRAHAM, New York, N. Y., assignor to The Ruberoid Company, a Corporation of New Jersey. Filed Mar. 10, 1922. Serial No. 542,564. 5 Claims. (Cl. 206-47.)

1. A package comprising a plurality of similarly recessed roofing elements arranged with the recesses in registration to form a groove, a nail-container of a shape complementary to that of the groove fitting in the groove, and fastening means binding said parts together.

- 1,460,834. HEADLIGHT CONSTRUCTION. SAMUEL F. ARBUCKLE, Connorsville, Ind., assignor to Monogram Lens Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 13, 1922. Serial No. 536,024. 2 Claims. (Cl. 240-48.4.)

1. A cover front for use with a headlight having a source of light and a reflecting surface, said cover front having means whereby rays of light reflected from the reflecting surface are deflected laterally to provide a horizontally wide spread driving light, said means comprising a plurality of vertical zones, each zone composed of vertical convex ribs, the central portion of the ribs of some of the zones being relatively flat, the curvature of the ribs of one zone being different from the curvature of the ribs of an adjacent zone, the relatively flat portion of said ribs having such common deflecting power as to overlap horizontally the projected light illuminating a central portion and a side area varying in intensity from the center to the side thereof.

- 1,460,835. PROCESS OF MAKING LIGHT DISTRIBUTORS AND MANUFACTURING THE SAME UNIFORMLY IN QUANTITIES. SAMUEL F. ARBUCKLE, Detroit, Mich., assignor to Monogram Lens Corporation, New York, N. Y., a Corporation of Delaware. Filed Apr. 11, 1922. Serial No. 551,645. 6 Claims. (Cl. 76-107.)

1. A process of making a mould for moulding a head light glass having a light refractive means extending across said glass, said process comprising providing a matrix material, predetermining the contour and relation of the refractive means to be produced in the glass, making a shaping tool with a cutting edge provided with a contour to form an impression on said matrix from which said light refractive means can be produced in said glass, and cutting the matrix with said tool to form a plurality of ribs or grooves in a reverse replica of said tool and arranging the same to have the predetermined relation, one with the other to make a complete mould.

- 1,460,836. GLASS-MOLD BURNISHING PROCESS AND APPARATUS. SAMUEL F. ARBUCKLE, Detroit, Mich., assignor to Monogram Lens Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 15, 1922. Serial No. 601,002. 6 Claims. (Cl. 76-101.)

1. The process of making a mold for producing a glass article which consists in providing a tool whose cutting

edge conforms exactly to the positive shape of the surface configuration to be produced in glass, cutting a mold blank to form the reverse replica of said tool in

said blank and finishing said blank with a finishing tool whose cutting edge is in exact configuration of a surface to be produced in glass.

1,460,837. WRENCH. ADOLPH BANGERT and FREDERICK MAY, New York, N. Y.; said Frederick May assignor of his entire right to Charles May, Jersey City, N. J. Filed July 18, 1921. Serial No. 485,611. 1 Claim. (Cl. 7-4.)

The combination, in a combination wrench, of two crossed and pivoted members, pipe-wrench jaws formed at one end of said members, nut-wrench jaws formed at the opposite end of said members, the pivotal point of said members being near said pipe-wrench jaws, an arcuate surface formed on the outer edge of one of said members near the nut-wrench jaws, and provided with notches on said surface, a ball pivotally secured to the other of said members at a point eccentric to said arcuate surface and extending thereover and having a plurality of notches formed on said ball and arranged to engage the notches on said arcuate surface, and a spring normally tending to separate said pipe and nut wrench jaws.

1,460,838. REFACING TOOL. ROSCOE BEAN, Berea, Ohio. Filed Oct. 7, 1920. Serial No. 415,371. 4 Claims. (Cl. 90-12.5.)

1. In a bearing surface reclaiming tool, a rotatable cutter carrier provided with a removable pilot or guide spindle, and a plurality of interchangeable multiple faced reversible cutters mounted thereon whereby the active cutting faces conjointly form cutting edges for rotation of the cutter carrier in either direction and clearance at the rear of the cutting edge being used.

1,460,839. TRAILER COUPLING. HARRY F. BIGGAM, Milwaukee, Wis., assignor to The Biggam Trailer Co., Milwaukee, Wis., a Corporation of Wisconsin. Original application filed Jan. 5, 1917, Serial No. 140,827. Divided and this application filed Apr. 9, 1921. Serial No. 460,015. 8 Claims. (Cl. 280-33.15.)

1. In a vehicle, the combination of a draw bar mounted to swing in a horizontal plane and having an open end, a coupling member detachably connected to the front end of the draw bar embodying a body portion, a horizontal pin at one end of the body portion and adapted to enter the open end of the draw bar, a vertical pin mounted in said coupling member, and a link connected to the vertical pin.

1,460,840. BUTTON. JOSEPH P. BOWLES, West New Brighton, N. Y. Filed Aug. 24, 1921. Serial No. 494,938. 4 Claims. (Cl. 24-90.)

1. A button comprising, a front side with thread holes therethrough, a rear side, an interior chamber having an outwardly flaring mouth on the rear side of the button with deflecting side faces extending into said chamber and merging in the thread holes, and a teat surrounded by said chamber having its base at the front side of the button and its stem extending into said chamber and having deflecting side faces terminating in a deflecting point; the thread holes being off-set radially from the base of said teat; the deflecting side faces of said bell mouth and chamber and the deflecting point and deflecting side faces of the teat serving to direct the needle to a thread hole.

1,460,841. CONTRACTION JOINT FOR ROADWAYS. BERNARD BRIDY, Chicago, Ill., assignor to Truscon Steel Company, Youngstown, Ohio, a Corporation of Michigan. Filed Aug. 7, 1922. Serial No. 580,299. 6 Claims. (Cl. 94-18.)

1. A dividing member for separating adjacent slabs of concrete roadways and the like consisting of a permanent strip extending upward from the lower face of the concrete roadway and a removable part extending from the upper surface of the roadway downward to the permanent part.

1,460,842. GOLF-STROKE COUNTER. HOWARD K. BROOKS, New York, N. Y. Filed Apr. 7, 1922. Serial No. 550,401. 1 Claim. (Cl. 235-121.)

In a golf stroke counter the combination of a dial having a series of numbers arranged on the face and near the

edge thereof, and a hand pivotally mounted on the dial adapted to be moved into registration with any of the numbers on the face of the dial, said hand intermediate

of its length having an upwardly bowed portion to facilitate the turning of said hand over the dial, said bowed portion constituting in effect a spring to maintain the free end of the hand in contact with the face of the dial.

1,460,843. SWING. JEREMIAH E. BROWN, Brooklyn, N. Y. Filed Apr. 28, 1922. Serial No. 557,207. 1 Claim. (Cl. 155—63.)

A portable swing comprising a pair of supports movable upon a foundation, said supports including rigid uprights, a beam fixed between said uprights, an open frame disposed longitudinally between said uprights, a plurality of linked rod connections between said frame and beam, seats interposed between adjacent pairs of said connections, a forwardly extending platform rigid with the center seat, a pedal hingedly engaged on said platform, flexible connections from the free end of said pedal to said beam, and springs interposed in the length of said flexible connections.

1,460,844. WAVE TURNER. FRANKLIN H. BULLIS, Brooklyn, N. Y. Filed May 1, 1922. Serial No. 557,650. 7 Claims. (Cl. 114—126.)

1. A wave turning apparatus of the class described comprising a wave turning element, means for movably mounting said element in connection with a ship or the like, and into operative and inoperative positions, said wave turning element being curved concavely upwardly and inwardly on the inner face thereof to turn waves produced by said ship inwardly in the direction of the ship.

1,460,845. LOOSE COVER AND CUTTER FOR HERMETICALLY-SEALED TINS. HENRY HERMANI, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed July 14, 1922. Serial No. 574,924. 6 Claims. (Cl. 220—48.)

1. In combination, a loose or supplemental cover for hermetically sealed tins or cans, a cutter carried by the cover for removing or cutting away the sealed or tagger-

tin top of the can when the cover is rotated on the same, and a handle carried by the cover normally lying in an inoperative position within the confines of the cover

and movable from such position to an operative position with the handle extending beyond the periphery of the cover for being grasped to rotate the same.

1,460,846. TYPEWRITING MACHINE. EDWARD B. HESS, Manhattan Beach, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 12, 1921. Serial No. 500,184. 6 Claims. (Cl. 197—30.)

1. In a typewriting machine, the combination with the key levers and type bars of levers in rear of the type bars which have arms operatively related with the key levers, and arms having their upper ends link-connected to the heels of the type bars above their pivots, the points of connection of each link with its type bar and associated lever arm being so related that a full depression of the key lever moves them into a straight line with the type bar pivot, the type bar then being at a considerable distance from the platen and completing its movement by its own momentum.

1,460,847. TYPEWRITING MACHINE. EDWARD B. HESS, Manhattan Beach, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 20, 1921. Serial No. 501,893. 9 Claims. (Cl. 197—30.)

1. In a typewriting machine the combination with the key levers and type bars of levers interposed between the rear portions of the key levers and the rear portions

of the type bars which are operatively connected with the key levers and have link connections with the type bars in the rear of their pivots, the points of connections of each link with its type bar and interposed lever being so related that a full depression of the key lever moves them into a straight line with the type bar pivot, the type bar then being at a considerable distance from the platen and completing its movement by its own momentum.

1,460,848. TYPEWRITING MACHINE. EDWARD B. HESS, Manhattan Beach, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 21, 1921. Serial No. 502,218. 15 Claims. (Cl. 197—30.)

1. In a typewriting machine, the combination with the key levers and the type bars, of connections interposed between the rear portions of the key levers and the rear portions of the type bars, said connections each comprising a sub-lever operatively connected with a rearwardly extending portion of the type bar, said sublever being mounted to move about an axis in the rear of the type bar pivot and having a toggle link connection with the rear portion of a key lever which is moved into toggle locking connection by the full depression of a key lever, the type bar then being at a distance from the platen and completing its movement by its own momentum.

1,460,849. TYPEWRITING MACHINE. EDWARD B. HESS, Manhattan Beach, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 2, 1921. Serial No. 512,352. 12 Claims. (Cl. 197—30.)

1. In a typewriting machine, the combination with the key levers and the type bars, of a vertically movable

segment to which the type bars are pivoted, posts depending from the segment, brackets through which the posts extend, springs surrounding the posts for normally holding the segment in its upper position, nuts engaging the brackets for adjusting the tension of the springs and means for depressing the segment to its lower position.

1,460,850. BRUSH. ALEXANDER HOKANSON, Burnside, Conn., assignor to The Carling Tool & Machine Company, Hartford, Conn., a Corporation of Connecticut. Filed Dec. 17, 1921. Serial No. 523,159. 2 Claims. (Cl. 15—206.)

1. A holder for a brush including two concave members united with their edges in substantial coincidence to form a rounded handle, one of the members being extended beyond the handle portion and provided with lateral flanges for engaging a brush element of the character described, said flanges converging above a plane defined by the mating edges of the handle portion and then diverging to form convexly curved opposed surfaces for gripping the brush therebetween substantially in the manner set forth.

1,460,851. LIFTING JACK. JOSEPH KAUPERT, Chicago, Ill. Filed Sept. 24, 1921. Serial No. 502,934. 7 Claims. (Cl. 284—119.)

1. A device of the class described comprising a vertically movable lifting member; means for automatically locking said lifting member in various positions of vertical adjustment; a vertically movable fulcrum member; means for automatically locking said fulcrum member in various positions of vertical adjustment; and a lever pivotally connected with both members, substantially as described.

1,460,852. AUTOMOBILE RADIATOR. NATHAN KRAMER and BENJAMIN KRAMER, Trenton, N. J., assignors to Trenton Auto Radiator Works, Trenton, N. J., a Firm. Filed Sept. 18, 1917. Serial No. 191,961. 3 Claims. (Cl. 257—130.)

1. A radiator having upper and lower water chambers connected together by vertically disposed water passages formed of duplicate strips having corrugated central portions and zig-zag marginal edge portions, the central corrugations being greater in number than the zig-zag edge

portions, said zig-zag edge portions being in contact with one another to form closures for the vertically disposed

water passages, said water passages being separated by fins forming horizontally disposed substantially hexagonal shaped air passages.

1,460,853. THERMOSTAT. WILLIAM A. LACKE, Chicago, Ill. Filed May 6, 1920. Serial No. 379,255. 4 Claims. (Cl. 236-47.)

1. A thermostat including a thermally movable arm, a member adjustable to different normal operative positions with respect to said arm and having two movements in all said positions, contacts carried by said member and engageable by said arm, clock controlled mechanism for effecting said movements when the member is in any normal position, said mechanism including a cam operable to effect one of said movements, and means to maintain the movements of the member imparted by said cam equal in extent in all normal positions of the member.

1,460,854. STREET INDICATOR. ANNA LEBRETON and
ERNEST TALBOT, Seattle, Wash. Filed Nov. 21, 1921.
Serial No. 516,790. 3 Claims. (Cl. 40—47.)

1. In a railway car, the combination with a web having street indicating names thereon, spools for said web, shafts for said spools, a reciprocatory rod, operative connections between said rod and the respective shafts and actuated by the alternate strokes of said rod for turning the spools in opposite rotary directions, and regulating devices to render said connections temporarily inoperative with respect to either of said spools selectively, of means

for effecting the reciprocation of said rod, said means comprising a frame secured to the car body and provided with a guideway, a bar movable axially in said guideway and arranged to normally support said rod, levers operatively connecting said bar to the rod, a lever provided on

the railway track and arranged to be influenced by the car wheels whereby said last named lever is influenced to cause said bar to elevate the rod through the instrumentality of the first named levers, and a spring to return the bar and rod to their lowermost positions.

1,460,855. ANNEALING BOX. IRVIN F. LEHMAN, Pittsburgh, Pa., assignor to Blaw-Knox Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Dec. 4, 1920. Serial No. 428,265. 5 Claims. (Cl. 263—49.)

2. As a new article of manufacture, an annealing box comprising a sheet metal body, and a sheet metal top portion, said body and top portions being united by a continuous weld, the outer surface of which is substantially flush with the general surface of the box whereby the box is free from any external shoulder at the junction of the body and top, said body being formed from a single bent sheet or plate having its vertical edges brought together and united by a weld, the outer surface of which is also substantially flush with the general surface of the box, substantially as described.

1,460,856. SHOCK-ABSORBER CONNECTION. RALPH M. LOVEJOY, Meredith, N. H. Filed Feb. 11, 1920. Serial No. 357,996. 9 Claims. (Cl. 267—10.)

4. A connection for shock absorbers having force-resisting means including a pivotally mounted arm, a curved guide upon the free end of said arm, a flexible member, substantially cylindrical in form, presenting a loop adapted to embrace a part of the mechanism which is movable relatively to said shock absorber with the limbs of the loop of said flexible member passing over said guide and a clamping saddle formed to fit the limbs of said loop, securing the ends of said flexible member to said arm.

1,460,857. CURTAIN GUIDE. FRANK McLESKY and WILLIAM P. W. JOHNSON, Chicago, Ill. Filed Oct. 31, 1921. Serial No. 511,552. 1 Claim. (Cl. 156—29.)

In combination with a shade having a roller provided with a circumferentially reduced portion at one end and the usual flat pin and pawls at the other end, a cup-shaped member glued over said reduced portion, a pin driven through said cup-shaped member and into said reduced end portion, and a cup-shaped member fastened over the opposite end of said roller and having an enlarged opening to receive said pin and pawls, said members being provided with radially extending flanges for guiding said shade.

1,460,858. BEETLING AND TREATMENT OF FABRICS. ROBERT W. R. MACKENZIE, Earlsholl, Fife, ERNEST H. ROBINSON, Perth, MORRIS FORT, Almondbank, and JAMES DAVID LUMSDEN, deceased, late of Almondbank, Scotland, by Susan A. R. F. Lumsden, Huntingtowerfield, Almondbank, Scotland; Robert W. R. Mackenzie, Earlsholl, Fife, Scotland; John G. Miller, Perth, Scotland; Robert O. Lumsden, Almondbank, Scotland; and Alexander P. Melville, Edinburgh, Scotland, executors of said James David Lumsden. Filed Dec. 28, 1920. Serial No. 433,745. 3 Claims. (Cl. 26—10.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. The process of beetling piece fabrics composed of vegetable fibres, which comprises treating the fabrics to remove the oil, fat, wax and resin content, and thereafter subjecting the fabrics to a beetling operation.

1,460,859. STAND OR HOLDER FOR CHRISTMAS TREES, FLOWERPOTS, ETC. MATHEW MAYER, Euclid, Ohio, assignor of one-half to Marie Mayer, Euclid, Ohio; I. R. Winsper administrator of the estates of said Mathew Mayer and Marie Mayer, both deceased. Filed Jan. 28, 1922, Serial No. 532,369. Renewed Jan. 8, 1923. 2 Claims. (Cl. 248—38.)

1. A stand comprising a triangular central plate, three legs and connecting members between the legs and the plate, said legs being pivoted to the connecting members by horizontal pivots, and two of said connecting members being pivoted to corresponding corners of the plate by vertical pivots, whereby the legs may be folded beside each other.

1,460,860. DEVICE FOR RESILIENTLY SUPPORTING TARGET DISKS AND THE LIKE. ARNOLD MICHOD, Yverdon, Switzerland, assignor to Cibles Automatiques Michoud Société Anonyme, Neuchâtel, Switzerland. Filed Mar. 31, 1923. Serial No. 628,996. 5 Claims. (Cl. 124—15.)

1. A device for resiliently supporting target disks and the like comprising a supporting member, a disk or disk

sections, stay bolts on which said disk or disk sections are secured, the said stay bolts passing freely through said supporting member, and means associated with the

supporting member for yieldingly engaging the stay bolts to normally maintain the same and the disk or disks in position and when the disk or disks are struck to permit the stay bolts to move radially as well as axially.

1,460,861. ADJUSTABLE WING FOR WINDSHIELDS. FREDERICK L. MILLER, Des Moines, Iowa. Filed May 18, 1921. Serial No. 470,662. 2 Claims. (Cl. 296—84.)

1. In a device of the class described, a tube having one end serrated, a shaft slidably and rotatively mounted within said tube having its ends projecting beyond the ends of said tube, an elbow member on each end of said shaft, one end of one of said elbows being serrated to coact with the serrated end of said tube, a spring on the opposite end of said shaft between the corresponding ends of said tube and said elbow, a nut for adjusting said spring, a wing member and means for securing said wing member to said elbows, and means for clamping said tube to a support.

1,460,862. SORTING TABLE. GIORGIO PIERETTI, San Francisco, Calif. Filed Nov. 21, 1921. Serial No. 516,569. 3 Claims. (Cl. 198—33.)

1. A sorting table of the character described, comprising a pair of traveling belts running side by side, means

to deliver objects to one of said belts, means to reverse the position of the said objects and to deliver them to the other belt whereby both sides of a series of objects may be inspected at one place by the operator.

1,460,863. BEATER DEVICE FOR HOG-SCRAPING MACHINES. WILLIAM PRATT, Des Moines, Iowa. Filed Sept. 13, 1921. Serial No. 500,423. 6 Claims. (Cl. 17—11.)

1. The combination of a rotary shaft, a supporting bracket thereon provided with a series of radial supporting plates, a beater belt secured to the forward face of each of said supporting plates, an auxiliary plate adjacent to the forward face of said belt, means for securing said supporting plate, said belt and said auxiliary plates together, the last said plate being of a length slightly greater than the length of the first said plate and provided with a forwardly extending curved portion at its outer end.

1,460,864. POWDER BOX. LE ROY ROOT, New York, N. Y., assignor to Scovill Manufacturing Company, a Corporation of Connecticut. Filed Feb. 28, 1922. Serial No. 539,918. 3 Claims. (Cl. 132—82.)

1. A vanity box for containing loose powder having a bottom compartment and a cover, a powder container positioned in the bottom of the box and bodily removable therefrom, said container comprising a flexible plate formed with a downwardly extending flange and having powder distributing orifices, a pocket open against the plate and secured to the plate under its outer edge the other end of the pocket being of flexible material and a thin disk closing the end of the pocket, the material of the pocket being removably intertured under the lower edge of the disk, and a spring arranged outside the container and bearing against the under side of the flange.

1,460,865. COLOR-CHIP-PASTING MACHINE. CLARENCE E. SHARP, Gibbsboro, N. J. Filed Apr. 14, 1922. Serial No. 552,560. 9 Claims. (Cl. 216—14.)

1. In a color chip pasting machine, a rotatable and slidable folder sheet holding means, means for applying an adhesive to said sheet in spots in different localities

of the folder sheet during the sliding movement of said holding means in one direction and means for supporting

color chips in stacks, and means for elevating said chips to cause them to contact with the folder sheet in the regions of the adhesive thereon.

1,460,866. DIRIGIBLE LIGHT FOR AUTOMOBILES. WILLIAM E. STONE, Oklahoma, Okla. Filed Mar. 7, 1921. Serial No. 450,262. 1 Claim. (Cl. 240—62.)

In a dirigible light mechanism for automobiles, a vehicle body, fenders, upwardly inclined fender-supporting arms attached to the front ends of the side rails of said body and each provided with a vertical tubular standard extended tightly through the adjacent fender above its supporting arm and connecting said arm, fender and side rails solidly together, a vertical shaft journaled through each standard and having curved upper end, a spider on the end of said curved portion, a crank on the lower end of each of said shafts, a tie rod and arms connecting the knuckles of the steering mechanism, a rod connecting the rear ends of said cranks, and a steering rod for actuating said tie rod.

1,460,867. GASOLINE FILTER. WILLIAM C. STROWBRIDGE, Hartford City, Ind., assignor of one-half to L. E. Werry, Hartford, Ind. Filed Jan. 19, 1921. Serial No. 438,401. 1 Claim. (Cl. 210—164.)

In a filter, a hollow body, a series of spaced semicircular staves situated in the hollow body, a foraminous partition supported on said staves so as to divide the hollow body into an upper and a lower chamber, a sponge

or other absorbent material situated in the upper chamber, a distributor situated in the upper chamber, said upper chamber provided with an inlet and said lower chamber provided with an outlet.

1,460,868. JIG FOR ASSEMBLING LOCOMOTIVE FRAMES. JOHN P. SYKES, Wallingford, and Harmon E. Stover, Philadelphia, Pa. Filed July 26, 1922. Serial No. 577,617. 7 Claims. (Cl. 29—89.)

1. The combination in a jig, of a foundation plate; a saddle structure consisting of a base plate and two sections secured thereto, each section having a bracket to support a frame of a locomotive; spacing plates between the sections of the saddle; and bolts connecting the sections.

1,460,869. FLEXIBLE COUPLING. JOSEPH W. THROPP, Trenton, N. J. Filed Dec. 12, 1921. Serial No. 521,854. 3 Claims. (Cl. 64—96.)

1. The combination in a flexible coupling, of two hubs, each having a series of jaws, the jaws of one hub alternating with those of the other hub, the bearing faces of each jaw having longitudinal recesses therein; coiled springs located in the recesses between the jaws; removably positioned means for retaining the springs in the recesses, the longitudinal center of the spring being so related to the center line of the coupling that the springs, when pressure is applied, will be compressed on lines at right angles to the longitudinal line of the springs.

1,460,870. SELF-IGNITING-MATCH CONTAINER. JENNY TIMMEL, Ridgefield, N. J. Filed May 3, 1922. Serial No. 558,141. 2 Claims. (Cl. 206—32.)

1. A device of the class described comprising a hollow back member having its lower edge bent into substantially the form of a U in cross-section, so as to provide a match-holding compartment, said compartment being insertable into a match safe, a substantially wedge-

shaped tongue having an exposed, roughened edge, said tongue being secured to said lower edge of the back member, and resilient means in the hollow back for normally urging said matches against said roughened edge.

1,460,871. AUTOMATIC STOP FOR PHONOGRAPHS. GEORGE C. TROTTER, Chicago, Ill., assignor to Plymouth Phonograph Parts Co., Plymouth, Wis., a Corporation of Wisconsin. Filed Oct. 20, 1919. Serial No. 332,032. 14 Claims. (Cl. 192—123.)

1. In a phonograph, the combination of a rotary record-supporting means, a brake adapted when released to automatically brake upon and arrest the movement of said record-supporting means, an electro-magnet, the armature of which when deenergized engages the brake and holds it in its inoperative position, a source of electrical supply, a swiveled tone-arm, a contact below and insulated therefrom, a contact carried by and within the tone-arm and adapted to contact with the first mentioned contact when the tone-arm is at a certain point of its travel, and electrical connections between the electrical supply, the electro-magnet and the two contacts, whereby when the circuit is completed by the contacts the electro-magnet is energized and its armature magnetized to release the said brake.

1,460,872. SYSTEM FOR COOLING FLUE GASES. HOWARD H. UTLEY, Florence, Colo., assignor to River Smelting & Refining Company, St. Louis, Mo., a Corporation of Maine. Filed Jan. 6, 1921. Serial No. 435,413. 8 Claims. (Cl. 266—15.)

1. In a furnace comprising a heating chamber and a flue leading therefrom, a cooling system for said flue comprising a plurality of separate cooling units, a supply of cooling medium and an overflow for said units, and means whereby said units are permitted to expand and contract and are capable of being moved bodily without interrupting the flow of cooling medium to and from the same, each unit consisting of a cylindrical shell closed at its ends and a pipe connected to said supply and extending through one end of said shell and terminating therein close to the other end thereof.

1,460,873. FLUID GAUGE. WALTER G. WERBECK, deceased, late of Chicago, Ill., by Carl W. Hagemann, administrator, Chicago, Ill., assignor to S. S. P. Manufacturing Co., Chicago, Ill. Filed Mar. 26, 1921. Serial No. 455,909. 10 Claims. (Cl. 73—54.)

1. In a fluid gauge, the combination with a pair of oppositely disposed valve casings having centrally aligned bores; a removable transparent tube arranged to engage said bores; movable packing boxes associated with said valve casings; and means pivotally mounted on said valve casings for engagement with said packing boxes for holding said boxes in operative position.

1,460,874. WOODCUTTING MACHINE. ALPHONZO WHITE, Winchendon, Mass., assignor to Baxter D. Whitney & Son, Inc., Winchendon, Mass., a Corporation of Massachusetts. Filed Sept. 6, 1921. Serial No. 498,811. 34 Claims. (Cl. 144—78.)

1. In a wood working machine for operating a bit and hollow mortising chisel, in combination, means for non-rotatably supporting a hollow mortising chisel, means for rotating a bit within the hollow chisel, and hydraulically operated means for exerting a predetermined feeding pressure upon the bit and chisel so that if either the bit or chisel strikes a hard spot in the work the feeding movement of both will be arrested.

1,460,875. ROTARY GEAR PUMP. ALPHONZO WHITE, Winchendon, Mass., assignor to Baxter D. Whitney & Son, Inc., Winchendon, Mass., a Corporation of Massachusetts. Filed Sept. 27, 1921. Serial No. 503,554. 9 Claims. (Cl. 103—126.)

5. In a rotary gear pump, in combination, a casing having a high pressure chamber, a plurality of gears for forcing liquid into said chamber, means for supplying liquid to the low pressure side of said gears, means for rotating said gears, communications between the high pressure chamber and the respective gears, an adjustable relief valve for controlling the maximum pressure in the high pressure chamber, and valves operable selectively to close one or more of said communications and by-pass the liquid back to the liquid supply means without being subjected to the pressure of the high pressure chamber.

1,460,876. PROCESS FOR THE MANUFACTURE OF KETONES. ROBERT R. WILLIAMS, Chicago, Ill., and DONALD H. WHITE, Berlin, N. H., assignors, by mesne assignments, to Seth B. Hunt, trustee, Mount Kisco, N. Y. Filed Apr. 3, 1919. Serial No. 287,285. 7 Claims. (Cl. 260—134.)

1. A process for the manufacture of ketones, which process consists in subjecting vapors of secondary alcohols to the action of brass heated to temperatures ranging from 500° C. to 800° C.

1,460,877. KEY ADJUSTER FOR CONNECTING-ROD BEARINGS. VICTOR YORK, Los Angeles, Calif. Filed Aug. 28, 1922. Serial No. 584,920. 3 Claims. (Cl. 64—55.)

1. In an adjustable bearing of the class described, the combination of: a body forming a head; a strap so bent that the ends thereof fit over said head; bolts securing said strap to said head in a position providing a space between said strap and said head; bearing blocks in said space; a tapered key operating between said head and the innermost of said blocks for forcing said blocks together, said key extending through an opening in said strap; a bracket secured against said strap by said bolts, said bracket extending outwardly along said strap,

there being an opening in said bracket through which said key may extend, the outer end of said bracket being bent back over the end of said key and having a hole therein; a screw extending from the end of said key and passing through said hole in said bracket; and an adjustment nut upon said screw on each side of said over-extending end of said bracket, for adjusting the position of said screw relative to said bracket.

1,460,878. COIN-CHANGING MECHANISM. DAVID ALLEN, New York, N. Y. Filed Dec. 6, 1921. Serial No. 520,304. 2 Claims. (Cl. 133—5.)

1. The combination of a movable member, a lever, a change container having separate packages of coins stacked therein and provided with a discharge opening, a coin ejector pivoted intermediately of the ends, one end movable through said opening and a link connected with the other end of said lever and positioned in the path of said movable member whereby when said member is actuated in one direction, said lever will be swung to eject a coin.

1,460,879. VENDING MACHINE. DAVID ALLEN, New York, N. Y. Filed Aug. 19, 1922. Serial No. 582,965. 13 Claims. (Cl. 211—8.)

1. A vending machine comprising a delivery mechanism including a rotatable support provided with a curved element for receiving, supporting and delivering an article of merchandise during the delivery operation of said mechanism, and a pivoted stop element extended over said element and deflected to an inoperative position by the article carried by said element and further automatically movable to operative position to engage and arrest the operation of said support when said element is in normal position and empty.

2. A vending machine comprising an article delivery mechanism including a rotatable member provided with a retaining element for receiving, supporting and delivering an article of merchandise during the operation of said mechanism, and a pivoted stop bar, the pivot for said bar being disposed at one end thereof and said bar extending transversely of said element and deflected

to inoperative position with respect to said member by the article carried by and to be delivered from said member, the free end of said bar automatically movable to engage said member when said element is in normal position and empty of an article of merchandise thereby arresting the operation of said mechanism.

1,460,880. WATER METER. BENJAMIN ADOLPHE ARNAUD, Lyon, France, assignor to Société Lyonnaise De Compteurs D'Eau, Lyon, France. Filed Aug. 31, 1920. Serial No. 407,090. 1 Claim. (Cl. 73—28.)

A volumetric meter for liquids comprising a cylindrical casing, an inlet tube and an outlet tube for the liquid connected to said casing, two members each having the shape of a sector of a cylinder and comprising passages and channels for the flow of the liquid, fitted closely in said casing while leaving a cylindrical space between them co-axial with said casing, a sleeve provided with longitudinal openings and transverse apertures mounted centrally in said casing valves carried by said sleeve, plates adapted to be oscillated by the movement of the liquid, tappets carried by said valves and actuated by said plates to oscillate said valves, and lever mechanism actuated by one of said plates.

1,460,881. RADIATOR. PIERRE J. H. BERNARD, Montreal, Quebec, Canada. Filed Aug. 22, 1921. Serial No. 494,202. 3 Claims. (Cl. 257—141.)

3. The herein described radiator comprising a rectangular casing, hollow partitions within said casing, means for circulating hot water therethrough, the top and bottom ends of the casing having perforations therein providing air passages between the partitions of the casing, and a water supply tank for supplying water to the hollow partitions of the casing.

1,460,882. VENDING MACHINE. WILLIAM BETTS, Johnson City, N. Y. Filed Dec. 9, 1921. Serial No. 521,142. 2 Claims. (Cl. 133—1.)

1. In a vending mechanism, a receptacle provided with a partition forming a pair of coin receiving compartments, a spring controlled element pivotally connected

to said partition and normally positioned to deposit coins into one of said compartments during a predetermined number of operations of the vending mechanism of the machine, and means engaging with said ele-

ment for shifting the same from normal position to cause the depositing of a single coin into the other of said compartments after each predetermined number of operations of said delivery mechanism.

1,460,883. ROTARY BRUSH. SAMUEL C. BOUGHER, Philadelphia, Pa. Filed Mar. 13, 1922. Serial No. 543,185. 2 Claims. (Cl. 15-180.)

1. As a new article of manufacture, a base having a plurality of concentrically arranged grooves and sets of through openings, the openings of each set being spaced by said grooves, brush units comprising circularly formed twisted body wires carrying projecting metal brush strands, said units seating respectively in said grooves, and fastening staples passing through said through openings to clamp said units to said base.

1,460,884. NUT LOCK. OCTAVE JOHN BOUTTE, Beaumont, Tex., assignor of one-half to John D. McCall, Beaumont, Tex. Filed Apr. 12, 1922. Serial No. 551,948. 4 Claims. (Cl. 151-62.)

1. A nut lock comprising a base having an aperture for a bolt, parallel flanges on the base and a slide having finger elements engaging with said flanges on both sides thereof, a recess being formed between said elements corresponding to the width of the nut to be locked.

1,460,885. MINE-CAR SKID. THOMAS L. CAMPBELL, Berlin, Pa. Filed Aug. 4, 1920. Serial No. 401,159. 1 Claim. (Cl. 188-36.)

A skid for insertion intermediate a car wheel and track having its upper surface substantially parallel with the tread of the track, a tongue integral with the skid and extending upwardly and above said surface at the forward end of the skid, an attaching strip

member on said skid in contact with the upper surface of said tongue and extending rearwardly to said surface, and the rear end of the strip terminating in ad-

vance of the rear end of the skid and constituting an abutment rising from said surface and in the path of travel of the car wheel.

1,460,886. PRIMING DEVICE FOR INTERNAL-COMBUSTION ENGINES. CHARLES E. CHAPMAN, Fort Edward, N. Y., assignor of one-half to Joseph Goodfellow, Fort Edward, N. Y. Filed July 8, 1922. Serial No. 573,641. 13 Claims. (Cl. 123-180.)

1. A priming device for internal combustion engines including a body bar, a fuel valve carried by said bar and provided with a depending drip nozzle, a throttle valve upon the bar provided with an upstanding mixing tube having its upper end disposed to receive fuel dripping from said nozzle, an arm extending from the bar, a lever pivoted upon said arm, and links extending between the lever and said valves, the lever being operable for simultaneously opening or closing the valves.

1,460,887. FLIER FOR SPINNING, TWISTING, DOUBLING, AND ANALOGOUS MACHINES. PERCY CLOUGH, Keighley, England. Filed Aug. 14, 1922. Serial No. 581,713. 3 Claims. (Cl. 118-57.)

1. A flier for a spinning, twisting, doubling and analogous machine, comprising a horizontal member for attachment to a spindle, two legs depending from said horizontal member, a gapped ring at the foot of each leg for the reception of thread to be laid on to a bobbin, each gapped ring being offset from the vertical plane of each leg, and movable means on each gapped ring to trap the thread therein to impede same from escaping accidentally therefrom.

- 1,460,888. METHOD OF CONTINUOUSLY MELTING VITREOUS ENAMELS. FREDERICK D. COOK, Fairmont, W. Va. Filed Dec. 10, 1920. Serial No. 429,658. 3 Claims. (Cl. 49-77.)

1. The herein described method of forming vitreous enamels which consists in utilizing a melting chamber formed to prevent collection of melted enamel in a pool and permit the enamel to run continuously from the chamber as it melts, in continuously withdrawing and quenching the melted enamel and in controlling the temperature of the enamel during its withdrawal and prior to quenching.

- 1,460,889. SPRING WHEEL. WILLIAM E. CRAWFORD, Hayre, Mont. Filed Jan. 11, 1923. Serial No. 612,061. 5 Claims. (Cl. 152-45.)

1. A spring wheel comprising main side discs or plates having central openings, a hub positioned in said central openings, spokes carried by said hub, blocks slidably mounted on said spokes, means to resiliently retain said blocks in normal position upon said spokes, means carried by the disks to resiliently retain said blocks in central position, and side central closing plates mounted on said hub and secured against said first mentioned central plates.

- 1,460,890. CALF FEEDER. JERE L. CROOK, JR., Jackson, Tenn. Filed Aug. 24, 1921. Serial No. 494,910. 1 Claim. (Cl. 119-17.)

An animal feeder comprising a container having a dished bottom and an annular wall depending around the said bottom, a feeding tube leading from the low point

of the said dished bottom through the said depending wall, a nipple carried by the outer end of said feeding tube, a guard disk fitted around the said nipple, and a cut-off in the feeding tube.

- 1,460,891. SEWING MACHINE. ALBERT H. DE VOE, Westfield, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed June 22, 1918. Serial No. 241,371. 56 Claims. (Cl. 112-2.)

8. In a machine of the class described, in combination, stitch-forming mechanism, step-by-step feeding mechanism, endless fabric stretching and holding mechanism, and of shear trimming mechanism having pairs of movable and stationary blades, each pair of cooperating blades being supported and actuated from opposite sides of the work, and means for actuating the movable blades including rock-shafts extending transversely of the plane in which the work advances.

- 1,460,892. AUTOMOBILE BRAKE. NEWTON C. DIVELBISS, San Francisco, Calif. Filed Mar. 1, 1920. Serial No. 362,450. 3 Claims. (Cl. 188-30.)

1. A vehicle brake having a hub plate provided with an annular series of serrations consisting of alternate beveled and offset faces arranged on radial lines, a pivotal tongue of segmental form provided with a radial terminal for contact with said beveled faces and engaged with said shoulders, and means for actuating the tongue.

- 1,460,893. AUTOMOBILE BRAKE. NEWTON C. DIVELBISS, San Leandro, Calif. Filed Oct. 18, 1920. Serial No. 417,557. 1 Claim. (Cl. 188-30.)

A vehicle brake having a hub plate provided with an annular series of ratchet teeth, a housing enclosing the hub plate and provided with guides having parallel faces

disposed perpendicular to the plane of the housing, a dog reciprocally mounted between said guide faces for movement toward and from the plane of the ratchet teeth, a

spring for yieldingly impelling the dog toward the plane of said ratchet teeth, and operating means connected with the dog for withdrawing the same in opposition to its actuating spring out of engagement with the ratchet teeth.

1,460,894. CASING CUTTER. ARTHUR DIX, Taft, Calif. Filed July 12, 1921. Serial No. 484,031. 9 Claims. (Cl. 81—195.)

1. A casing cutter comprising a trip spear; a pull rod slidably extending through said spear; a plurality of slips mounted on said spear; teeth formed on the outer face of said slips arranged to engage the inner face of the casing; teeth on the inner face of each slip; upper dogs mounted in said spear arranged to engage the teeth on the inside of said slips; means for elastically holding such dogs in engagement with the teeth; a ring on said spear engaging the under face of said slips; a coiled spring under said ring arranged to elastically hold said ring in engagement with said slips; a plurality of lower dogs in said spear engaging the upper face of said ring; means for elastically holding said lower dogs in engagement with said ring; a plurality of latch bars slidably mounted in said spear; means on each latch bar for simultaneously detracting its associated upper and lower dogs; means on said pull rod for operating said latch bars; a plurality of cutting blades and means operated by said pull rod for operating said blades.

1,460,895. BATTERY TERMINAL. LEON A. DOUGHTY, Glenside, and FRANK S. CARLILE, Philadelphia, Pa. Filed Nov. 12, 1921. Serial No. 514,642. 2 Claims. (Cl. 204—29.)

2. In a battery terminal, a battery strap, a post integral therewith, projecting lugs on said post having in-

clined lower surfaces respectively, a washer arranged to fit over said post and having openings to respectively receive said lugs, said washer seating upon a coating part in such a position as to cause said lugs to engage the top surface of said washer when said washer is turned to thereby exert a clamping action, and a sealing compound about said post and compressed by said washer.

1,460,896. GAS BREAKER. JAMES JAY FREEMAN, Bradford, Pa. Filed Jan. 27, 1922. Serial No. 532,174. 4 Claims. (Cl. 48—180.)

4. A gas breaker for internal combustion engines, adapted for arrangement in the feed line or path of fuel from the source to the cylinders, which consists of reversely disposed conical gauze screens arranged in axially aligned relation with their apexes in juxtaposition, and a baffling disk arranged in transverse relation to the axes of the screens and adjacent to the apexes thereof and having a concave face directed in opposition to the path of fuel.

1,460,897. HOSE REEL. FRANK L. GREENLAW, Los Angeles, Calif. Filed Aug. 21, 1922. Serial No. 583,417. 4 Claims. (Cl. 242—86.)

3. A hose reel comprising a frame having a reel revolvably mounted thereon; an arm pivoted upon said frame and adapted to swing in a vertical plane, said arm having means for attaching a nozzle thereto; and means consisting of engaged serrated surfaces for variably adjusting the angular position of said arm.

1,460,898. PROCESS OF MAKING NITRATES. HEINRICH HAMPEL, Halle, Germany. Filed Apr. 7, 1921. Serial No. 459,203. 11 Claims. (Cl. 23—13.)

1. A cyclic process which comprises reacting on a soluble salt of a strong acid with a reagent comprising a

soluble salt of a weaker acid having a different base, and forming a difficultly soluble salt of the stronger acid containing the base of the weaker acid salt and a soluble salt of the weaker acid with the base of the stronger

acid salt, and converting the difficultly soluble salt of the stronger acid combined with the base of the weaker acid salt into the original reagent for reaction on a fresh quantity of strong acid salt.

1,460,899. LACE EYELET. JOHN T. HARPER, Leoti, Kans. Filed July 20, 1921. Serial No. 486,151. 1 Claim. (Cl. 24-145.)

A lacing eyelet consisting of a blank formed into substantially parallel spaced arms, one of the arms adjacent its free end having a slot therethrough, the other arm opposite said slot being reduced in width, a relatively narrow tongue extending from the reduced portion and adapted for passage through said slot, that portion of the tongue lying between said reduced portion and slot when the eyelet is fastened in position being disposed through an article to secure the eyelet in place, the lace being disposable intermediate said arm and said tongue and the bridge connecting the arm, the lace being adapted to directly contact with the inner surface of said bridge, and said bridge being curved whereby its inner surface will be convexed.

1,460,900. AUTOMATIC PRESSURE VALVE. JOSEPH G. HARRIS and GEORGE D. JAQUET, Jacksonville, Fla. Filed Apr. 18, 1922. Serial No. 554,645. 1 Claim. (Cl. 67-115.)

An automatic gas shut-off comprising a casing provided with a partition to form an inlet, an outlet and a diaphragm chamber, the latter being arranged over said inlet and outlet chambers and permanently communicating with the outlet chamber, a diaphragm secured with said casing and extending across the diaphragm chamber, a hollow cylindrical member secured in the upper portion of said inlet chamber and having its lower end constituting a valve seat, a supporting element secured in the top of and having its upper end offset with respect to said member, a lever eccentrically pivoted to the upper end of said element and arranged

over said inlet and outlet chambers, a valve stem extending through said member and having its upper end pivotally connected to one end of said lever and its lower end provided with a valve cooperating with said seat for opening and closing said inlet chamber with

respect to said diaphragm chamber, a counter-weight secured to the other end of said lever, and a vertically disposed push rod pivotally connected to said lever between its pivot and said seat and further connected to said diaphragm and extended from said casing.

1,460,901. WATCHMAN'S RECORDING MECHANISM. HARRY S. HART, Shreveport, La. Filed June 13, 1921. Serial No. 477,209. 1 Claim. (Cl. 234-40.)

A mechanism of the character described, consisting of a case, a clock disposed in one end of said case and having its dial visible from the outside, a separate recording dial arranged in the other end of said case and connected to move with the shaft of said clock, an adjustable indicating means secured to said case and operated manually to record the day, hour and minute on said recording dial, said means consisting of a rock lever pivoted to the case, operating rods extending in opposite directions from the outer ends of said lever, a third rod connected to the said lever and extending inward to move said rock lever, a rocking frame connected with said rod, a slotted depending arm, an adjustable indicator mounted in said rocking frame and having an indenting device passing through said slotted arm to indicate upon the recording dial when moved inward by action of said rocking frame.

1,460,902. WATCHMAN'S RECORDING MECHANISM. HARRY S. HART, Shreveport, La. Filed Mar. 13, 1922. Serial No. 543,380. 2 Claims. (Cl. 234-40.)

1. A recording mechanism, consisting of a casing, a time piece disposed in one end of said casing, a record dial arranged in the other end of said casing, a connection between said time piece and record dial, a shaft mounted in said casing, a trip device carried by said

shaft, a rock lever having an upper bent arm, an intermediate frame, and a pair of spaced lower arms, said upper bent end adapted to be engaged by said trip device to rock said lever, a marking device carried by the spaced arms of said rock lever to indent the said record sheet,

said marking device being adjustable in the spaced arms of the rock lever, an arm forming a backing to receive the impact of the marking device, and spring means to actuate the rock lever and to retain the marking device and arm in proper relation.

1,460,903. INDUCTOR FOR GAS BURNERS. CARL F. HAUSSLER and NICHOLAS W. PARK, Providence, R. I., assignors to The General Fire Extinguisher Company, Providence, R. I., a Corporation of New York. Filed May 8, 1920. Serial No. 379,747. 8 Claims. (Cl. 158—119.)

8. An inductor comprising a chamber and means for admitting compressed air thereto; a gas pipe entering the chamber and forming a conduit therein for gas; a tube having a portion within the chamber, closed except for admission openings for said gas from the conduit and for said air within the chamber, and leading out from the chamber to conduct away the mixed gas and air; a cock in the gas pipe within the chamber; a movable plate comprising a part of the chamber wall through which the stem of the gas cock protrudes; a cylindrical bearing for the stem, surrounding the stem and secured to said plate, preventing air leakage from the chamber; and a movable part on the tube adapted to close the air passage from the chamber into the tube and operatively connected with said gas cock within the chamber.

1,460,904. AUTOMOBILE SIGNAL. JOHN E. HILL, West Somerville, Mass., assignor of one-half to John M. Cummings, Stoneham, Mass. Filed Aug. 2, 1921. Serial No. 489,159. 1 Claim. (Cl. 116—53.)

In an automobile signal, the combination with a housing adapted to be secured to an automobile, of a shaft

journalled in said housing near its lower end and projecting beyond the same, a signal arm fast on said shaft, a sleeve surrounding said shaft and also projecting beyond the housing, a second signal arm fast on said sleeve, a second sleeve surrounding the first named sleeve and also projecting beyond the housing, a third signal arm fast on said second sleeve, said shaft and said sleeves each having a hand wheel fast on the projecting

portion thereof, by which the signal arms may be swung from a vertical concealed position downwardly into a horizontal display position, said signal arms having different colors, and a stepped rest for said signal arms when in display position, which is constructed to hold each arm at a slightly different angle from the other signal arms whereby two-color signals may be given.

1,460,905. FISH BAIT OR LURE. LEVIN B. HUNTINGTON, Annapolis, Md. Filed Dec. 21, 1921. Serial No. 523,893. 4 Claims. (Cl. 43—45.)

1. In a device as characterized, the combination of an elongated plate of concavo-convex form, both longitudinally and transversely, and having a broad portion disposed inwardly from a pointed front end portion and a rear portion tapering rearwardly from the broad portion, the longitudinal curvature of the plate gradually increasing in sharpness rearwardly from the broad portion throughout the major length of the rearwardly tapered portion, and rapidly increasing in sharpness at the extreme end of the tapered portion, whereby its motion in use simulates the erratic and irregular movements of a crippled fish, and a hook having its shank portion arranged against the lower face of said plate at the longitudinal center thereof, said shank extended up through said plate at two points and overlapping the upper face of the plate.

1,460,906. VANITY BOX. BURDON P. HYDE, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Feb. 5, 1923. Serial No. 616,889. 5 Claims. (Cl. 132—83.)

5. A loose powder box having a powder compartment, a ring having a flange tightly engaging the walls of the

compartment, a rim on the ring, the edge of the rim being bevelled and terminating in a downwardly extending flange, and a lid having a bevelled edge and flange extending downwardly therefrom co-operating with the ring to form a powder tight joint.

1,460,907. GOVERNOR. HARRY H. IDE, La Grange, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 25, 1920. Serial No. 405,980. 13 Claims. (Cl. 188—184.)

1. A device of the character described including a circular drum, an orifice through said circular drum, a rotatable shaft extending through said orifice, a mounting member secured to said shaft, a pair of semicircular weighted members pivotally secured to said mounting member encircling said drum and having their extremities in engagement while they are quiescent, a spring secured to said mounting member having its free extremities normally in engagement with said semi-circular weighted members, said spring being adapted to be rotated relative to said mounting member to adjustably increase or decrease its action upon said weighted members.

1,460,908. COIN-BANK REGISTER. JOSEPH BAKER INGALLS, Chicago, Ill. Filed Dec. 19, 1921. Serial No. 523,434. 3 Claims. (Cl. 235—100.)

3. A coin bank comprising a thin flat receptacle to be carried in a garment pocket, a closure at one end of the receptacle, a latch within the receptacle extending along one side edge thereof for securing said closure, a coin tube at the opposite end of the receptacle in a corner thereof, a counting mechanism at the latter end of the receptacle controlling the latch, and a dog at the side of and projecting into the coin tube to be actuated by an inserted coin, said dog controlling the counting mechanism.

1,460,909. TEMPERATURE-INDICATING DEVICE. GIUSEPPE JOANNES, Turin, Italy. Filed July 26, 1921. Serial No. 487,737. 2 Claims. (Cl. 73—52.)

1. A temperature indicating device for automobile radiators and the like, comprising a radiator plug, an

annular dial frame thereon, discs mounted in the frame having curved sight slots therein, a pointer pivoted in

the frame between the discs, a closed gas receptacle on the plug, and means operated by the expansion of gas in the receptacle to oscillate the pointer.

1,460,910. STOVEPIPE COUPLING. XAVIER JUNGE, Venturia, N. Dak. Filed Nov. 1, 1921. Serial No. 512,038. 3 Claims. (Cl. 285—186.)

1. A stove pipe holder or coupling consisting of a terminally spurred blank of wire or rod adapted for arrangement longitudinally of a length of pipe in spanning relation with the joint between sections thereof and having its spurs engaged with punctures in said pipe sections.

1,460,911. AUTOMOBILE BRAKE. JERRY J. KOHOUT and THOMAS R. GUNSON, Nunn, Colo. Filed Mar. 29, 1921. Serial No. 456,769. 2 Claims. (Cl. 188—5.)

2. An automobile brake comprising a pivotally mounted shank, a leg hinged to said shank, a foot formed on said leg and having a serrated face, a bell crank lever pivoted to said shank and slidably and pivotally connected to the leg, and means for imparting movement to the bell crank lever.

1,460,912. MECHANISM FOR OPERATING RAILROAD-CROSSING GATES. JOSEPH KRATOCHVIL, Chicago, Ill. Filed June 27, 1921. Serial No. 480,596; 18 Claims. (Cl. 246—127.)

1. A railway gate operating mechanism having a solenoid connected with the gate, an operating circuit in-

cluding the solenoid, a relay switch for controlling said circuit and a track circuit for actuating the relay and including a trip actuated circuit closer for operation

by the rolling stock, said relay having a magnet included in the operating circuit and an armature forming an element of the operating circuit.

1,460,913. SWITCHING APPARATUS FOR TELEPHONE SYSTEMS. DAVID LAURENTIUS LIENZÉN and KNUT LARSSON, Stockholm, Sweden. Filed Oct. 21, 1920. Serial No. 418,503. 7 Claims. (Cl. 179—27.5.)

1. A switching apparatus for telephone exchange systems, comprising stationary contacts arranged in radial groups with respect to a centre, a movable contact member, a single driving device adapted to rotate said movable contact member and to impart a radial movement thereto for engagement with any of the stationary contacts, and means for reversing the operative engagement between the driving device and said movable contact member for returning it to an idle position in relation to said stationary contacts.

1,460,914. COMBINED ELECTRIC SWITCH AND FUSE. JONAS G. LUNDGREN, Clear Lake, Iowa. Filed Jan. 26, 1921. Serial No. 440,005. 4 Claims. (Cl. 200—114.)

1. In an electrical switch, the combination of a switch block having spaced terminals, a casing carrying contacts adapted to make electrical connections with said terminals, a fuse in said casing connecting said contacts, said block having recesses in which said terminals are located and grooves therein in which portions of

said casings are adapted to fit, and detachable means for closing an end of said casing whereby when the switch is closed all of the conducting parts thereof are concealed from view.

1,460,915. SHOE-SALESMAN'S STOOL. SMITH L. LUTON, Hugo, Okla. Filed Sept. 12, 1922. Serial No. 587,835. 2 Claims. (Cl. 126—204.)

1. A device, of the class described comprising a support having an opening with the margin of the opening formed of three encompassing rests decreasing in diameter toward the interior of the support, a heat imparting medium supported on the innermost and smallest rest, a foraminous member resting upon the intermediate rest, and a heat retarding element resting upon the outer and largest rest, whereby the heat imparting medium, the foraminous member, and the heat retarding element are independently supported and independently detachable.

1,460,916. METHOD OF BURNING PULVERIZED FUEL. JOHN E. MUHLFELD, Scarsdale, and VIRGINIUS Z. CARACRISTI, Bronxville, N. Y., assignors to Locomotive Pulverized Fuel Company, New York, N. Y., a Corporation of Delaware. Original application filed Feb. 5, 1918, Serial No. 215,428. Divided and this application filed Apr. 27, 1921. Serial No. 464,849. 18 Claims. (Cl. 110—28.)

1. The process of burning pulverized coal in a combustion chamber having an outlet in an upper part thereof which consists in admitting the fuel in a downward direction adjacent a wall thereof, in substantially completing combustion within the chamber, and in drawing off the gaseous products of combustion through said outlet at such a rate as to produce stream line combustion of the fuel with a reverting U-shaped fuel and flame stream in which the descending portion is subjected to the heat of the ascending portion.

1,460,917. LABORATORY TABULATOR. CARMELO PENAFLO, Manila, P. I. Filed Sept. 21, 1921, Serial No. 502,138. 1 Claim. (Cl. 235—91.)

A tabulator including a casing, a spindle therein, co-operating registering disks journaled on said spindle, a ratchet wheel movable with one of said disks and located exteriorly of the casing, a depressible operating member, a link extending from said operating member and pivoted on said spindle, a pawl extending upwardly from said link and engaging said ratchet, a spring on said link engaging said pawl and urging it into relation with the ratchet wheel, a link extending from said operating member below and substantially parallel to the first link to which the second link is pivoted rising from the base of the casing below said ratchet wheel, said means having a recess, a return spring disposed in said recess and engaging the second mentioned link, a retaining pawl for said ratchet wheel relatively close to said means, a registering mechanism for totals operated by said spindles, a ratchet wheel on said spindle, and a pawl carried by the first mentioned ratchet wheel and cooperating with the second mentioned ratchet wheel.

1,460,918. PROCESS FOR MAKING WARP KNITTED FABRICS. EDWARD EVERARD PRESTON, Leicester, England. Filed Oct. 20, 1920. Serial No. 418,237. 4 Claims. (Cl. 66—33.)

3. A process for the production on double rib knitting machines of a uniformly faced fabric which consists in utilizing one row of thread guides only and of causing each individual thread to be laid alternatively over two needles of the front bar and then over two needles of the back bar at each course in such a manner that each thread is in part lapped by the thread next before and in part by the thread next behind so that each knitted loop contains two threads.

1,460,919. ANIMAL HOPPLE. JOHN W. PRIEST, Boise, Idaho. Filed Oct. 26, 1921. Serial No. 510,510. 1 Claim. (Cl. 119—128.)

A hopple consisting of a chain having a terminal hook, and a second hook having a running engagement with the chain and adapted to be locked at any desired point throughout the length thereof; the running hook being of looped construction with rearwardly convergent arms

bulged outwardly to form an opening through which the links of the chain may pass freely, the arms beyond the

bulged portions being arranged in parallelism to provide a seat for selected links and the extremities being inter-twisted to form a rigid handle.

1,460,920. SPRING WHEEL. EDOARDO RAMONDO, Turin, Italy. Filed Nov. 13, 1922. Serial No. 600,663. 5 Claims. (Cl. 152—28.)

1. A resilient wheel comprising a hub, a fixed abutment on the outer end thereof, an annular radially movable member surrounding the hub, supporting levers each having an enlarged end axially fulcrumed on the abutment and its other end mounted in and movable axially of the annular radially movable member, a universally movable member surrounding the hub and levers, and springs for holding the universally movable member in yielding contact with the enlarged ends of the levers.

1,460,921. AUTOMOBILE DIRECTION INDICATOR. ANTHONY SAJESKI, Nanticoke, Pa. Filed Jan. 31, 1923. Serial No. 616,142. 1 Claim. (Cl. 116—46.)

In an automobile direction indicator, an angle member including a horizontal and a vertical tubular section, integrally formed and angularly cut away at adjacent ends, a depending flange carried by the outer edge of the vertical tubular section, a shaft journaled in each section, the forward end of the horizontal shaft being journaled in the depending flange, gear connections between the adjacent ends of the shafts, an indicator arm secured to the upper end of the vertical shaft above the vertical tubular

section, a bracket for securing the member to the windshield frame of an automobile, a disk secured to the rear end of the horizontal tubular section, the horizontal shaft

extending rearwardly through said disk, a handle secured to the end thereof, and spaced stop devices for the handle carried by said disk.

1,460,922. VALVE-ACTUATING MEANS. FRANK A. SAUNDERS, Dubuque, Iowa. Filed Aug. 12, 1922. Serial No. 581,539. 4 Claims. (Cl. 74—33.)

2. Valve actuating means comprising a shank having an opening in one end thereof arranged to receive a portion of a valve, an extension projecting from said end and arranged to engage a portion of the valve handle, that portion of the shank adjacent the opening and remote from the extension being arranged to engage the valve handle.

1,460,923. READING APPLIANCE. ROBERT M. SEARLE, Rochester, N. Y. Filed June 30, 1921. Serial No. 481,633. 5 Claims. (Cl. 88—1.)

1. In combination with a field to be viewed, an elongated lens, a lamp, an elongated tubular casing for the lamp having one side extending to the lens so that no space is provided between the lens and the casing through which direct rays may pass to the eyes of the viewer of the field through the lens, said casing having an elongated opening permitting the rays to pass from the lamp on the field and in rear of the lens.

1,460,924. READING APPLIANCE. ROBERT M. SEARLE, Rochester, N. Y. Filed Nov. 16, 1921. Serial No. 515,733. 7 Claims. (Cl. 240—2.)

1. The combination with an indicator bar and a copy holder arranged above the bar, of arms extending outwardly at opposite ends of the indicator bar, a frame movable toward and from the indicator bar on said arms, two lenses carried by said frame, one associated with the indicator bar and the other associated with the lenses and means on the frame closing the space between the two lenses.

1,460,925. SUPPORTING MEANS FOR GAS-RETORT SPOUTS. ROBERT M. SEARLE, Rochester, N. Y. Filed Nov. 11, 1922. Serial No. 600,215. 3 Claims. (Cl. 48—126.)

1. The combination with a retort having a spout portion projecting from a furnace, bolts securing said spout portion in position on the furnace, and a closure for said projecting spout portion, of counter-balancing means for said projecting spout portion and closure.

1,460,926. COMPENSATOR FOR INDUCTION MOTORS. HARRY F. STRATTON, Cleveland Heights, Ohio, assignor to The Electric Controller & Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 26, 1922. Serial No. 577,701. 8 Claims. (Cl. 172—179.)

3. In a starting compensator for induction motors, an operating handle, a motor, starting contacts and running contacts therefor, means actuated by the handle for closing the starting contacts and for storing energy tending to close the running contacts, means restraining the energy-storing means, an electromagnet having its winding energized by the motor current, an armature for the

electromagnet biased to open position but prevented from opening when the motor current exceeds a predetermined

value, and means controlled by the armature when opening to release the restraining means, whereby the running contacts may close.

1,460,927. VACUUM CUP. RALPH S. THOMPSON and CARL F. DOSCHER, New York, N. Y. Filed Mar. 28, 1922. Serial No. 547,416. 5 Claims. (Cl. 128—300.)

1. A vacuum massage cup comprising a cup-shaped body of resilient material with an axial termination ending in a hand receiving head having an air duct leading axially therethrough, said cup having an expanding body cavity communicating with the duct, and a substantially one-piece diaphragm extending across the mouth of the head and having its outer face formed with an extended series of alternate ribs and grooves with air passages following the contour of the grooves, the diaphragm being relatively rigid and the head yieldable to pressure to compress it into the hollow body of the cup.

1,460,928. TUBULAR FRAME. CHARLES S. TILDEN, Cleveland, Ohio, assignor to The Elyria Iron & Steel Company, Cleveland, Ohio. Filed Mar. 22, 1922. Serial No. 545,843. 8 Claims. (Cl. 287—54.)

1. In a tubular frame, a reinforced joint for connecting two tube members, comprising a plug having a shank portion adapted to be inserted into the end of one of said tubes, said shank portion being provided with a recess in its outer surface adapted to have the metal of said tube

indented into it, said plug having an enlarged portion forming a shoulder surrounding said shank, said enlarged portion being hollowed out to adapt it to fit the external surface of the other of said tube members, a reinforcing member adapted to be inserted into said last named tube, said plug having a longitudinal aperture, said reinforcing member having a transverse aperture, and fastening means in said apertures adapted to draw said plug and said reinforcing member towards each other, said reinforcing member having an aperture adapted to receive a positioning rod.

1,460,929. COMBINED INFANT CRIB AND GOCART. JACOB A. VIERLING, Jersey City, N. J. Filed May 25, 1922. Serial No. 563,739. 9 Claims. (Cl. 280—31.)

1. A combined infant crib and go-cart comprising a body frame, and supporting legs hinged to the body frame in crossed relation when in go-cart formation and arranged perpendicularly when set up as a crib, said body frame including side rods and brace bars connected to the legs and slidable on the rods.

1,460,930. ROAD MAINTAINING AND RESURFACING MACHINE. ODIN B. WALTERS, Council Bluffs, Iowa. Filed Dec. 9, 1922. Serial No. 605,753. 6 Claims. (Cl. 37—155.)

1. In a road maintainer, a frame, a superstructure on the frame, manually operable means for transversely shifting the superstructure on the frame, means for angularly adjusting the superstructure across the frame, clamping means for binding the superstructure upon the frame when adjusted and a scraper suspended from the superstructure and adapted for adjustment transversely and angularly with the same.

1,460,931. COMBINED HOT AND COLD WATER VALVE. LEON B. YEISER and FREDERICK C. LEHMANN, Cleveland, Ohio. Filed July 21, 1919. Serial No. 312,205. 21 Claims. (Cl. 277—20.)

1. A pair of valves and a cover plate removably superposed thereover and depressible at either end and midway of its ends whereby either valve or both valves may be opened at the election of the operator.

1,460,932. COMBINATION LOCK. SAMUEL J. ZINGMAN, New York, N. Y. Filed June 17, 1922. Serial No. 568,954. 4 Claims. (Cl. 70—19.)

1. A combination lock comprising a telescopic shackle, a body carried by one section of the shackle and having a groove opening out through the face and one end thereof, a shank formed on the other section of the shackle, bits formed on said shank and extending beyond the face of the body, spaced pairs of disks rotatably mounted on the body and each having a plurality of slots to receive the bits, bands secured to the peripheries of the disks, and a second disk for each one of each pair of disks, said second disks mounted on the body between the first named pairs of disks and each having a slot adapted to be registered with any one of the slots of the first named disks.

1,460,933. APPARATUS FOR MOLDING PLASTIC SUBSTANCES. RICHARD HARTLEY SMITH ABBOTT and JAMES BROOKS CLOSE, London, England. Filed Jan. 16, 1922. Serial No. 529,736. 7 Claims. (Cl. 25—60.)

1. In apparatus for molding plastic substances, the combination of a plate having recesses or perforations

therein, a receptacle for the plastic substance and a reciprocating member adapted alternately to dip into the

receptacle and to deliver plastic substance therefrom into the perforations or recesses in the plate in the form of a cake or pellet.

1,460,934. GRINDING MACHINE. ULRICH ANDERSON, Wausau, Wis. Filed May 26, 1921. Serial No. 472,770. 10 Claims. (Cl. 51—245.)

1. In a grinding machine, the combination of a base; a column mounted for rotative adjustment thereon; a saddle mounted for vertical movement upon the column; a grinder supported in the saddle; a grinder supported by the head eccentrically to the axis of the head; means for adjusting said grinder to vary the eccentricity thereof; means for rotating the grinder about its own axis independently of the rotation of the head; and means for securing the column to the base whereby the column, and consequently the parts carried thereby, may be brought into different positions with reference to the base.

1,460,935. COMBINED RULER AND BLOTTER. ALBERTO AZCONA, Magdalena, Mexico. Filed Dec. 5, 1922. Serial No. 605,089. 5 Claims. (Cl. 120—2.)

5. As a new article of manufacture, a combined ruler and blotter consisting of an elongated core of circular formation constructed of blotting material and a plurality of telescopically associated elongated cylindrical sections of blotting material fitted over said core and adapted to be successively removed and discarded when filled with ink whereby to expose and present a clean blotting surface.

1,460,936. FENCEPOST ATTACHMENT. PERCY TRIPP BAILEY, Middletown, R. I. Original application filed Oct. 8, 1919, Serial No. 329,316. Divided and this application filed Oct. 4, 1921. Serial No. 505,365. 5 Claims. (Cl. 256—11.)

1. A fence post attachment comprising a pair of arms, adapted to grip a horizontally extended pipe, means for connecting the arms to a fence post, said arms being adjustable in respect to said means for varying the distance between said pipe and said post, said arms being provided with slots for locking one arm into the other.

1,460,937. TIMER BRUSH. JAMES F. BEAVAN, Binghamton, N. Y. Filed June 28, 1922. Serial No. 571,377. 4 Claims. (Cl. 171—323.)

2. A timer-brush including a sleeve, a socket, a brush slidable in the socket, the brush having a slot there-through, and a spring extending loosely through the slot and rigidly secured at the side of the sleeve for exerting tension upon the brush.

1,460,938. METHOD OF MIXING OR MASTICATING HEAVY PLASTIC MATERIAL. DAVID R. BOWEN and CARL F. SCHNUCK, Ansonia, Conn., assignors to Farrel Foundry and Machine Company, Ansonia, Conn., a Corporation of Connecticut. Original application filed Sept. 14, 1917, Serial No. 191,413. Divided and this application filed Mar. 20, 1918. Serial No. 223,537. Renewed Mar. 12, 1923. 19 Claims. (Cl. 18—50.)

1. The method of compounding rubber, which comprises placing the material to be compounded in a suitable chamber, and extruding the mass through a constricted opening a multiplicity of times before removing the same from the chamber.

1,460,939. GREASE RETAINER FOR JOURNAL BEARINGS. GEORGE A. BOYER, Los Angeles, Calif., assignor of one-half to Minta I. Heron and one-half to Norman C. Heron, both of Los Angeles, Calif. Filed Jan. 9, 1922. Serial No. 528,064. 3 Claims. (Cl. 64—22.)

1. In a grease retainer for journal bearings, a container adapted to be positioned upon a bearing, a fibrous ring within said container and adapted to encircle the shaft in the bearing, a coil spring encircling said fibrous ring, a leather disc within the container adjacent to the fibrous ring, a metal disc bearing against said leather disc and a ring of fibrous material between the edge of said metal disc and the bearing to which the container is applied.

1,460,940. AUTOMATIC REPLAY AND RECORD SHIFT FOR PHONOGRAPHS. EDGAR E. BROSIUS, Pittsburgh, Pa. Filed May 7, 1920. Serial No. 379,527. 39 Claims. (Cl. 274—10.)

1. In a phonograph, a record table, a reproducer cooperating therewith, a cam, a reproducer lifting arm

having a portion adapted to engage said cam and another portion adapted to engage the reproducer, means

normally urging said cam engaging portion into engagement with the cam, and means normally rendering said means ineffective, substantially as described.

- 1,460,941. KNOCKDOWN CONCRETE BUILDING. WALTER C. BROUGHTON, Kansas City, Mo. Filed June 20, 1921. Serial No. 478,901. 3 Claims. (Cl. 72—1.)

1. In a knockdown building of the character described, a wall structure consisting of columns spaced apart, removable panels closing the spaces between said columns, anchors projecting upwardly from the columns, and a removable bar uniting said anchors and resting on the top of the panels.

- 1,460,942. CASE. GEORGE BURROUGHS, Monessen, Pa. Filed Dec. 3, 1921. Serial No. 519,677. 2 Claims. (Cl. 206—38.)

1. A receptacle, a partition dividing the receptacle into a match receiving compartment and a cigarette re-

ceiving compartment, one wall of said receptacle having spaced openings, said openings communicating with said compartments, a rod arranged within the receptacle, a spring pressed member slidably mounted on said rod and designed to singly engage a match and a cigarette, and means for moving said member from one direction to eject a match and cigarette simultaneously through said opening.

- 1,460,943. ELECTRIC CUT-OUT. SAMUEL M. CARMEAN and JAMES H. CARMEAN, Kansas City, Mo. Filed Feb. 20, 1922. Serial No. 537,793. 4 Claims. (Cl. 219—42.)

1. An electric heater comprising a casing, a heating element therein, an air impeller for directing air over the heating element, and an electric circuit cut-out associated with an electric heater and movable in response to heat generated by the heater whereby the circuit will be broken when the impeller ceases to operate.

- 1,460,944. BODY FOR CHILDREN'S VEHICLES. DONALD A. CAMERON, Houghton, Mich. Filed May 12, 1922. Serial No. 560,309. 4 Claims. (Cl. 280—23.)

1. As a new article of manufacture, a children's carriage comprising a sled, a closed body simulating an automobile body carried by said sled and directly secured to the knees thereof, and a substantially flat hinged top on said body.

- 1,460,945. WINDOW DOG KENNEL. CLAIRE CHAPLIN, New York, N. Y. Filed Feb. 4, 1922. Serial No. 534,121. 3 Claims. (Cl. 119—17.)

1. A window kennel comprising a box structure having a flanged bottom to render the same water-tight, strips secured to said bottom extending upwardly to form a

foraminous wall for the box, a removable lid therefor, means to secure said lid in place adjacent the side walls of the box, a drain member at one end of said lid extend-

ing at an angle thereto and means at the ends of said drain member to clamp the same to the frame of a window.

1,460,946. ROLL-RETAINING DEVICE. ALFRED WILLIAM CHRIST, Chicago, Ill. Filed Dec. 16, 1920. Serial No. 431,193. 4 Claims. (Cl. 206—52.)

1. A member provided with a body portion, a resilient arm bent back toward and extending alongside a part of said body portion, and means upon said body portion for attaching said member to a wall of a case with said part engaging said wall, said member being adapted to prevent a roll from unrolling in said case by exerting pressure between said wall and roll, substantially as described.

1,460,947. BURNER FOR FURNACES. HENRY F. CLARK, Oakmont, Pa., assignor to Window Glass Machine Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Apr. 9, 1921. Serial No. 459,993. 11 Claims. (Cl. 158—7.)

1. A producer gas combustion apparatus for glass furnaces or the like, comprising a relatively large heating chamber, a mixing and combustion chamber communicating therewith, said last chamber gradually increasing in cross section towards said heating chamber, and air and producer gas feeding means communicating with said mixing chamber at a distance from said heating chamber, substantially as described.

1,460,948. AERIAL PROPELLING MACHINE. SALUSTIO VALDÉS CORTÉS, Valparaiso, Chile. Original application filed Oct. 15, 1918, Serial No. 258,170. Divided and this application filed Apr. 9, 1920. Serial No. 372,709. 10 Claims. (Cl. 244—16.)

1. In a propeller for aerial vehicles, the combination of a permeable casing having permeable sides and periphery, and movable deflecting vanes on its sides and periphery.

1,460,949. PAPER-REENFORCING MACHINE AND METHOD THEREOF. ANDREW E. CURRIER, Millis, Mass., assignor to Max Brown, Boston, Mass. Filed Aug. 31, 1920. Serial No. 407,163. 6 Claims. (Cl. 154—1.)

1. The herein described method which consists in winding filaments continuously upon spaced apart relatively stationary guides to constitute a criss-cross web, and drawing the web so formed constantly along said guides and off from the ends thereof, with a frictional sliding movement, and pressing the same upon a moving paper surface.

1,460,950. VANITY CASE. WILLIAM H. DENNEY, South Orange, N. J. Filed Dec. 6, 1922. Serial No. 605,238. 5 Claims. (Cl. 132—83.)

1. A container including a body having a bottom and a flange formed with a cutout portion, and a tray com-

prising a bottom and a flange, said tray hinged to the body to swing laterally, the flange of the tray forming a closure for the cutout portion of the body.

1,460,951. SIGNBOARD. BEN DUFFEE, Wichita, Kans. Filed June 30, 1922. Serial No. 571,881. 2 Claims. (Cl. 40—138.)

1. A sign of the character described comprising a rectangular frame including upper and lower and intermediate longitudinal bars connected at their ends by transverse bars and connected at their centers by another transverse bar, diagonal brace bars located at the junctures of said end and intermediate cross bars with the uppermost and lowermost longitudinal bars, truss rods connected with the lower end of the intermediate cross bar and with the transverse end bars and provided with turn buckles, and a shaft secured to the frame adjacent the uppermost intermediate longitudinal bar for mounting the sign structure upon supporting posts.

1,460,952. CONVEYER. SAMUEL L. EUSTIS, Jr., Onaga, Kans. Filed May 12, 1919. Serial No. 296,455. 1 Claim. (Cl. 198—199.)

A conveyer of the character described comprising a bottom wall arranged at an inclination and supported at its lower end, outwardly inclined side walls rising from said bottom wall and in contacting engagement with the side edges thereof, transversely disposed shafts journaled in the ends of the bottom wall, a sprocket carried by the ends of each shaft, chains trained over the sprockets, substantially L-shaped carriers secured to the chains and being disposed transversely thereof, a plurality of spaced parallel longitudinally disposed rods bent downwardly at their ends to conform to the curvature of the turning point of said chains and being secured to and spaced from the bottom wall as and for the purpose specified.

1,460,953. CONTROLLING DEVICE FOR ELECTRIC SIGNS. CARL A. FAIRBANKS, Wichita, Kans. Filed Mar. 27, 1922. Serial No. 547,315. 5 Claims. (Cl. 35—16.)

1. In a device of the class described, a cam shaft, a cam rigid thereon, an element representing a portion of the human anatomy subject to displacement, a chart with

which said element is associated, means for mounting said element to permit of movement for attracting at-

tention, the chart having a cut away portion through which the element specified is visible, and means for actuating said element from the cam.

1,460,954. EDUCATIONAL SIGN. CARL A. FAIRBANKS, Wichita, Kans. Filed Oct. 30, 1922. Serial No. 597,948. 3 Claims. (Cl. 40—34.)

1. In a device for the purpose set forth, a casing, a motor operated shaft therein, comprising sections, reducing means whereby one of said sections is turned at a less rate of speed than the other, disks journaled in the casing to the rear of the openings, means actuated by the motor shaft for imparting an intermittent rotary movement to one of the disks, means between the disks whereby the same are simultaneously rotated so that the views thereof are successively brought opposite the openings, means for momentarily halting the disks when the views thereon are in such position, and means for illuminating the disks when in such position.

1,460,955. MACHINE FOR TREATING WICKS. FREDRICK W. FISCHER, Milwaukee, Wis. Filed Mar. 25, 1921. Serial No. 455,592. 35 Claims. (Cl. 91—14.)

2. In a wick treating machine, the combination of a movable table, wick-supporting arbors carried thereby, means for spraying wicks while on said arbors, and a rotary knife for trimming wicks on said arbors.

11. In a wick treating machine, the combination with a wick-carrying table, of means for spraying wicks on said table with a liquid solution, and pressure means for forcing the solution into the wicks.

33. In a wick treating machine, a table, wick carrying arbors thereon, a roller for engaging wicks on said arbors at predetermined times to rotate the wicks, means for rotating said roller, spraying means for spraying wicks during rotation by said roller.

34. In a wick treating machine, a movable carrying table, means for moving the table, means for applying a

stiffening agent to a portion of wicks carried by said table, means for operating said stiffening agent applying means,

pressure means for forcing said stiffening agent into the wicks, and means for drying said stiffening agent.

1,460,956. SMOKE CONSUMER. FREDERICK P. FISCHER, Chicago, Ill. Filed May 13, 1921. Serial No. 469,151. 3 Claims. (Cl. 110—49.)

1. In combination with a boiler provided with a grate and chamber beneath said grate and with a smoke pipe connecting said boiler with a nearby smoke stack, a conduit extending along the front and the top of said boiler and connecting the front end of said chamber with said smoke pipe, an air inlet duct connected with the said conduit, adjacent said smoke pipe, means interposed in said conduit for forcing carbon and gas from said pipe and air from said duct through the grate, and a single valve to regulate the proportionate amount of carbon and of air to be admitted to said chamber.

1,460,957. ANATOMICAL SUPPORT. WALDEMAR W. FROESCHLE, St. Louis, Mo., assignor to Charles J. Gregory, St. Louis, Mo. Filed Aug. 15, 1921. Serial No. 492,372. 6 Claims. (Cl. 36—71.)

1. In an anatomical support of the class described, a body, opposed shallow pockets therein, and a removable

insert provided with tapering edges inserted in said pockets and a relatively thick supporting portion extending substantially entirely beyond said pockets.

1,460,958. GEAR. FRANZ GAHLERT, Jr., Welpert, Bohemia. Filed July 8, 1922. Serial No. 573,679. 5 Claims. (Cl. 74—34.)

1. A motion changing gear comprising a common driven shaft, a plurality of differential gears mounted on the said common shaft; each said differential gear comprising a differential wheel, a planet wheel mouthed upon the said differential wheel and sun wheels at either side of the differential wheel; a driving wheel associated with each differential wheel; each said planet wheel being in engagement with sun wheels associated with adjacent differential wheels; and means for throwing any number of said driving wheels into gear with their respective differential wheels, whereby the motion of the said driving wheels may be transmitted to the said common driven shaft through one or more of said differential gears in accordance with a geometrical series, and means for locking the sun wheels successively against rotation in the order of their arrangement on their shaft.

1,460,959. UNDERWEAR. ROBERT E. GARRETT, Nashville, Tenn. Filed Apr. 6, 1922. Serial No. 550,105. 2 Claims. (Cl. 2—144.)

2. A garment of the character described, having its leg portions extended below the knee at the front portion and cut away toward the rear portion to cover and protect the knee and prevent creeping up of the leg portions upon bending of the knees, a binding strip around the extended and cut away portions, to provide a stiffening and reinforcing for said end cut away extended portions, and hose supporting means depending from said binding strip, at the extended portion to retain the extension below the knee and also support the stocking, said hose supporting means consisting of a pair of hose supporting members for each leg section connected to the binding strip at its lower portion.

1,460,960. AIR SEPARATOR. WILLIAM A. GIBSON and CHARLES E. NEEDHAM, Allentown, Pa., assignors to Bradley Pulverizer Company, Boston, Mass., a Corporation of Maine. Filed Nov. 16, 1921. Serial No. 515,511. 14 Claims. (Cl. 83—40.)

3. An air separator comprising a closed outer casing having a delivery hopper for the finished material, an

inner casing spaced apart therefrom providing an inner separating chamber, distributing means for projecting the material to be separated centrifugally in the upper portion of said separating chamber, means for delivering the tailings from said separating chamber, a hollow member centrally located within said separating chamber hav-

ing apertured walls, and means for causing a current of air to pass continuously downwardly through the passage between said outer and inner casings and upwardly through said apertures in the wall of said hollow member into and through said separating chamber thereby producing a plurality of radially outward and upward currents in said separating chamber.

1,460,961. CURRENT CUT-OUT. CLARENCE F. GILCHRIST, Toledo, Ohio, assignor to the Electric Auto-Lite Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 24, 1918. Serial No. 213,526. 7 Claims. (Cl. 200—87.)

3. In an electro-magnetic cut-out, the combination of a core; a plurality of solenoids surrounding said core, comprising a series coil and a shunt coil; a U-shaped iron strip positioned about said solenoids; a contact plate on one arm of said strip, insulated therefrom, and in series with the series coil; an armature carrying a second contact plate secured to the other arm of said strip; means for normally holding the contact plates in disengagement; said shunt coil when energized being adapted to close an electrical circuit through the contacts, armature, and one arm of the U-shaped strip, and to close a magnetic circuit through the armature and each arm of the U-shaped strip, the reluctances of said magnetic circuits being approximately equal when the contacts are closed and the reluctance of the magnetic circuit thru the arm carrying the contact plate being greater than the reluctance of the magnetic circuit thru the other arm when the contacts are open.

1,460,962. AXLE. SETH M. HALL, Portland, Oreg. Filed May 13, 1922. Serial No. 560,754. 1 Claim. (Cl. 295—37.)

In a vehicle, an axle therefor, a flange formed integral with the axle adjacent one end, a spaced enlargement formed on the axle adjacent each end on one side of the

flange, a sleeve rotatably mounted on the enlargements and abutting the flange, a flange formed on the sleeve adjacent its abutting end, a wheel carried by the sleeve between said flanges and adapted to rotate with the sleeve, a flange formed on the extreme opposite end of the sleeve which terminates on the adjacent enlargement, a wheel placed on the axle abutting the last mentioned

enlargement and spaced from the end of the sleeve, a hub surrounding the enlargement and being arranged in the space between the wheel and the end of the sleeve for taking up the thrust therebetween, a gear carried by the last mentioned flange, a gear carried by the last mentioned wheel, and pinions meshing with the gears and fixed to the hub as and for the purpose specified.

1,460,963. ADJUSTABLE SHOE-TREE. JOHN S. HANSEN, Brockton, Mass. Filed Apr. 11, 1922. Serial No. 551,497. 1 Claim. (Cl. 12—128.1.)

A shoe tree of the kind described, having a forepart, a heel part, a member pivotally secured to one part, a second member rigidly secured to the other part, one of said members having a slot therein with a plurality of recesses to receive the other part, means permitting adjustment of said parts for pivotal connection on any one of said recesses, and a movable handle adapted to traverse said slot and hold the members in adjusted position, in combination with yielding means to hold said handle in the position to which it is moved.

1,460,964. FUEL-SAVING DEVICE. JEAN HYVERT, St-Denis, Seine, France. Filed Mar. 24, 1923. Serial No. 627,415. 1 Claim. (Cl. 123—25.)

A fuel economizer for internal combustion engines for use in combination with the exhaust pipe of an engine, comprising, a chamber, a portion of exhaust pipe entering the chamber, a portion of exhaust pipe leaving the

chamber, a bundle of tubes, positioned in the chamber, and communicating the said exhaust pipe portions, and means for introducing a liquid into the chamber and onto the tubes, said bundles of tubes having an aggregate cross sectional flow area at least equal to that of one exhaust pipe portion, said means comprising a conduit positioned in the chamber and above said bundle of tubes, and a series of apertures in the conduit, extending the entire length of the bundle of tubes, whereby to spray fluid onto the tubes.

1,460,965. APPARATUS FOR AUTOMATICALLY CONTROLLING THE HEADLIGHTS OF AUTOMOBILES. JOHN L. ILES and JOHN T. ILES, Magnolia Springs, Ala. Filed Sept. 27, 1922. Serial No. 590,843. 1 Claim. (Cl. 240—62.)

A head lamp having a post, a bracket frame carried by the vehicle having upper and lower arms, said upper arm having a divided bearing engaging about the post, spring means to urge the bearing sections together upon the post, a flat spring embedded in one of the bearings and engaging said post, a cone bearing carried by the post and seating upon the lower arm, an adjustable spring for drawing the bearing means against said seat, a curved flat spring engaging tightly about the lower end of said steering post and having its other end affixed to the steering cross-rod, substantially as described.

1,460,966. GAME DEVICE. FRANKLIN JOHNSON, New York, N. Y. Filed Mar. 11, 1922. Serial No. 543,021. 7 Claims. (Cl. 46—25.)

1. A game device comprising a set of trader record cards, a broker record card, a set of designating cards, and a deck of play cards, the designating cards and the play cards having indicia in common, as and for the purpose specified.

1,460,967. VANITY CASE. WILLIAM G. KENDALL, Newark, N. J., assignor to Henri Rigaud, doing business as Parfumerie Rigaud, New York, N. Y. Filed Jan. 22, 1923. Serial No. 614,231. 5 Claims. (Cl. 132—83.)

1. A vanity case comprising a main receptacle, a vertically swinging cover hinged thereto, and a laterally swinging auxiliary receptacle hinged thereto, said cover and laterally swinging auxiliary receptacle being secured to the main receptacle by a single hinge member.

1,460,968. FLUSH-TANK VALVE. STEPHAN KNEPPEL, Scranton, Pa. Filed May 17, 1922. Serial No. 561,682. 3 Claims. (Cl. 4—5.)

1. A flush tank valve including a disk adapted to seat on a flush pipe, a cap plate on said disk, a stem above the cap plate, an element on the stem and having an enlarged lower portion, said cap plate having a hole receiving said element and undercut to accommodate said enlarged lower portion of the element, said element being permitted play relatively to the valve and cap plate so that the latter may rock relatively to the disk to seat itself on the flush pipe, a disk at the under side of the first-mentioned disk and having a depending frame adapted to enter the flush pipe, and fastener screws extending through said cap plate and the first-mentioned disk, the second-mentioned disk having threaded sockets receiving said screws so that the disks and cap plate are drawn in close relation.

1,460,969. TERMINAL FOR DRY BATTERIES. HARRY M. KORETZKY, New York, N. Y. Filed June 30, 1920. Serial No. 392,926. 2 Claims. (Cl. 204—38.)

2. A battery, including a central electrode, a terminal adapted to be secured to said central electrode, said terminal including a screw threaded shank adapted to have its lower portion embedded within said electrode, and being formed adjacent its point of contact to the

upper surface thereof with recessed portions, said electrode being formed with notches adjacent its point of contact with said shank, said notches aligning with the

raised portions, and being adapted to receive an anchoring element whereby to prevent any movement of the shank with respect to the electrode.

1,460,970. HOG-RINGING DEVICE. WILLIAM W. LAMSON, Collins, Nebr. Filed June 26, 1922. Serial No. 571,013. 1 Claim. (Cl. 128—332.)

In a hog ringing device the combination of pivotal jaws, one of which is slightly longer than the other, handles depending from the jaws; one of said jaws having a depressed surface of similar construction throughout and having a channel in the direct longitudinal center thereof, and the other of the jaws having a depressed surface similar to the depressed surface of the first jaw but terminating at a point further away from the free end of the jaw, a circular depression formed in the second jaw with its median line on a plane with the end of the first depression of the second jaw and a channel extending from a point beyond the lower portion of the first depression of the second jaw and at an angle of approximately 45 degrees and terminating slightly below the direct center of the circular depression; substantially as and for the purpose specified.

1,460,971. FILM-SPOOL SUPPORT. LOUIS LISSON, Syracuse, N. Y. Filed Sept. 13, 1922. Serial No. 587,996. 7 Claims. (Cl. 242—71.)

1. The combination with the side rails of a camera having aligning facing sockets and a film spool operable in a pocket lying between said sockets, of a reciprocable

spindle carried by each rail, springs carried by said rails adapted to move said spindles toward each other for supporting said film spool, and cam members car-

ried by said rails adapted when rotated in one direction to move said spindles away from each other for releasing said film spool.

1,460,972. PIPE ATTACHMENT FOR STEAM LOOMS. OWEN F. MCENANEY, Brooklyn, N. Y. Filed May 17, 1922. Serial No. 561,777. 4 Claims. (Cl. 28—59.)

1. In an attachment for looms, a thread moistening device consisting of a cylindrical shell, an inlet opening into said shell for the admission of steam, an inner cylindrical shell, said shell having openings in its wall, thread-guiding elements secured to the ends of said shell, and a drain spout opening out of the outer shell.

1,460,973. CAR REPLACER. FREDERICK D. MCGINLEY, Pleasant Beach, N. Y., assignor of one-half to Lucius L. Lacey, Syracuse, N. Y. Filed Aug. 31, 1922. Serial No. 585,383. 11 Claims. (Cl. 104—269.)

1. A car replacer comprising a base plate having a central lengthwise flange and opposite side flanges in spaced relation thereto, the central flange being of greater height than the side flanges, and a leader plate pivotally mounted upon the base plate, to move laterally, and provided with guide flanges movable into and out of registration with those on the base plate.

1,460,974. COUPLER FOR RAILWAY AND LIKE VEHICLES. FREDERIC A. MACKINNON and JOHN HAMPSON, London, England. Filed June 24, 1921. Serial No. 480,045. 5 Claims. (Cl. 213—80.)

1. In an automatic coupling for railway and like vehicles, the combination with the draw hook and a pivoted shackle of a pivoted member provided with a lower hook adapted to engage a shackle of an adjacent vehicle when said last mentioned shackle is in engagement with said draw hook, and with an upper hook, adapted to engage the shackle of an adjacent vehicle.

1,460,975. COOKING UTENSIL. WILLIAM P. MILLER, Brooklyn, and NICHOLAS J. KARAYANIS, New York, N. Y. Filed Sept. 16, 1922. Serial No. 588,611. 3 Claims. (Cl. 53—2.)

1. A cooking utensil, comprising an outer imperforate pot member, a separate supporting band member having its upper portion larger than the wall of the outer pot member for allowing the pot member to be removably nested in the band member, and having its lower end portion reduced for insertion in the outer pot member as well as providing an annular shoulder whereby the band member may be removably supported on the edge of the wall of the outer pot member, and an inner pot member having at its upper end an annular shoulder larger than the band member and larger than the outer pot member, the portion of the inner pot member below its shoulder being reduced as well as being tapered and the tapered portion with the bottom of the inner pot member also being fluted with spaced perforations in the outer side wall parts of each flute.

1,460,976. APPARATUS FOR CLEANING AIR. GEORGE H. NOBBS, Watertown, Mass. Filed Jan. 18, 1921. Serial No. 438,223. 8 Claims. (Cl. 183—21.)

8. In combination, means for establishing a current

of air to be cleaned, a rigid wall having a felt surface holding oil non-evaporative at the normal temperature

of use, said wall being set for said current to impinge thereon and being adapted to deflect said current.

1,460,977. TEAT CUP. CLYDE ODEN and HENRY R. MOORE, Syracuse, N. Y., assignors to Nu-Way Milker Company, Syracuse, N. Y., a Corporation of New York. Filed Feb. 25, 1920. Serial No. 361,116. 7 Claims. (Cl. 31—102.)

1. In a teat cup a tubular mouth piece having a pair of circumferential channels in its periphery.

1,460,978. MUSIC-ROLL CONTAINER. BERNARD V. O'NEILL, New York, N. Y. Filed Jan. 15, 1921. Serial No. 437,501. 6 Claims. (Cl. 84—161.)

1. A container for player piano music rolls to afford means to permit of the playing and rewinding of the roll without removing the same from the container, comprising a weighted means carried by the container for balancing the same on the roll while said roll is rotating.

1,460,979. MEANS FOR HEATING THE CONTENTS OF VENDING MACHINES. CHARLES L. PAINE, Indianapolis, Ind. Filed Mar. 30, 1921. Serial No. 456,889. 12 Claims. (Cl. 34—21.)

1. A vending machine for peanuts and the like comprising a heat-generating device encased in a protecting element and positioned in contact with the contents of the machine, whereby such contents may be maintained in heated condition without scorching.

1,460,980. GAS GOVERNOR FOR TYPESETTING MACHINES. HOWARD W. PARTLOW, Utica, N. Y. Filed Jan. 15, 1920. Serial No. 351,711. 16 Claims. (Cl. 236—33.)

12. A thermostatic governor comprising a heater-controlling member, a heat-expansible member, a lever for operating the first member, and a pair of levers interposed between the first lever and the expansible member and each directly engaging the same and cooperatively forming the sole support therefor.

1,460,981. AUTOMATIC RAILROAD SWITCH. THOMAS M. PRIM, Ontario, Calif. Filed Sept. 26, 1922. Serial No. 590,691. 10 Claims. (Cl. 246—320.)

3. A switch of the character described, comprising a switch body pivoted at one end, a pair of rails carried by said body, and an arm rigidly secured to and extending forwardly from the pivoted end of said body to be operated by the wheels of rolling stock for shifting said body carrying the said switch rails.

312 O. G.—12

1,460,982. DOMESTIC WATER-SERVICE SYSTEM. CHESTER E. RECORDS, Anderson, Ind. Filed Mar. 31, 1922. Serial No. 548,449. 5 Claims. (Cl. 103—7.)

1. A pump for pressure systems, including a casing, an impeller therein having independent blades, each of said blades being interiorly formed to provide a water channel and an air channel, these channels delivering into a main channel at the end of the blade, the impeller having a hub spaced from the casing at one end to provide an air pocket with which the air channels communicate, means open only to inward flow for admitting air to said air pocket, the opposite end of the hub having an annular space in communication with a water supply, said annular space being in open communication with the water channels of the blades, the casing having a fluid-pressure outlet channel in substantially direct open communication with the main channels of the blades, and means for operating the impeller.

1,460,983. SPARK PLUG. JOHN C. ROWAN, South Atlanta, Ga., assignor of one-half to Willis Dobbs, Atlanta, Ga. Filed Sept. 26, 1921. Serial No. 503,226. 1 Claim. (Cl. 123—169.)

A spark plug comprising a shell, an insulating bushing arranged therein, a plurality of ground electrodes depending and converging from said shell, a main electrode passed through said bushing and including a plurality of spaced sections, said sections being arranged end to end and slightly spaced apart to provide a plurality of gaps in the length of the electrode, the upper section being screw threaded its entire length, an interiorly threaded bushing carried by the upper end of the insulating bushing and the threads of which being adapted to engage the threads of the upper section, the lower section being the longest and adapted to pass through the greater portion of said bushing and having its lower end in near contacting engagement with the free ends of the first mentioned electrodes, the intermediate sec-

tion being screw threaded its entire length, a second interiorly threaded bushing carried by the insulating bushing adjacent the first mentioned interiorly threaded bushing and adapted to have its screw threads engage the screw threads of the intermediate section, a kerf provided on the upper end of the intermediate section and adapted to facilitate the rotation thereof, a kerfed nut surrounding the kerfed end of the intermediate section and adapted to lock said intermediate section in a predetermined position, said insulating bushing being provided with passages aligned with the gaps of the main electrode and a transparent member surrounding said insulating bushing and adapted to cover said passages as and for the purpose specified.

1,460,984. INDICATOR FOR CAR SEATS. NICHOLAS J. RYAN, Tuckahoe, N. Y. Filed Aug. 25, 1922. Serial No. 584,299. 4 Claims. (Cl. 40—86.)

1. An indicator for car seats including a casing, a display web, said casing having a window for the viewing of said web, and having a second window, winding means for the web including a pinion, a pawl engageable with said pinion, a legend bearing slide movable to or from said second window, latch means to hold said slide at the window, a spring tending to move the slide away from the second window, a turnable key-operated element, and means on said element to release said pawl and said latch means.

1,460,985. FURNACE. LAUNCELOT EUSTACE SMITH, South Shields, Cornelis Zulver, London, and HERBERT ALEXANDER THOMPSON, North Shields, England. Filed Aug. 14, 1922. Serial No. 581,818. 3 Claims. (Cl. 110—22.)

1. A natural draft furnace front adapted for conversion to the use of either solid or liquid fuel comprising the combination of a front plate closing the furnace front except for an opening to the ash pit and having a firing opening of the ordinary four sided form cut into said plate, an inwardly converging baffling cone fitting directly into said firing opening in said plate, an external air heating casing fitted against the plate and about said firing opening in the plate, said air heating casing enclosing a chamber which covers the furnace front and said firing opening and baffling cone and which is open to the cone all around its circumference whereby there is a free air inlet space to the cone all around, and an oil burner extending through the said air chamber and having an inwardly flaring cone located within said baffling cone.

1,460,986. PLUMBING CONNECTION. MICHAEL J. SMITH, Morristown, N. J. Filed Mar. 31, 1921. Serial No. 457,311. 1 Claim. (Cl. 285—204.)

As an article of manufacture for use in combination with a closet bowl having a neck and a soil pipe spaced therefrom at a variable but determinate distance both vertically and laterally, an elbow connection between the bowl and the soil pipe, said elbow connection comprising a rigid metal member having its respective ends externally screw threaded from the ends for a considerable distance to adapt the effective lengths of the ends in practice according to the vertical and lateral distances aforesaid, a flange threaded upon the upper end of the elbow and serving as a vertical support therefor, and a combined flange and abutment threaded upon the other threaded end of the elbow, said flange and abutment members being freely movable along their respective threaded parts according to the specific distances desired in any individual job and the surplus threaded ends being removable from the elbow.

1,460,987. VEHICLE SPRING. WILL ELY STANFORD, Calexico, Calif. Filed May 4, 1922. Serial No. 558,456. 9 Claims. (Cl. 267—47.)

4. A spring assemblage including top and bottom bars, upper and lower series of spring leaves divergent toward their ends bearing respectively against said top and bottom bars, an intermediate series of spring leaves, means to amount the bottom bar on an axle, and means to support vehicle frame parts subject to the tension of said leaves; together with means connecting said bottom bar with a leaf of the intermediate series.

1,460,988. PUMP. DEAN HARPER THOMPSON, Lodi, Calif. Filed Apr. 4, 1921. Serial No. 458,270. 6 Claims. (Cl. 103—123.)

1. In a pump, a housing having a shaft rotatably mounted therein, two wheels having inwardly facing chambers of semi-circular contour and sloping radial

sides keyed to said shaft so that their inner surfaces are parallel, and a partition supported in said housing extending between said two wheels, said partition being

longitudinally divided into sheets movable independently of each other, and an inlet and a discharge arranged on opposite sides of said partition.

1,460,989. LEVEL ATTACHMENT. LEVERETT W. TINFANY, Winsted, Conn. Filed Nov. 8, 1921. Serial No. 513,674. 3 Claims. (Cl. 33—207.)

1. A level attachment including in combination with the body of a level formed with a cutout portion adjacent its lower outer edge, of a U-shaped plate secured to said body, the base of said plate being spaced from the end portion of said body, a slide movably interposed between said plate and body, there being enlarged portions forming a part of the upper edge of said slide and being adapted to extend into a slot formed in the upper edge of said plate, an upturned portion forming a part of the lower end of said slide, said upturned portion being adapted to extend into the cutout portion of said body, a screw threaded bolt secured to said plate, and extending through a slot formed in said slide, and a nut carried by said bolt at a point beyond said plate.

1,460,990. JACQUARD MECHANISM FOR CIRCULAR-KNITTING MACHINES. LOUIS TOTH, COLOMAN KONYES, and FRANK STRIEFFLER, Philadelphia, Pa. Filed May 5, 1922. Serial No. 558,588. 4 Claims. (Cl. 66—21.)

1. The combination in a circular knitting machine, of a base, a rotary table, a circular series of vertically-

movable needles carried by the table, a group of needle-raising levers carried by the base, pins connected to and pendent from the outer arms of the levers, a hexagonal roller with sockets in its sides disposed under the pins, a pattern with sets of apertures on the roller, gravitational means carrying said roller, means to turn the roller through a part of a revolution on downward movement of the gravitational means, means controlled by the rotary table to raise and release said gravitational means, and means controlled by the rotary table to depress the pins, the latter means including resilient connections, one to each pin.

1,460,991. SLIDING-DOOR FASTENER. HOWARD M. VAN ALSTYNE, Rensselaer, N. Y. Filed Aug. 2, 1922. Serial No. 579,296. 4 Claims. (Cl. 292—36.)

3. A door construction which includes a slidable door having an end portion, a reinforcing member fastened to said end portion and extending along its length, door stopping means fastened to the body of the car adjacent the ends of the door, and a strap on the end of the reinforcing member to engage with the stop member, the engagement of the strap and stop members locking the door in all but one possible direction of movement.

1,460,992. ORNAMENTAL LAMP STAND. CHRISTIAN VEHLING, Indianapolis, Ind. Filed Mar. 28, 1922. Serial No. 547,498. 3 Claims. (Cl. 240—81.)

1. In an ornamental lamp stand, a cylindrical base of uniform diameter throughout its length and having a solid integral lower end and open at its upper end, a cap fitting over the open end of said base, clips within said base, bolts for removably securing said clips to said cap

and base, a plurality of strips exteriorly of said base and extending from end to end thereof, a portion of the lower ends of said strips extending parallel with said base and the remainder of the strips above said parallel portions being outwardly bowed, means for ornamenting said strips, and bulb supporting sockets above said base.

- 1,460,993. GARMENT POCKET. GEORGE W. WALKER, Oakland, Calif. Filed June 26, 1922. Serial No. 570,778. 1 Claim. (Cl. 2—15.)

A pocket for garments including front and back portions stitched together along the side edges of the portions, the ends of the portions being turned inwardly at the opening into the pocket and providing flaps extending downwardly into the pocket, the side edges of the flaps being stitched to the front and back portions of the pocket by the said stitches along the side edges of said front and back portions, substantially as and for the purpose described.

- 1,460,994. FISHING REEL. JOHN T. WELCH, Dowagiac, Mich., assignor to James Heddon's Sons, Dowagiac, Mich., a Corporation of Michigan. Filed May 23, 1921. Serial No. 471,813. 7 Claims. (Cl. 242—84.4.)

6. In a fishing reel, the combination of a spool shaft, a traversing shaft, a steady bar, and a carriage having spaced openings through which pass, respectively, the traversing shaft and steady bar, to provide a mounting for the carriage, there being a third opening within the carriage connecting the other two, and means within said third opening engaging both with the steady bar and with the traversing shaft to provide a driving connection from the latter to the carriage, substantially as described.

- 1,460,995. TOOTHBRUSH HOLDER. WALTER W. WELPEL, Detroit, Mich., assignor of one-half to Grant L. Cook, Detroit, Mich. Filed Feb. 9, 1922. Serial No. 535,286. 4 Claims. (Cl. 248—63.)

1. In a tooth brush holder wherein a brush is inserted in a bottom open end of the holder, a back piece bent

to provide a shelf and cut and stamped to provide out-struck resilient members, and tubular containers having open ends and adapted to be placed on said resilient members with the upper ends of said containers closed by the shelf of said back piece, said resilient members adapted to hold brushes in said containers against front walls thereof.

- 1,460,996. FLUSHING VALVE. WILLIAM SEARS WHITE, Denver, Colo. Filed May 3, 1921. Serial No. 466,565. 10 Claims. (Cl. 137—93.)

1. A flushing valve including a reservoir having an inlet and an outlet, a piston in the reservoir above the inlet, a valve pendent from the piston and movable relatively thereto and adapted to close said outlet, said valve having a passage therethrough, and an auxiliary valve carried by the piston and adapted to close said passage by a movement of the piston toward the first-named valve.

- 1,460,997. MECHANICAL STOKER. WILFRED ROTHERY Wood, London, England. Filed Jan. 6, 1921. Serial No. 435,484. 7 Claims. (Cl. 110—40.)

1. An endless traveling grate stoker comprising an upper run, a stage at the rear of the upper run from which the clinker and ashes are discharged, a lower run and a water trough the surface of the water in which is freely exposed to radiation from the said upper run while a portion of the said lower run travels beneath the surface of the water.

- 1,460,998. PIN CLASP. JOSEPH ZANGRILLI, New York, N. Y. Filed Mar. 22, 1923. Serial No. 626,973. 4 Claims. (Cl. 24—87.)

1. In a pin-clasp of the kind described including a main central structure and a pair of relatively movable pins

carried by the main structure and having oppositely directed points offset from the main structure and normally spring-urged toward each other, the combination of means for thus spring-urging such pins while maintaining one of the pins slidable on the main structure, said means including a member slidably mounted on the main structure, said member including a length of strip metal of a uniform rectangular cross-section substantially from end to end, said member at one end being split to provide oppositely bent tongues, and an expansile coil spring on the member and restrained between said tongues and a part of the main structure.

1,460,999. TANK. ARTHUR WILLMAN COOPER, Santa Monica, Calif. Filed Dec. 13, 1921. Serial No. 522,099. 2 Claims. (Cl. 220—85.)

1. An oil tank including an open ended casing adapted to be partially submerged in water, means surrounding and engaging the casing to prevent lateral displacement thereof, and a floating cover positioned in one end of said casing.

1,461,000. METHOD OF MAKING INNER TUBES. ERNEST L. FULLER, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 16, 1920. Serial No. 403,685. 7 Claims. (Cl. 154—14.)

6. The method of making inner tubes that comprises disposing a valve patch upon a sheet of uncured rubber, disposing a metallic-cutting-element in an opening of the valve patch, rolling the sheet to form a tube, wrapping the tube with a fibrous strip to compact it and effect a cutting thereof by the metallic-cutting-element, subjecting the tube to heat to vulcanize the rubber, and removing the metallic-cutting-element from the cured rubber.

1,461,001. MOTOR AND MEANS FOR CONTROLLING THE SAME. EDWARD VASSALLO HARTFORD, Deal, N. J.; Henrietta Pollitzer Hartford administratrix of said Edward V. Hartford, deceased. Filed July 24, 1918. Serial No. 246,427. 15 Claims. (Cl. 171—222.)

1. The combination with a series electric motor and means operated thereby for intermittently supplying

energy to said motor, said means comprising a cam element and contacts operated thereby of means for varying

the period of energization, and a speed-responsive means controlling the last mentioned means whereby constant speed at varying loads is maintained.

1,461,002. RULING MACHINE. WILLIAM H. HOPE, Providence, R. I. Filed July 15, 1921. Serial No. 485,124. 19 Claims. (Cl. 33—32.)

1. A ruling machine comprising a bed having end up-rights, a shaft journaled on the uprights above the bed, a second shaft journaled on one upright, a slide bar secured to the second shaft, a crank pin adjustable on the slide bar, a rocker arm fixed to the first shaft, a connecting rod between the rocker arm and the crank pin, a work carriage, a cutter carriage, a bridge supporting the latter over the work carriage for movement, a second rocker arm fixed to the first shaft and engaging the cutter carriage for effecting movement thereof, and a cutter carried by the second carriage.

1,461,003. POLISHING MOP. FRANK J. LEARMAN, Buffalo, N. Y., assignor to Buffalo Specialty Company, Buffalo, N. Y., a Corporation of New York. Filed May 8, 1920. Serial No. 379,853. 8 Claims. (Cl. 15—229.)

1. The combination of a handle having a longitudinal slot therein, a mop head having a transverse pivot-portion extending through the slot of said handle, and clamping means on said handle between the end thereof and said pivot portion whereby said pivot-portion is clamped within said handle yet permitted to rotate therein.

1,461,004. HACK-SAW MACHINE OF THE CONTINUOUS-BAND TYPE. CHARLES NAPIER, Springfield, Mass., assignor to the Henry G. Thompson & Son Company, New Haven, Conn., a Corporation of Connecticut. Filed Dec. 20, 1920. Serial No. 431,812. 4 Claims. (Cl. 29—68.)

1. A metal sawing machine comprising work clamping means, and relatively movable band saw supporting means having a driving pulley and a guiding pulley, a continuous band saw mounted upon and operated by said pulleys with its leads located upon opposite sides of a plane passing through the axes of said pulleys, said blade being twisted when applied to said pulleys to cause the cutting field of the progressively moving blade to extend normally in a plane substantially perpendicular to a plane tangential to the face of one of said pulleys, and guiding means engaging the cutting lead of said blade adjacent to the ends of the cutting field thereof acting to maintain and insure said perpendicular position of the cutting portion of the blade throughout the entire cutting field.

1,461,005. MICROMETER CALIPER. JOHN W. PARKER, Barrington, R. I., assignor to Brown & Sharpe Manufacturing Company, Providence, R. I. Filed Mar. 15, 1922. Serial No. 543,981. 8 Claims. (Cl. 33—164.)

1. In a micrometer caliper having a threaded spindle and a barrel having interior threads, a sleeve interiorly threaded to engage the threads of the spindle and having exterior threads on each end; the exterior threads on the inner end of the sleeve engaging the threads of the barrel, a collar rigid on the sleeve between its ends to rotate the sleeve, a lock nut on the threads on the inner end of the sleeve abutting the outer end of the barrel, the outer end of the sleeve having longitudinal spaced slots and the exterior threads of said outer end of the sleeve being tapered, and a compensating nut on the tapered threads on the outer end of the sleeve for moving the interior threads of said outer end of the sleeve into engagement with the spindle threads upon wear of the latter.

1,461,006. FISHING TOOL. VIRGIL W. SWOVELAND, Tulsa, Okla. Filed June 1, 1920. Serial No. 385,592. 9 Claims. (Cl. 294—102.)

1. A fishing tool comprising a jar having a casing provided with a hollow interior portion; a portion of the

casing being formed to force a lost drilling tool away from the wall of a well casing and into the hollow interior portion of the jar; means, associated with the jar,

for gripping the lost tool when the jar is lowered into engagement therewith, and means, carried by the jar for severing a rope from the lost drilling tool.

1,461,007. KNITTING NEEDLE. SYDNEY E. TAFT, Framingham, Mass., assignor to Spartan Needle Company, Providence, R. I., a Corporation of Rhode Island. Filed Jan. 29, 1920. Serial No. 354,764. 25 Claims. (Cl. 66.5.)

1. A knitting instrument comprising a yarn drawing member and a sheath having a loop entering element arranged at one side of said yarn drawing member substantially midway between the edges of said sheath.

1,461,008. LUGGAGE CARRIER. ERNEST E. CONINE, Cortland, N. Y., assignor to The Brewer-Titchener Corporation, Cortland, N. Y., a Corporation of New York. Filed Dec. 19, 1921. Serial No. 523,598. 4 Claims. (Cl. 224—29.)

1. A luggage carrier for the running boards of automobiles and the like comprising in combination a lazy tongs, rigid end frames, means adapted for securing said end frames to the running board, connecting means at each end of the lazy tongs, said means each comprising members surrounding a member of and between the ends of its respective rigid frame, and one of said means for securing the end frames to the running board having a pivotal connection to its respective end frame to permit the latter to fold flatwise upon the running board.

1,461,009. SEPARABLE BUTTON. JOSEPH O. CHABOT, North Attleboro, Mass., assignor to George L. Paine Company, North Attleboro, Mass. Filed Nov. 2, 1922. Serial No. 598,569. 6 Claims. (Cl. 24—102.)

1. In a separable button, a pair of members each having a head, a shank of substantially rectangular cross section and a base, the base of one member being formed with a slot providing abutments which extend into the

shank interior, and a catch of substantially U-formation having a circular aperture in its base and having its arms formed with U-shaped cut-outs to receive the

abutments one of the sides of the shank of the other member being formed with a pressed-out part of concavo-convex cross section which extends into the circular aperture of the catch to secure the latter in position.

1,461,010. AUTOMATIC VALVE. SAMUEL S. AMDURSKY, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed May 29, 1920. Serial No. 385,327. 8 Claims. (Cl. 137—139.)

1. The combination with a source of fluid pressure, of an automatic valve comprising an expansible fluid pressure chamber in communication with said source of pressure, operating means normally tending to open said valve, and a stop member actuated by the expansible chamber cooperating with said means to hold the same in a position closing said valve and adapted to be moved to a position releasing said means when said expansible chamber has been enlarged a given amount under the influence of a predetermined pressure.

1,461,011. FORGING MACHINE. FRANK A. HALLECK, Oak Park, Ill., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed July 11, 1917. Serial No. 179,952. 37 Claims. (Cl. 76—5.)

1. Gaging die mechanism comprising a plurality of dies including one die having a gaging groove therein of curved section and of flatter transverse curvature at one end than at the other.

1,461,012. APPARATUS FOR USE IN BLASTING. RHYS D. HARRIS, Seven Sisters, Wales. Filed June 2, 1919. Serial No. 301,300. 2 Claims. (Cl. 86—21.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. An apparatus for use in blasting comprising a detonator carrying tube provided with a transversely disposed handle part having a slot or recess, and a rod slidably mounted within the detonator carrying tube and having a laterally or transversely disposed handle portion adapted to be received into the slot or recess of the transversely disposed handle part of the detonator carrying tube.

1,461,013. RIM-FIRE AMMUNITION. HOWARD D. HODGE, New York, N. Y., assignor to George Ramsey, New York, N. Y. Filed July 13, 1920. Serial No. 395,898. 7 Claims. (Cl. 102—17.)

1. In a rim fire cartridge, a shell adapted to form a suitable powder chamber, a priming retaining rim of relatively soft thin material, a priming composition within said rim, and a re-inforcing cup mounted within the head of said shell and having a portion extending within said rim sufficiently to interlock said cup with said shell, said cup being provided with flame openings to permit the priming material to fire the powder charge within the shell when the priming is ignited, and said openings being sufficiently small to retard the backward flow of gas pressure from the burning powder, thereby preventing excessive powder pressures from reaching the rim of the shell.

1,461,014. MACHINE FOR USE IN MAKING BOXES. DAVID A. LANDERS, Chicago, Ill., assignor to Wire-bounds Patents Company, Kittery, Me., a Corporation of Maine. Filed Sept. 13, 1919. Serial No. 323,450. 46 Claims. (Cl. 1—8.3.)

45. A machine for use in making wire-bound boxes comprising, in combination, fastener setting mechanism; means to cause relative progression between said mechanism and a succession of work assemblies; means controlling the progression to locate fasteners where desired in a work assembly; and means controlling the progres-

sion during the time a space between work assemblies is passing the fastener-setting mechanism whereby a like location of fasteners will be effected in a succession of work assemblies.

1,461,015. MACHINE FOR MAKING BROOM BUNDLES OR UNITS. HARRY D. NEFF, Cambridge, Mass., assignor to Re-Filit Broom Company, Boston, Mass., a Corporation of Massachusetts. Filed May 14, 1921. Serial No. 469,736. 3 Claims. (Cl. 300—1.)

1. In a machine of the class described, the combination of a body member provided with a band holding chamber, a removable block located in the body member in front of said chamber and having a funnel shaped orifice communicating with said chamber, and crimping means movable laterally with respect to said chamber.

1,461,016. LOCKING-TONGUE ENVELOPE. GEORGE R. PERRY, Brooklyn, N. Y., assignor to Western Envelope Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 19, 1921. Serial No. 516,417. 1 Claim. (Cl. 229—84.)

In an envelope, the combination with a sealing flap and panel for co-operation therewith, of a locking tongue

carried by the sealing flap, said panel having two transverse openings through which the tongue is projected successively in interlocking position, the transverse opening through which the tongue passes last having a lip projecting away from the sealing flap, said tongue having a transverse slot into which said lip projects in locking position, and the tongue being provided along its edges with a pair of hooks for engagement with the transverse opening having the lip.

1,461,017. APPARATUS FOR THE CONVERSION AND TRANSFORMATION OF LIQUIDS, FLUIDS, AND OILS. JOSEPH H. ADAMS, Flatbush, N. Y., assignor to The Texas Company, Houston, Tex., a Corporation of Texas. Filed Dec. 5, 1917. Serial No. 205,528. 22 Claims. (Cl. 196—14.)

12. In apparatus for converting high boiling hydrocarbon oil into lower boiling products, the combination of a converter, an outlet discharge pipe therefor located at a predetermined height immediate its ends, an inlet pipe communicating with said converter, means for continuously passing liquid oil through said inlet pipe into said converter and, in serving in conjunction with said outlet pipe to maintain a substantially constant oil level therein, a furnace surrounding said converter above its lower end for externally applying cracking heat under super-atmospheric self-imposed vapor pressure to the oil therein, and means for returning to said converter for retreatment the liquid oil discharged therefrom.

THE OFFICIAL GAZETTE

OF THE
United States Patent Office.

Vol. 312—No. 2.

TUESDAY, JULY 10, 1923.

Price—\$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, \$5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

Changes in the Directory of the Patent Office.

The following changes in the Directory of the Patent Office are announced:

First Assistant Examiner C. F. Haden, Acting Examiner in charge of Division II, promoted to Principal Examiner June 16, 1923, in charge of the same division.

The Chief Clerk's office has been moved to Room 204.

Division XXXVI has moved to Room 265.

Since the death of Principal Examiner Mitchell on May 27, 1923, Acting Examiner O. F. Hunter has been in charge of Division X.

ADJUDICATED PATENTS.

(U. S. C. C. A. Ala.) Wood patent, 1,182,439, for vanes for centrifugal pumps, *Held* not anticipated, valid, and infringed. *Atlantic, Gulf & Pacific Co. v. Wood*, 288 Fed. Rep., 148.

Interference Notices.

U. S. PATENT OFFICE, Washington, June 21, 1923.

Richard L. Clements, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the patent granted December 26, 1922, No. 1,440,057, to Richard L. Clements, care of J. E. Regan Machine Works, 76 Seventh Street, Long Island City,

N. Y., and an application for patent filed by Melchior Armato, 1284 Clybourn Avenue, Chicago, Ill., and a notice of such declaration sent by registered mail to said Clements at the address of record and reforwarded to 4 Ketcham Place, Elmhurst, N. Y., the address furnished by his attorney, having been returned by the post office undeliverable, notice is hereby given that unless said Clements, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING,
Acting Commissioner.

U. S. PATENT OFFICE, Washington, June 15, 1923.

Adolf Bromberg, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application for patent filed by Adolf Bromberg, 167 Wooster Street, New York, N. Y., and an application for patent filed by Elmer S. Rutter, 510 Palisade Avenue, Weehawken Heights, N. J., and a notice of such declaration sent to said Bromberg at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Bromberg, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

Disclaimer.

1,323,053.—*George Edgar Hazard*, Rochester, N. Y. AUTO-MOBILE-DRIVEN TIRE PUMP. Patent dated November 25, 1919. Disclaimer filed June 22, 1923, by the patentee and the assignee, *Kellogg Manufacturing Co.* Hereby enter this disclaimer to said claim of the specification of said Letters Patent, which claim is as follows:

"4. An improved automobile tire pump structure, comprising an eccentric case containing a lubricant, a cylinder mounted thereon, a separating wall between the lower end of the cylinder and at the top of the case, a piston in the cylinder, an operating shaft in the case, a separating wall having a piston rod bearing opening, and a piston rod passing through the said opening and operatively connecting the piston and operating shaft."

Notice Regarding Payment of Fees.

All fees must be paid in advance. Payment of money required for Office fees *must* be made in specie, Treasury notes, national-bank notes, post-office money orders, or certified checks. Money orders and checks must be made payable to the "Commissioner of Patents." Money sent by mail to the Patent Office will be at the risk of the sender. (See Rule 194.)

Certified checks, bank drafts, express and foreign money orders must be immediately negotiable in this country and for the full amount of the fee required by the Patent Office. No allowance can be made by this Office for any charge for their collection or exchange. Postage stamps will not be accepted. Failure to comply with the above instructions will cause delay.

Condition of Applications Under Examination at Close of Business June 29, 1923.

Room No.	(Total number of applications awaiting action, excluding Trade-Mark Division, 74,690; Trade-Mark Division, 3,822. Oldest new case, Aug. 17, 1922; oldest amended, Aug. 21, 1922. The dates given are 1922 except where * indicates 1923.)	Divisions, Examiners, and subjects of inventions.	Oldest new application and oldest action by applicant awaiting office action.		No. of applications awaiting action.
			New.	Amended.	
314	1. LOEFFLER, F. A., Closure Operators; Fences; Gates; Harrows and Diggers; Plows; Planting; Scattering Unloaders; Trees, Plants, and Flowers.	Sept. 29	Sept. 23	1,244	
128	2. HADEN, C. F. (Acting), Bee Culture; Dairy; Preserving; Presses; Tents, Canopies, Umbrellas, and Canes; Tobacco.	Sept. 1	Sept. 12	1,562	
175	3. RICH, W. M. J., Electric Heating and Rheostats; Electrochemistry; Heating; Metal Founding; Metallurgical Apparatus; Metallurgy; Metal Treatment; Plastic Metal Working.	Sept. 2	Sept. 9	1,752	
234	4. MERRITT, A. D., Conveyers, Chutes, Skids, Guides, and Ways; Conveyers, Fluid Current; Conveyers, Power Driven; Excavating; Handling—Hand and Hoist-Line Implements; Material or Article Handling; Pushing and Pulling Implements; Railway Mail Delivery; Traversing Hoists.	Sept. 14	*Feb. 14	1,499	
167	5. MCNAB, J. F., Bookmaking; Books, Strips, and Leaves; Harvesters; Jewelry; Manfolding; Music; Printed Matter; Tying Cords or Strands.	Sept. 1	Sept. 14	1,428	
318	6. LEWERS, A. M., Bleaching and Dyeing; Chemicals; Chemistry—Carbon Compounds; Explosive, Pyrotechnic, and Match Compositions; Fertilizers; Liquid Coating Compositions; Medicines; Plastic Compositions; Substance Preparation.	Sept. 12	*Feb. 8	1,830	
312	7. JARBOE, C. G., Games and Toys; Optics; Photography.	Sept. 2	Nov. 23	2,680	
133	8. CLIFT, J. W., Beds; Chairs and Seats; Furniture; Kitchen and Table Articles; Store Furniture; Supports.	*Jan. 2	*Mar. 23	1,551	
221	9. TRYON, F. M., Air and Gas Pumps; Hydraulic Motors; Injectors and Ejectors; Motors, Fluid; Motors, Fluid Current; Pumps.	Oct. 5	*May 18	834	
235	10. MITCHELL, T. H., Land Vehicles; Land Vehicles, Animal Draft Appliances; Land Vehicles—Bodies and Tops; Land Vehicles—Dumping; Land Vehicles, Wheel Substitutes; Motor Vehicles.	Sept. 15	Oct. 10	1,480	
154	11. ARMSTRONG, H. C., Boot and Shoe Making; Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Hides, Skin, and Leather; Leather Manufactures; Nailing and Stapling; Whips and Whip Apparatus.	*Jan. 2	Nov. 7	959	
322	12. PIERCE, P. P., Machine Elements.	Nov. 5	Dec. 26	1,470	
329	13. NIXON, G. A., Bolt, Nail, Nut, Rivet, and Screw Making; Chain, Staple, and Horseshoe Making; Driven, Headed, and Screw-Threaded Fastenings; Gear Cutting, Milling, and Planing; Metal Drawing; Metal Forging and Welding; Metal Rolling; Metal Working; Needle and Pin Making; Turning.	Sept. 8	*Mar. 15	1,233	
323	14. BRUMBAUGH, N. J., Compounding Tools; Cutting and Punching Sheets and Bars; Farriery; Metal Bending; Metal Tools and Implements, Making; Sheet-Metal Ware, Making; Tools; Wire Fabrics and Structure; Wire Working.	Sept. 1	*May 12	1,180	
308	15. REDROW, W. L., Glass; Laminated Fabric and Analogous Manufactures; Paper Making and Fiber Liberation; Plastic Block and Earthenware Apparatus; Plastics.	Sept. 14	Oct. 18	2,108	
112	16. BACKUS, C. D., Radiant Energy—Telegraphy; Telephony.	Sept. 2	Sept. 1	2,478	
307	17. RAFTER, G. S., Coating, Label Pasting, and Paper Hanging; Nut and Bolt Locks; Ornamentation; Paper Manufactures; Printing; Type Casting; Sheet-Material Association or Folding; Sheet or Web Feeding or Delivering; Type Setting.	Sept. 5	Dec. 2	1,499	
229	18. PORTER, M. E., Liquid Heaters and Vaporizers; Motors, Expansible-Chamber Type; Power Plants; Speed-Responsive Devices.	Aug. 17	Sept. 1	2,052

DECISIONS IN PATENT AND TRADE-MARK CASES.

Supreme Court of the United States.

A. BOURJOIS & COMPANY, INC., v. KATZEL.

Decided January 29, 1925.

1. TRADE-MARKS—INFRINGEMENT—USE OF TRADE-MARK IN UNITED STATES BY FOREIGN COMPANY AFTER SALE OF ITS BUSINESS IN THE UNITED STATES WITH ITS UNITED STATES TRADE-MARKS.

Where a foreign manufacturing company doing business in the foreign country and also in the United States sells its business in the United States with its good will and trade-marks registered in the United States, and where the assignee goes on with the business, using substantially the same form of container and label, and importing its goods from the foreign country, the foreign company cannot rightfully come to the United States and use its old marks on goods manufactured by it in the foreign country, nor can it, whether for the purpose of evading the effect of the transfer or not, arrange with an agent to sell with the old label.

2. SAME—SAME—SAME—ORIGIN OF GOODS NOT TRULY INDICATED BY FOREIGN TRADE-MARK, SUBSTANTIALLY THE SAME AS UNITED STATES TRADE-MARK, ON FOREIGN GOODS NOT HANDLED BY ASSIGNEE.

It is not accurate to say that the trade-mark here is that of the foreign house and truly indicates the origin of the goods. In the United States it is the trade-mark of the assignee only, and indicates in law that the goods come from the assignee although not made by it.

ON writ of certiorari to the United States Circuit Court of Appeals for the Second Circuit.

Mr. Hans v. Briesen and *Mr. William A. Redding* for the petitioner.

Mr. Manton M. Wybell and *Mr. John B. Doyle* for the respondent.

Mr. Justice HOLMES delivered the opinion of the Court.

This is a bill to restrain the infringement of the trade-marks "Java" and "Bourjois" registered in the Patent Office of the United States. A preliminary injunction was granted by the district court, (274 Fed. Rep., 856; 290 O. G., 227,) but the order was reversed by the circuit court of appeals, one judge dissenting. (275 Fed. Rep., 539.) A writ of certiorari was granted by this Court. (257 U. S. 630.) In 1913 A. Bourjois & Cie., E. Wertheimer & Cie. Successeurs, doing business in France and also in the United States, sold to the plaintiff for a large sum their business in the United States, with their good will and their trade-marks registered in the Patent Office. The latter related particularly to face powder, and included the above words. The plaintiff since its purchase has registered them again and goes on with the business that it bought, using substantially the same form of box and label as its predecessors and importing its face powder from France. It uses care in selecting colors suitable for the American market, in packing and in keeping up the standard, and has spent much money in advertising, etc., so that the

business has grown very great and the labels have come to be understood by the public here as meaning goods coming from the plaintiff. The boxes have upon their backs: "Trade Marks Reg. U. S. Pat. Off. Made in France—Packed in the U. S. A. By A. Bourjois & Co. Inc. of New York, Succ'rs. in the U. S. to A. Bourjois & Cie. and E. Wertheimer & Cie."

The defendant, finding that the rate of exchange enabled her to do so at a profit, bought a large quantity of the same powder in France and is selling it here in the French boxes which closely resemble those used by the plaintiff except that they have not the last quoted statement on the backs, and that the label reads "Poudre de riz de Java" whereas the plaintiff has found it advisable to strike out the suggestion of rice powder and has "Poudre Java" instead. There is no question that the defendant infringes the plaintiff's rights unless the fact that her boxes and powder are the genuine product of the French concern gives her a right to sell them in the present form.

[1, 2] We are of opinion that the plaintiff's rights are infringed. After the sale the French manufacturers could not have come to the United States and have used their old marks in competition with the plaintiff. That plainly follows from the statute authorizing assignments. (Act of Feb. 20, 1905, c. 592, sec. 10; 33 Stat., 727.) If for the purpose of evading the effect of the transfer it had arranged with the defendant that she should sell with the old label, we suppose that no one would doubt that the contrivance must fail. There is no such conspiracy here, but apart from the opening of a door to one, the vendors could not convey their goods free from the restriction to which the vendors were subject. Ownership of the goods does not carry the right to sell them with a specific mark. It does not necessarily carry the right to sell them at all in a given place. If the goods were patented in the United States a dealer who lawfully bought similar goods abroad from one who had a right to make and sell them there could not sell them in the United States. (*Boesch v. Gräff*, 133 U. S., 697; 51 O. G., 477.) The monopoly in that case is more extensive, but we see no sufficient reason for holding that the monopoly of a trade-mark, so far as it goes, is less complete. It deals with a delicate matter that may be of great value but that easily is destroyed, and therefore should be protected with corresponding care. It is said that the trade-mark here is that of the French house and truly indicates the origin of the goods. But that is not accurate. It is the trade-mark of the plaintiff only in the United States and indicates in law, and, it is found, by public understand-

ing, that the goods come from the plaintiff although not made by it. It was sold and could only be sold with the good will of the business that the plaintiff bought. (*Eiseman v. Schiffer*, 157 Fed. Rep., 473.) It stakes the reputation of the plaintiff upon the character of the goods. (*Menendez v. Holt*, 128 U. S., 514; 46 O. G., 971.) The injunction granted by the district court was proper under secs. 17 and 19 of the Trade-Mark Act. (Act of Feb. 20, 1905, c. 592.)

Decree of circuit court of appeals reversed.

Court of Appeals of the District of Columbia.

REPLOGLE v. THE AIR-WAY COMPANY.

No. 1,527. Decided March 5, 1923.

1. TRADE-MARKS—"AIRWAY"—INTERFERENCE BETWEEN REGISTRANT AND HIS SUCCESSOR IN BUSINESS.

Where R. transferred his entire business as a manufacturer, and with it whatever right he had to his trade-mark, and an interference was declared between R., the registrant, and his successor, who applied for registration on the same mark, *Held* that it was unnecessary to determine whether or not R. was the first to adopt and apply the mark to the goods, for if he was the first he conveyed his right, in connection with his business, to his successor. Accordingly the interference was decided in favor of the applicant.

2. SAME—SALE OF BUSINESS AND GOODWILL CARRIES WITH IT THE SALE OF THE TRADE-MARK.

A sale of a business and of its goodwill carries with it the sale of the trade-mark used in connection with the business, although not expressly mentioned in the instrument.

3. SAME—ALLEGED EXPIRATION OF RIGHT AFTER DECISION OF COMMISSIONER FROM WHICH APPEAL IS TAKEN.

Where R. urged that his successor's right to the mark had ceased because of an alleged forfeiture of an agreement or license, *Held* that if forfeiture took place after the decision of the Commissioner of Patents it could not be considered, because it is the duty of the court to review the decision upon the record of the proceedings in the Patent Office.

4. INTERFERENCE—EVIDENCE—UNVERIFIED STATEMENTS MADE BY PARTY TO THE INTERFERENCE ACTING PRO SE.

A statement made by R., not as a witness under oath, but as counsel, is at best only a belief on his part and can not be given any weight.

5. TRADE-MARKS—EFFECT ON RIGHT TO TRADE-MARK OF RETURNING ONE OF SEVERAL PATENTS TO LICENSOR BY LICENSEE WHO PURCHASED LICENSOR'S BUSINESS AND TRADE-MARK.

Where R., who was engaged in manufacturing and selling the products covered by several patents belonging to him, transferred his entire business and with it whatever right he had to his trade-mark and delivered to the purchaser an exclusive license to manufacture and sell all the products covered by R.'s patents and applications, the right to R.'s business and trade-mark was not forfeited by the return of one of the patents to R. in the absence of an agreement to that effect.

Mr. D. B. Replogle pro se.

Mr. C. W. Owen for The Air-Way Co.

Before Chief Justice SMYTH, Justice ROBB, and Judge SMITH, of the United States Court of Customs Appeals.

SMYTH, C. J.:

This is a trade-mark interference proceeding in which the decision of the Patent Office was against

Daniel B. Replogle and in favor of The Air-Way Company. The contest relates to the use of the name "Air-Way" on electric vacuum cleaners and parts thereof.

Replogle filed his application for registration of a composite mark consisting of the words "Pneumode" and "Air-Way" on November 15, 1918, alleging that he had commenced the use of the mark sometime prior thereto. Just before the filing of his application Replogle was engaged in manufacturing and selling under the name of Bright Circle Mfg. Co., an electric vacuum cleaner and parts thereof invented by him and covered by certain patents to which he applied the mark just mentioned. The Air-Way Company sought registration of the name "Air-Way" on December 26, 1919, having adopted it in the previous April.

In October, 1918, Replogle and another entered into an agreement with one Charles F. Bacon, of Toledo, Ohio, whereby Replogle agreed to deliver, at the request of Bacon, to a corporation to be formed, an exclusive license to manufacture and sell all of the products covered by the patents referred to, and applications for patents, belonging to Replogle, the license to last during the respective terms of the patents. Under this agreement Replogle was to receive a certain percentage of the gross sales as royalties, and three hundred dollars per month as a minimum royalty. The corporation was to proceed with reasonable diligence to manufacture at least a thousand of the cleaners and put the same upon the market as soon as practicable. The contract further provided that Replogle should receive from the corporation an exclusive agency in the States of Oregon, Washington, and California for the sale of the articles manufactured under the license.

The corporation was formed, in accordance with the contract, and took the name of The Air-Way Company. It is this company which applies for registration of the mark "Air-Way." In due time the license provided for was delivered, at the request of Bacon, to the corporation, and the contract was in all respects carried out by the parties thereto. In addition to securing the license, The Air-Way Company purchased and took over all the business, goodwill, cleaner parts, tools, jigs, and property of every kind formerly used or employed by Replogle under the name of the Bright Circle Mfg. Co.

[1] It appears, then, that Replogle transferred the entire business of the Bright Circle Mfg. Co. to the corporation, and with it whatever rights he had to the mark "Air-Way", and from that time on The Air-Way Company had the right to use the mark on the goods which it manufactured under the license. In view of this it is not necessary to determine whether or not Replogle was the first to adopt and apply the mark to patented goods, for if he was the first he conveyed his right in connection with his business to The Air-Way Company.

[2] We have said that where the owner of a trade-mark grants the right to another, either by sale or license, to use the mark on the goods with which its use is connected, and abandons its use himself, he can not afterwards either deprive his assignee of the right to its use or set up an adverse use. By use in connection with the business the assignee acquires the title abandoned by the assignor, and the title is of that exclusive character which is entitled to protection even against such assignor. (*Macwilliam v. President Suspender Company*, 46 App. D. C., 45; 242 O. G., 255, and cases cited.) The question is very fully discussed in *President Suspender Co. v. Macwilliam* (238 Fed., 159), where many decisions are referred to. It is there said that there is no such right known to the

law as an exclusive ownership of a trade-mark apart from the right to use it in a business. It can not exist as a right in gross. A sale of a business and of its goodwill carries with it the sale of the trade-mark used in connection with the business, although not expressly mentioned in the instrument of sale. Replogle had no right to the mark apart from the right to use it in connection with his business. That business was transferred to The Air-Way Company in December, 1918. If Replogle had the right to have the mark registered before he transferred his business to The Air-Way Company (and for the purpose of this case we assume he did), then the latter company acquired that right by transfer, and possessed it at the time it made its application on December 26, 1919.

But Replogle insists that the agreement under which he transferred the business and the mark was not a contract, but a simple license, upon condition, inter alia, that The Air-Way Company would comply with its terms. The same defense was made in *President Suspender Co. v. Macvilliam*, supra. In disposing of it the court said that it was unable to perceive any reason for holding that a patentee who gives an exclusive license to another to manufacture and sell a patented article for the life of the patent, and who at the same time transfers the goodwill of the business to the licensee, retains any right to the trade-mark which he can avail himself of during the life of the patent ordinarily or on its expiration. The right of the plaintiff to the trade-mark must be regarded as exclusive of the defendant, as was the plaintiff's right to manufacture and sell the patented article.

[3, 4] It is urged by Replogle that the agreement or license has been forfeited so far as the cord reel covered by one of the assigned patents is concerned, and that because of this The Air-Way Company's right to the mark has ceased. The reel is but part of the cleaner. When this alleged forfeiture took place does not appear. If it took place after the decision by the Commissioner of Patents, we cannot consider it, because our duty is to review the decision upon the record of the proceedings in the Patent Office. (33 Stat., 727; Rev. Stat., 4014.) The only reference to it in the record appears in a statement made by Replogle—not as a witness under oath, but as counsel—that The Air-Way Company, he believed, had agreed to transfer the cord reel patent back to him. At best it is only a belief on his part. If it was a fact he could have proven it without difficulty. We can not give this statement any weight. Moreover, he does not say with whom the agreement was made, but, if made, it must have been with him. If it was the intention of the parties that the trade-mark should be returned to him at the same time the cord reel patent was returned, why did not the agreement say so? Must we not assume that since it is silent on the subject the parties did not intend it should be returned?

[5] At the bar it was admitted that The Air-Way Company had ceased to manufacture the cord reel, but the time when it ceased to do so was not given. Unless, we repeat, it was before the decision of the Commissioner we cannot consider it. Anyhow it was not admitted that the title to the trade-mark was to be returned. In this regard it must be remembered that there is nothing in the license of the patents about the transfer of the Bright Circle Mfg. Co.'s business or the trade-mark. That, so far as the record is concerned, was the result of a separate agreement. The nonperformance of the conditions of the license contract in no way affected the title to the business or trade-mark conveyed to The Air-Way Company. To say that it did would be to write into the contract something that was not placed there by the parties. This we can not do.

The decision of the Commissioner is affirmed.

PATENT SUITS.

[Notices under section 4921, Revised Statutes, as amended February 18, 1922.]

783,410, J. Bergoff, Box, suit filed Dec. 12, 1921, U. S. D. C., S. D. N. Y., Doc. E 22/329, *Warner Jewelry Case Co. v. Frank & Gutman, Inc.* Consent order on motion of complainant dismissing bill.

Changes in Classification.

(ORDER NO. 2,825.)

U. S. PATENT OFFICE, Washington, June 27, 1923.

The following changes in the classification of inventions are hereby directed, to take effect immediately:

In class 1, Nailing and Stapling (Division XI), establish the following subclasses and definitions:

49.5. Nail loaders—

49.6. Implements.

49.7. Nail strippers.

49.5. NAIL LOADERS. Nail loaders for loading or assisting in loading magazine or magnetic nail-driving implements.

49.6. NAIL LOADERS, IMPLEMENTS. The nail loader is an implement.

49.7. NAIL STRIPPERS. Nail strippers adapted to feed nails from bulk into a position where one or more nails may be grasped by an operator and removed for driving.

The patents contained in these subclasses have been taken for the most part from class 1, Nailing and Stapling, subclass 6, Machines, Nail driving, Nail feeding.

In class 245, Wire Fabrics and Structure (Division XIV), establish the following subclass and definition:

1.5. Tire-bead grommets.

1.5. TIRE BEAD GROMMETS. Ring-shaped articles formed for the most part of wire adapted for reinforcing the beads of pneumatic tires and processes of making the same.

Search Classes—

29—METAL WORKING, subclass 156, Blanks and processes, Ferrules, rings, thimbles, and tubes, for similar devices having various other uses.

152—RESILIENT TIRES AND WHEELS, appropriate subclasses, for tires embodying these elements.

The patents contained in this subclass have been taken for the most part from class 152, Resilient Tires and Wheels, subclass 13, Tires, Pneumatic.

In class 294, Handling—Hand and Hoist-Line Implements (Division IV), establish the following subclass and definition:

65.5. Magnet.

65.5. MAGNET. Devices for raising material by means of one or more magnets.

Note.—The structure of the magnet itself is found in class 175, ELECTRICITY—GENERAL APPLICATIONS, subclass 367, Electromagnets, Lifting or holding. See also class 175, subclass 21, Electromagnets.

Note.—See this class (294), subclass 88, for grapples controlled by magnets.

The patents contained in this subclass have been taken for the most part from class 175, Electricity—General Applications, subclass 367, Electromagnets, Lifting or holding.

THOMAS E. ROBERTSON,

Commissioner.

TRADE-MARKS

OFFICIAL GAZETTE, JULY 10, 1923.

[Vol. 312. No. 2.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911:

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 118,198. (CLASS 21. ELECTRICAL APPARATUS, MACHINES AND SUPPLIES.) WILSON WELDER & METALS COMPANY, INC., New York, N. Y. Filed May 5, 1919.

Plastic-Arc

Particular description of goods.—Electric Welding Machines, Electric Cables, Electric Resistance Units, Electrodes, Electric Motors, Electric Generators, Electric Switchboards, Electric-Switchboard Panels, Electric Switches, and Electric Welding Transformers.

Claims use since about Jan. 30, 1919.

Ser. No. 131,017. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) DANNER CO., Portland, Oreg. Filed Apr. 12, 1920.

Particular description of goods.—Metal-Polishing Compound.

Claims use since Dec. 15, 1919.

Ser. No. 145,957. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) NAUMKEAG STEAM COTTON CO., Salem, Mass. Filed Apr. 9, 1921.

The diamond-shaped figure has a blue background having a white center with the numeral "4" printed thereon in blue.

Ser. No. 154,939. (CLASS 48. MALT BEVERAGES, EXTRACTS, AND LIQUORS.) HARRISON D. STERICK, doing business as Diamond Food Products Company and National Food Corporation, Pittsburgh, Pa. Filed Nov. 2, 1921.

MONASTERY

Particular description of goods.—Combination of Malt Extracts for Beverage Purposes, Including Malt for Making Nonalcoholic Beverages.

Claims use since on or about Aug. 1, 1919.

Ser. No. 155,900. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) SHINTARO MAESHIMA, Tokyo, Japan. Filed Nov. 25, 1921.

No claim is made to the representation of the goods forming part of the mark apart from such mark as shown.

Particular description of goods.—Therapeutical Apparatus Called Oxyhealer Used for Injecting Oxygen Into the Body.

Claims use since March, 1915.

Ser. No. 155,940. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE UNRUH H. P. Co., Chanute, Kans. Filed Nov. 25, 1921.

UNRUMENE

Particular description of goods.—Germicidal Remedy Used in Cases of Colds, Sore Throat, Cuts, Burns, Bruises, Boils, and Insect Bites.

Claims use since Sept. 1, 1921.

Ser. No. 156,499. (CLASS 11. INKS AND INKING MATERIALS.) GEO. H. MORRILL Co., Norwood, Mass. Filed Dec. 9, 1921.

No registration rights are claimed for the words "News Ink" and "Squirt Feed" apart from the mark shown in the drawing.

Particular description of goods.—Printing Ink.

Claims use since Nov. 29, 1921.

Ser. No. 158,815. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) HORACE G. CRAVEN, doing business as Bouillonized Peanut Company, Philadelphia, Pa. Filed Feb. 3, 1922.

Applicant makes no claim for the word "Peanuts" apart from the other features of the mark.

Particular description of goods.—Peanuts Prepared with Meat Extract.

Claims use since Jan. 19, 1922.

Ser. No. 160,434. (CLASS 37. PAPER AND STATIONERY.) WILLIAM A. RINGLER, Philadelphia, Pa. Filed Mar. 9, 1922.

THRIFT MILEAGE

Particular description of goods.—Receipt Books and Filing Cards for Bookkeeping Purposes.

Claims use since about Feb. 7, 1922.

Ser. No. 162,581. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE ROOD CANDY COMPANY, doing business as Roods, Pueblo, Colo. Filed Apr. 19, 1922.

Daddy's Dream

Particular description of goods.—Candy.
Claims use since Feb. 1, 1922.

Ser. No. 162,721. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) CAPITOL CHEMICAL COMPANY, Somerville, Mass. Filed Apr. 22, 1922.

PALMERGLOSS

Particular description of goods.—Stove Polish.
Claims use since Sept. 14, 1920.

Ser. No. 163,099. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) THE LIONEL CORPORATION, New York, N. Y. Filed Apr. 29, 1922.

LIONEL ELECTRIC TOY TRAINS

No claim made to the exclusive use of the words "Electric Toy Trains" apart from the mark shown on the drawing.

Particular description of goods.—Electrical Toys.
Claims use since about 1916.

Ser. No. 164,843. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) GUSTAV TWELLSICK, doing business as August Reutershan, Solingen, Germany. Filed June 2, 1922.

VICTOR

Particular description of goods.—Tin Openers, Corkscrews, Pocketknives, Scissors, and Hair Clippers.
Claims use since Jan. 1, 1918.

Ser. No. 165,035. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FRANCOIS X. RONDEAU, doing business as Radio Stomach Relief Co., Brockton, Mass. Filed June 5, 1922.

Radio

Particular description of goods.—Stomach Preparation.
Claims use since Feb. 17, 1922.

Ser. No. 165,343. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) FRED BUTTERFIELD & CO. INC., New York, N. Y. Filed June 12, 1922.

KIRKMUIR ZEPHYRS

No claim made to the word "Zephyrs" apart from the mark shown in the drawing.

Particular description of goods.—Ginghams in the Piece.

Claims use since Aug. 4, 1921.

Ser. No. 165,584. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FARBWERKE VORM. MEISTER LUCIUS & BRUNING, Höchst-on-Main, Germany. Filed June 16, 1922.

Particular description of goods.—Chemical Products for Industrial, Scientific, and Photographic Purposes—Namely, Coal-Tar Intermediate Products, Artificial Indigo, Artificial Alizarine, Hydrosulphites, Aniline Oil, Aniline Salt, Resorcin, β -Naphthol, Naphthylamine, Paranitriline, Metanitroparatoluidine, Orthonitrotoluidine, Orthonitroparaphenetidine, Benzidine, Dianisidine, Chloranisidine, Parasanol, Para Acid, Anthrachinone, Methyl Orange, Chromchloride, Cerchloride, Potassium Sulphite, Acetaldehyde, Acetone, Antichlor, Caustic-Soda Lye, Chlorine, Chrome Alum, Diethylsulphate, Sodium Acetate, Sodium Bisulphite, Sodium Sulphite, Olein, Paraldehyde, Sulphate, Hydrogen, Zinc Powder, Photographic Developers, and Sensitizers; Dystuffs; Mordants for Dyeing and Printing Purposes; Acids—Namely, Acetic Acid, Acetic-Acid Essence, Acetic-Acid Anhydrid, Monochloroacetic Acid, Nitric Acid, Hydrochloric Acid, and Sulphonic Acid; Tanning Materials; Disinfectants; Plant and Animal Extirpatives—Namely, Fungicides, Germicides, Insecticides, and Parasitocides; Benzoic Acid for Preservation of Foodstuffs; Pharmaceutical and Therapeutical Preparations—Namely, Antigonorrhoeics, Analgesics, Antineuralgics, Antipyretics, Antirheumatics, Antiarthritics, Anesthetics, Antidiabetics, Antihelmintics, Antidyspnoics, Antisyphilitics, Astringents, Antiparasitics, Antichlorotics, Antidiarrhoeics, Antihidrotics, Antiphthistics, Anti-blennorrhoeics, Antispasmodics, Digestives, Desiccatives, Biological Reagents and Diagnostics, Dietetics, Cardiac Tonics, Diuretics, Diaphoretics, Expectorants, Hemostatics, Iodine Preparations, Mydriatics, Nutrients, Laxatives, Narcotics, Organotherapeutics, Ocytotics, Tonics and Vasotonics, Urinary Antiseptics, Uric-Acid Solvents, Vulneraries, Serums, and Vaccines; and Preservatives for Leather and Wood—Namely, Antiseptic Chemical Substances in Liquid or Paste Form Used as Preservatives and Sanitary Coatings or Dressings for Wood, Stone-work, Brickwork, and Metal.

Claims use since November, 1919.

Ser. No. 165,791. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) GEO. R. GIBSON CO., New York, N. Y. Filed June 21, 1922.

SAN ASEPTIC

No claim made to the word "Aseptic" apart from the mark shown.

Particular description of goods.—Toothbrushes.

Claims use since Apr. 22, 1909.

Ser. No. 166,134. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE DRUG PRODUCTS CO. INC., Long Island City, N. Y. Filed June 27, 1922.

VITA-YEAST

The word "Yeast" appearing on the drawing is disclaimed apart from the mark as shown.

Particular description of goods.—Food Tonic and General Stimulant to Cell Metabolism, Put Up in Tablet and Granular Form.

Claims use since Aug. 16, 1921.

Ser. No. 166,498. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) MICHAEL J. BROWN, Philadelphia, Pa. Filed July 5, 1922.

THE BROWNEE

Particular description of goods.—Fruit Presses.

Claims use since October, 1921.

Ser. No. 166,747. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) ELMER F. MILLER, San Francisco, Calif. Filed July 11, 1922.

No claim made to the combined words "Klee-na-brush" apart from the mark shown. The lining on the drawing indicates the colors red and black.

Particular description of goods.—Paint Remover.

Claims use since Feb. 16, 1922.

Ser. No. 169,272. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) ALLIED GOLF COMPANY, Chicago, Ill. Filed Sept. 11, 1922.

John Potter

The trade-mark "John Potter" is the facsimile signature of Mr. John Potter, a golf-club manufacturer, and applicant files herewith the consent of Mr. Potter for the use of the signature in this trade-mark application.

Particular description of goods.—Golf Clubs.

Claims use since Aug. 23, 1922.

Ser. No. 169,510. (CLASS 7. CORDAGE.) G. F. WRIGHT STEEL & WIRE COMPANY, Worcester, Mass. Filed Sept. 15, 1922.

SUPERIOR
BRAND

Exclusive rights to the words "Superior" and "Brand" apart from the mark as shown on the drawing are hereby disclaimed.

Particular description of goods.—Wire Rope and Wire Clothesline.

Claims use since Mar. 1, 1922.

Ser. No. 169,626. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) THE DOMESTIC ELECTRIC COMPANY, Cleveland, Ohio. Filed Sept. 18, 1922.

Domestic

Particular description of goods.—Radio Apparatus—Namely, Telephone Receivers.

Claims use since about May, 1922.

Ser. No. 170,086. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PAUL PROT & CIE., doing business as Parfumerie Lubin, Paris, France. Filed Sept. 29, 1922.

In the drawing the words "Lubin" and "Paris" appearing upon a red background as shown, the apex of the design being red, the word "Paris" being disclaimed apart from the mark shown.

Particular description of goods.—Perfumes, Toilet Waters, Face Powder, Talcum Powder, Face Lotion, Face Cream, and Rouge.

Claims use since May, 1920.

Ser. No. 171,061. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JESSIE ANN BOND, doing business as J. & A. Bond, Hamilton, Ontario, Canada. Filed Oct. 23, 1922.

The portrait appearing in the drawing is that of applicant. No claim is made to the exclusive use of the descriptive matter "Eczema Treatment, Full Directions on Wrapper, A Sure Relief for Eczema and All Skin Diseases," which is disclaimed apart from the mark shown in the drawing.

Particular description of goods.—Salve for the Relief of Eczema, Salt Rheum, Acne, Psoriasis, Running Sores, Barbers' Itch, Burns, Felons, and All Diseases of the Skin.

Claims use since April, 1917.

Ser. No. 171,473. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) SATURN MFG. & SALES CO. INC., New York, N. Y. Filed Nov. 1, 1922.

SATURN

Particular description of goods.—Electric and Radio Telephone Jacks, Plugs, and Connections.

Claims use since Aug. 18, 1922.

Ser. No. 171,508. (CLASS 39. CLOTHING.) PARKER-BRIDGET COMPANY, Washington, D. C. Filed Nov. 2, 1922.

Parker
Boy

Particular description of goods.—Boys' Suits.
Claims use since Sept. 1, 1921.

Ser. No. 171,512. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) A. SCHRADER'S SON, INCORPORATED, Brooklyn, N. Y. Filed Nov. 2, 1922. Under ten-year proviso.

SCHRADER

Particular description of goods.—Pneumatic Valves, Pneumatic-Valve Casings, Valve Insides, Valve-Repair Tools, Valve Dust Caps, Pneumatic-Valve Caps, Pneumatic-Valve Nuts, Pneumatic-Valve Washers, Pneumatic-Valve Bushings, Pump Connections, Pump Couplings, Metallic Pneumatic Tubes or Chutes, Spreaders, Air Chucks, and Ferrules.

Claims use since Feb. 12, 1895.

Ser. No. 171,599. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) THE TEBBETTS AND GARLAND STORE, Chicago, Ill. Filed Nov. 4, 1922.

STEEPRITE

Particular description of goods.—Aluminum Teapots.
Claims use since Aug. 16, 1922.

Ser. No. 171,600. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) THE TEBBETTS AND GARLAND STORE, Chicago, Ill. Filed Nov. 4, 1922.

PERKRITE

Particular description of goods.—Aluminum Percolators.

Claims use since Aug. 16, 1922.

Ser. No. 171,799. (CLASS 27. HOROLOGICAL INSTRUMENTS.) HOFFMAN BROS. Inc., doing business also as Hofbros W. Co., New York, N. Y. Filed Nov. 10, 1922.

HOFBROS W.CO.

Particular description of goods.—Watches, Clocks, Dials, Watch Movements and Parts Thereof, and Watch cases.

Claims use since about the middle of the year 1919.

Ser. No. 172,221. (CLASS 39. CLOTHING.) HAWLEY KNITTING MILLS, INC., New York, N. Y. Filed Nov. 18, 1922.

The words "Superior Quality" and "Scarfs-Shawls" are disclaimed apart from the mark shown.

Particular description of goods.—Knitted Outer Garments—Namely, Knitted Scarfs, Shawls, and Sweater Coats.

Claims use since about September, 1918.

Ser. No. 172,449. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) THE TAPPAN STOVE CO., Mansfield, Ohio. Filed Nov. 23, 1922.

Particular description of goods.—Electric Ranges and Electric Stoves.

Claims use since Mar. 27, 1922.

Ser. No. 172,592. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) WALTER C. GROSSER, doing business as Grosser Mfg. Co., Cleveland, Ohio. Filed Nov. 27, 1922.

FREFLO

Particular description of goods.—Faucets, Cocks, Fittings for Metal Barrels of the Drum Type, and Metal Pipe Fittings.

Claims use since Aug. 11, 1922.

Ser. No. 172,732. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) DARLING SWEETS, INC., Chicago, Ill. Filed Dec. 1, 1922.

DARLING

Particular description of goods.—Candy.

Claims use since Oct. 18, 1922.

Ser. No. 172,862. (CLASS 28. JEWELRY AND PRECIOUS METAL WARES.) ERNST CLAR, St. Georgental, Czechoslovakia. Filed Dec. 4, 1922.

Particular description of goods.—Rhinestones and Chatons.

Claims use since 1920.

Ser. No. 172,993. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOHN T. JONES, doing business as Jones Remedy Co., Grass Valley, Calif. Filed Dec. 6, 1922.

JOAN S SIRÔP BE-LÂGE

Trade mark consists of the words "Joan's Sirôp Be-lâge."

Particular description of goods.—A Preparation for Relief of Colds, Coughs, and Kindred Irritations of the Bronchial and Respiratory System, Grippe, and Influenza.

Claims use since Jan. 9, 1922.

Ser. No. 173,612. (CLASS 39. CLOTHING.) TAUBER, LIPTON & COMPANY, INC., New York, N. Y. Filed Dec. 20, 1922.

ARMISTICE

Trade-mark consists of the word "Armistice."

Sweetheart

Trade-mark consists of the word "Sweetheart."

Particular description of goods.—Hosiery.

Claims use since 1915.

Ser. No. 174,753. (CLASS 39. CLOTHING.) RELIANCE MANUFACTURING COMPANY, Chicago, Ill. Filed Jan. 18, 1923.

In the trade-mark the rectangle and the legend "Old Faithful" are in blue, the diamond-shaped figure is in red, and the broken lines between the diamond-shaped figure and the rectangle are blue.

Particular description of goods.—Men's Work Shirts.

Claims use since Feb. 16, 1922.

Ser. No. 174,757. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) JOSEPH O. TANEYHILL, New York, N. Y. Filed Jan. 18, 1923.

Particular description of goods.—Crystallized and Preserved Ginger, Chutney, Honey, Preserved Kumquats, and Glacé Fruits.

Claims use since Dec. 28, 1922.

Ser. No. 174,894. (CLASS 39. CLOTHING.) JOHN DAVID, New York, N. Y. Filed Jan. 22, 1923.

The Nonchalant

Particular description of goods.—Men's Dress Suits, Tuxedo Suits, Full-Dress Suits, Dinner, Dance, and Theater Jackets, Raincoats, Overcoats, Hats, Sweaters, Coats, Trousers, Vests, and Knickerbockers.

Claims use since Nov. 1, 1922.

Ser. No. 174,902. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) WILLIAM T. JOHNS, doing business as Texas Chemical & Specialty Co., Fort Worth, Tex. Filed Jan. 22, 1923.

Particular description of goods.—Insecticide and Deodorant.

Claims use since June 8, 1922.

Ser. No. 174,943. (CLASS 39. CLOTHING.) THE STANDARD TENT & AWNING COMPANY, doing business as The Standard Garment Company, Toledo, Ohio. Filed Jan. 22, 1923.

GREAT LAKES

Particular description of goods.—Men's Working Pants, Overalls, Jumpers, and Work Shirts and Children's Overalls and Rompers.

Claims use since about Jan. 1, 1919.

Ser. No. 174,979. (CLASS 39. CLOTHING.) SCHOLDERER & AUG, INC., New York, N. Y. Filed Jan. 23, 1923.

Stately Clothes

No claim is made to the exclusive use of the word "Clothes" apart from the mark shown.

Particular description of goods.—Men's and Young Men's Suits and Overcoats.

Claims use since December, 1922.

Ser. No. 175,063. (CLASS 39. CLOTHING.) BLUE-RIBBON KNITTING MILLS, INC., Waltham, Mass. Filed Jan. 25, 1923.

Blue Ribbon

Particular description of goods.—Knitted Bathing Suits.

Claims use since Apr. 7, 1922.

Ser. No. 175,195. (CLASS 39. CLOTHING.) HERMAN B. HOFFMAN, New York, N. Y. Filed Jan. 27, 1923.

Teddycoat

Particular description of goods.—Women's Undergarments, the Same Being Combinations of Petticoat and Envelope Chemise of Cotton Textile Fabric, Silk Textile Fabric, Near-Silk Textile Fabric, Silk Knitted Fabric, and Near-Silk Knitted Fabric.

Claims use since Jan. 12, 1923.

Ser. No. 175,211. (CLASS 39. CLOTHING.) THE POL-LAK BROS. COMPANY, Fort Wayne, Ind. Filed Jan. 27, 1923.

The portrait on the drawing is fanciful.

Particular description of goods.—Dresses and Waists.

Claims use since Dec. 5, 1922.

Ser. No. 175,225. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) THE T-N-T SPARK PLUG COMPANY, Cleveland, Ohio. Filed Jan. 27, 1923.

T-N-T

Particular description of goods.—Spark Plugs.

Claims use since Apr. 15, 1922.

Ser. No. 175,287. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) WAILES-PLATTER GROCER CO., Fort Worth, Tex. Filed Jan. 26, 1923.

Particular description of goods.—Canned Goods—Name-ly, Peaches, Egg Plums, Black Cherries, Black Raspberries, Red Raspberries, Golden Wax Beans, Sugar Corn, Stringless Beans, Apple Butter, Tunny, Spinach, Pine-apple, Succotash, Red Kidney Beans, Oysters, Pears, Grapes, Pitted Red Cherries, Strawberries, Apricots, Lima Beans, Pork and Beans, Baked Beans, Asparagus Tips, Okra, Soup, Vegetables for Soup, Shrimp, Green Gage Plums, Royal Anne Cherries, Gooseberries, Blackberries, Okra and Tomatoes, Boiled Cabbage, Beets, Asparagus, Peas, Pumpkin, Tomatoes, Salmon, and Lunch Peas; Bottled Goods—Namely, Pepper Sauce, Maple Sirup, Salad Dressing, Olives, Ripe Olives, Vinegar, and Catch-

up; Packaged Goods—Namely Mince-meat, Rolled Oats, Chocolate, Lemon Peel, Tea, Raisins, Coffee, Hominy, Orange Peel, Currants, Coconut, Citron, and Potted Meat with Cereal (Used as a Binder); Sorghum, and Fruit Jam, Fruit Jelly, Fruit Preserves, Preserved Figs, and Peanut Butter in Jars and Glasses.

Claims use since 1885.

Ser. No. 175,298. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) BONNIE ROLAND CASWELL, Wilmington, Del. Filed Jan. 30, 1923.

Motor Saltz

Particular description of goods.—Motor Saltz (a Motor Energizer).

Claims use since Nov. 1, 1922.

Ser. No. 175,344. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) CHADWICK-BOSTON LEAD COMPANY, Boston, Mass. Filed Jan. 31, 1923.

REISSUES.

JULY 10, 1923.

15,644. LINE SWITCH. JOHN N. REYNOLDS, Greenwich, Conn., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 7, 1921. Serial No. 475,827. Original No. 1,306,124, dated June 10, 1919, Serial No. 127,944, filed Oct. 26, 1916. 17 Claims. (Cl. 179—27.5.)

1. In a switching mechanism, switch bars, cooperating sets of contacts on said bars vertically and horizontally separated from each other, and means for moving one of said bars, bodily, at right angles to and in the direction of its length in a continuous movement upon the arc of a circle.

15,645. VIBRATION DAMPING DEVICE. MILTON TIBBETTS, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 15, 1921. Serial No. 522,700. Original No. 1,325,057, dated Dec. 16, 1919, Serial No. 30,770, filed May 27, 1915. 18 Claims. (Cl. 74—6.)

1. In a device of the class described, in combination, an inner member, an outer relatively rotatable inertia member, friction disks between said members, and means for yieldingly separating said disks to form a frictional driving connection between the members.

15,646. POCKET FOR WEARING APPAREL. CHARLES R. WOOD, Fargo, N. Dak. Filed Feb. 28, 1923. Serial No. 621,963. Original No. 1,431,275, dated Oct. 10, 1922, Serial No. 527,635, filed Jan. 7, 1922. 4 Claims. (Cl. 2—15.)

1. The combination with a pocket having an opening and two pieces of material secured together and to the pocket at the edges of the opening forming a loss preventing apron extending into the pocket from the open-

ing, of flexible connections between the extreme inner end of the apron and the body of the pocket permitting

complete separation of the apron from the walls of the pocket, preventing withdrawal of the inner end of the apron through the pocket opening and maintaining the inner end edges of the apron stretched and in contact-ing relation.

15,647. RULE POCKET. CHARLES R. WOOD, Fargo, N. Dak. Filed Feb. 28, 1923. Serial No. 621,964. Original No. 1,407,827, dated Feb. 28, 1922, Serial No. 412,764, filed Sept. 25, 1920. 16 Claims. (Cl. 2—15.)

1. In a rule pocket, a portion of a garment, a piece of fabric secured thereto to form a pocket, the piece of fabric having formed therein intermediate its side edges a substantially vertically extending elongated opening, and a cover piece secured along the top, bottom and one vertical edge thereof to said piece of fabric, the free edge of said cover piece extending over and forming a flap for said opening, and a portion bent back from said free edge and secured to the fabric piece adjacent the secured vertical edge of said opening next adjacent the secured vertical edge of such cover.

15,648. PROCESS OF STERILIZING CHEESE. ELMER ELLSWORTH ELDRIDGE, Zeeland, Mich., assignor to Phenix Cheese Company, New York, N. Y., a Corporation of New York. Filed Jan. 27, 1923. Serial No. 615,368. Original No. 1,374,141, dated Apr. 5, 1921, Serial No. 326,038, filed Sept. 24, 1919. 13 Claims. (Cl. 99—1.)

9. As an article of manufacture, cheese containing a salt of phosphoric acid and sterilized.

12. The method of preventing disintegration of cheese when the latter is heated to a temperature above that at which the butter fat and casein would normally separate, which consists in first comminuting the cheese, adding thereto a small percentage of sodium phosphate, heating the mass, and stirring the same during said heating, the heating being continued until there is produced a homogeneous body capable, while heated, of flowing to assume the shape of a container.

15,649. VEHICLE-TOWING MECHANISM. SAMUEL E. LAWRENCE, Saybrook, Ill. Filed Mar. 4, 1920. Serial No. 363,323. Original No. 1,307,781, dated June 24, 1919, Serial No. 276,397, filed Feb. 11, 1919. 6 Claims. (Cl. 280—33.44.)

1. A vehicle towing device comprising a bar and a flexible chain or cable having one of their ends adjustably connected to the rear end of a towing vehicle, their other ends connected to two parallel disposed vehicles to be towed in parallel relation to each other, pivoted bars pivotally connected to the tongues of the vehicles and adjustably connected to the first mentioned bar so that the tongues of the vehicles will be turned when the towing vehicle turns to either side.

15,650. GOVERNING DEVICE FOR INTERNAL-COMBUSTION ENGINES. EDWARD MOORE, Newark, N. J., assignor to Splitdorf Electrical Company, Newark, N. J. Filed July 7, 1921. Serial No. 483,057. Original No. 1,363,745, dated Dec. 28, 1920, Serial No. 301,563, filed June 3, 1919. 17 Claims. (Cl. 264—16.)

1. In a governing device the combination of, a two part casing having central openings in each part, a driving member positioned within the central opening of one part, a driven member positioned within the opening of the other part, studs fastened to that part of said casing enclosing the driven member, bearing bushings carried by the other part of said casing, centrifugally operated members carried on said studs, links connecting said centrifugally operated members to said driven member, centrifugally operated members carried by said bushings, links connecting said last mentioned centrifugally operated members to said driving member, resilient means acting on said centrifugally operated members to regulate their operation, said studs passing through said bearing bushings and means for engaging said studs to hold the two parts of said casing and inclosed mechanism in operative relationship.

15,651. FLUID MEASURING AND INDICATING MECHANISM. ADOLPH STUBER, Rochester, N. Y. Filed July 11, 1922. Serial No. 574,296. Original application filed Oct. 7, 1916, Serial No. 124,220. Renewed Dec. 19, 1919, Serial No. 346,174. Original No. 1,355,183, dated Oct. 12, 1920. 11 Claims. (Cl. 235—1.)

1. In combination, an indicator, means including an actuating member and a rotatable member for driving said indicator from a predetermined starting point, said

rotatable member being adapted to adjust said actuating member, means for restoring said members to said starting point, locking devices normally engaging the actuating member and the indicator, and a locking device for the rotatable member which is normally disengaged

therefrom, a periodically operated release means arranged to disconnect the driving means and the normally engaged locking devices and to cause the engagement of the last mentioned locking device with the rotatable member, and means for moving the indicator relatively to its actuator when it is unlocked.

15,652. OPERATOR'S OUTFIT FOR ELECTRIC WELDING. ERNST WOLTMANN, New York, N. Y. Filed Dec. 31, 1919. Serial No. 348,682. Original No. 1,284,529, dated Nov. 12, 1918, Serial No. 25,179, filed May 1, 1915. 83 Claims. (Cl. 219—8.)

1. An electric welder comprising, with means for supplying electricity thereto and means for operating the welder, welding terminals connected to said means for supplying electricity and operatively supported and providing an electrode, terminal means connected to said means for supplying electricity and attachable to the work and providing an electrode, means for moving said welding terminal means to the work when said attachable terminal means is electrically connected to the work, and means for moving said welding terminal means away from the work.

DESIGNS.

JULY 10, 1923.

62,630. LIGHTING-FIXTURE PART. PERCY I. ANSORGE, Brooklyn, N. Y. Filed Aug. 8, 1922. Serial No. 3,327. Term of patent 7 years.

The ornamental design for a lighting fixture part as shown and described.

62,631. BASKET. ALFRED J. FLAUDER, Bridgeport, Conn., assignor to The Weidlich Bros. Mfg. Co., Inc., Bridgeport, Conn., a Corporation of Connecticut. Filed Sept. 13, 1922. Serial No. 3,714. Term of patent 7 years.

The ornamental design for a basket substantially as shown.

312 O. G.—17

62,632. PLATE FOR LIGHTING FIXTURES. HAMILTON T. HOWELL, New York, N. Y., assignor to Alfred Vester Sons, Inc., Providence, R. I., a Corporation of Rhode Island. Filed Aug. 28, 1922. Serial No. 3,579. Term of patent 14 years.

The ornamental design for a plate for lighting fixtures, as shown.

62,633. DISPLAY STAND. JOHN C. HUNTER, Cincinnati, Ohio, assignor to Jacob Meerse, Cincinnati, Ohio. Filed Oct. 3, 1922. Serial No. 3,872. Term of patent 14 years.

The ornamental design for a display stand, substantially as shown.

249

62,634. BRUSH. EVELYN VAN NORMAN KRIEHN, New York, N. Y. Filed May 1, 1922. Serial No. 2,024. Term of patent 14 years.

The ornamental design for a brush as shown.

62,635. LIGHTING-FIXTURE PAN. NORMAN LIPSKY, New York, N. Y., assignor to Henry Hyman & Company, Inc., a Corporation of New York. Filed July 8, 1922. Serial No. 2,988. Term of patent 7 years.

The ornamental design for a lighting fixture pan as shown.

62,636. LIGHTING-FIXTURE PAN. NORMAN LIPSKY, New York, N. Y., assignor to Henry Hyman & Company, Inc., a Corporation of New York. Filed July 8, 1922. Serial No. 2,989. Term of patent 7 years.

The ornamental design for a lighting fixture pan as shown.

62,637. LIGHTING-FIXTURE BAND. NORMAN LIPSKY, New York, N. Y., assignor to Henry Hyman & Company, Inc., a Corporation of New York. Filed July 8, 1922. Serial No. 2,990. Term of patent 7 years.

The ornamental design for a lighting fixture band as shown.

62,638. LIGHTING-FIXTURE BODY. NORMAN LIPSKY, New York, N. Y., assignor to Henry Hyman & Company, Inc., a Corporation of New York. Filed July 8, 1922. Serial No. 2,991. Term of patent 7 years.

The ornamental design for a lighting fixture body as shown.

62,639. LIGHTING-FIXTURE ARM. NORMAN LIPSKY, New York, N. Y., assignor to Henry Hyman & Company, Inc., a Corporation of New York. Filed July 8, 1922. Serial No. 2,995. Term of patent 7 years.

The ornamental design for a lighting fixture arm as shown.

62,640. CONTAINER FOR FROZEN Dainties. FRANK E. MAYOL, Salt Lake City, Utah. Filed June 19, 1922. Serial No. 2,744. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a container for frozen dainties, as shown.

62,641. ENTRANCE ARCH. WILLIAM W. PAINE, Palms, Calif. Filed Mar. 1, 1922. Serial No. 961. Term of patent $3\frac{1}{2}$ years.

The ornamental design for an entrance arch, as shown.

62,642. LIGHTING FIXTURE. ROSCOE C. PFLEAGER, Cleveland, Ohio, assignor to Benjamin F. Klein, Cleveland, Ohio. Filed Aug. 14, 1922. Serial No. 3,374. Term of patent 7 years.

The ornamental design for a lighting fixture, substantially as shown.

62,643. LIGHTING FIXTURE. ROSCOE C. PFLEAGER, Cleveland, Ohio, assignor to Benjamin F. Klein, Cleveland, Ohio. Filed Aug. 14, 1922. Serial No. 3,375. Term of patent 7 years.

The ornamental design for a lighting fixture, substantially as shown.

62,644. LIGHTING FIXTURE. ROSCOE C. PFLEAGER, Cleveland, Ohio, assignor to Benjamin F. Klein, Cleveland, Ohio. Filed Aug. 14, 1922. Serial No. 3,377. Term of patent 7 years.

The ornamental design for a lighting fixture, substantially as shown.

62,645. LIGHTING FIXTURE. ROSCOE C. PFLEAGER, Cleveland, Ohio., assignor to Benjamin F. Klein, Cleveland, Ohio. Filed Aug. 14, 1922. Serial No. 3,378. Term of patent 7 years.

The ornamental design for a lighting fixture, substantially as shown.

62,646. ARM FOR LIGHTING FIXTURES. MAX F. ROSACKER, Mount Penn, Pa. Filed Oct. 11, 1922. Serial No. 3,940. Term of patent 3½ years.

The ornamental design for an arm for lighting fixtures, as shown.

62,647. MESH BAG. HARRY BRADLEY ROWAN, North Attleboro, Mass., assignor to Whiting & Davis Company, a Corporation of Massachusetts. Filed July 28, 1922. Serial No. 3,230. Term of patent 7 years.

The ornamental design for a mesh bag as shown.

62,648. CATCH FOR NECKLACES. HARRY C. SCHICK, Newark, N. J. Filed Feb. 7, 1923. Serial No. 5,101. Term of patent 3½ years.

The ornamental design for a catch for necklaces, as shown.

62,649. CATCH FOR NECKLACES. HARRY C. SCHICK, Newark, N. J. Filed Feb. 7, 1923. Serial No. 5,103. Term of patent 3½ years.

The ornamental design for a catch for necklaces, as shown.

62,650. CATCH FOR NECKLACES. HARRY C. SCHICK, Newark, N. J. Filed Feb. 7, 1923. Serial No. 5,104. Term of patent 3½ years.

The ornamental design for a catch for necklaces, as shown.

62,651. CATCH FOR NECKLACES. HARRY C. SCHICK, Newark, N. J. Filed Feb. 7, 1923. Serial No. 5,105. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a catch for necklaces, as shown.

62,652. MACHINE EMBROIDERY. ERNST OTTO SCHÜLER, Falkenstein, Germany, assignor to Perlmann, Schal & Stern, New York, N. Y., a Copartnership composed of Nicholas Perlmann, George Schal, and Herman Stern. Filed July 15, 1922. Serial No. 3,090. Term of patent $3\frac{1}{2}$ years.

The ornamental design for machine embroidery as shown.

62,653. LACE. THOMAS HENRY SMEDLEY, Long Eaton, England, assignor to Richmond Lace Works, Alton, R. I., a Corporation of Maine. Filed Nov. 29, 1922. Serial No. 4,450 $\frac{1}{2}$. Term of patent $3\frac{1}{2}$ years.

The ornamental design for lace, as shown.

62,654. DISH. JULES H. VENON, New York, N. Y. Filed Jan. 6, 1922. Serial No. 63. Term of patent 7 years.

The ornamental design for a dish, as shown.

62,655. DISH. JULES H. VENON, New York, N. Y. Filed Jan. 6, 1922. Serial No. 64. Term of patent 7 years.

The ornamental design for a dish, as shown.

62,656. DISH. JULES H. VENON, New York, N. Y. Filed Jan. 6, 1922. Serial No. 65. Term of patent 7 years.

The ornamental design for dish, as shown.

62,658. DISH. JULES H. VENON, New York, N. Y. Filed Feb. 25, 1922. Serial No. 892. Term of patent 7 years.

The ornamental design for a dish, as shown.

62,657. DISH. JULES H. VENON, New York, N. Y. Filed Feb. 25, 1922. Serial No. 891. Term of patent 7 years.

The ornamental design for a dish, as shown.

62,659. RUBBER TIRE. CHARLES H. WHEELER, East Palestine, Ohio. Filed Oct. 20, 1921. Serial No. 509,184. Term of patent 7 years.

The ornamental design for a rubber tire, as shown.

PATENTS

GRANTED JULY 10, 1923.

- 1,461,018. METHOD OF MAKING TUBULAR BODIES. PERCY A. E. ARMSTRONG, Boudonville, N. Y. Filed Feb. 3, 1919. Serial No. 274,638. 2 Claims. (Cl. 29—160.4.)

1. The process of making tubular bodies such as hollow drill rod and the like which consists in casting an ingot around a core, treating the ingot and core for elongation and reduction of cross-section, as by rolling and removing the core.

- 1,461,019. DOORBELL. JOHN ALEXANDER BAGINLEY, Hoquiam, Wash. Filed Apr. 4, 1922. Serial No. 549,541. 1 Claim. (Cl. 116—153.)

In combination, a pair of hollow door knobs, each having a stem projection from the inner side thereof and each stem being provided with a longitudinal bore communicating with the interior of the associated knob, a spindle having its ends disposed within the stems of said knobs, said spindle being split longitudinally to provide a plurality of sections, one of said sections being wedge-shaped and the sections adjacent to the wedge section each having a face adapted to co-operate with the wedge section for enlarging said spindle when the wedge-shaped section is pressed inwardly, a set screw carried by each stem adapted to be manipulated for pressing said wedge-shaped spindle section inwardly and thereby clamp the ends of the spindle within the door knob stems, and said spindle sections having their inner edges recessed to provide a bore extending longitudinally and centrally of the spindle, a shaft extending through said bore and said shaft having one end disposed within a door knob

and its other end extending through the associated door knob and carrying means whereby the shaft may be manually rotated, and a bell supported within the other door knob and adapted to be operated by the operation of said spindle.

- 1,461,020. HOBBYHORSE TOY. LOUIS D. BARR, Tacoma, Wash. Filed Feb. 28, 1922. Serial No. 539,977. 1 Claim. (Cl. 46—37.)

A device of the class described, comprising a standard having one end forming a handle, a seat mounted on the standard between the ends, an axle secured intermediate its ends to the other end of the standard, the center line of the axle and standard intersecting, and wheels mounted on the ends of the axle and spaced a substantial distance apart, whereby the weight of the user is applied to the wheels at the axes thereof between the points of engagement with the ground to prevent the device from turning over in use.

- 1,461,021. SPARE-TIRE COVER FOR AUTOMOBILES. WARWICK G. BATE, Newton Falls, Ohio. Filed Sept. 4, 1920. Serial No. 408,158. 2 Claims. (Cl. 150—54.)

1. A cover for a spare tire comprising a circular piece of material, a strip of bias cut fabric attached to the periphery of said circular portion to form a part which is adapted to be extended over and around the rear of the tire, and means carried by the free edge of said strips, for stretching said strip about the tire and for securing it against removal therefrom.

1,461,022. ADJUSTABLE METAL-TICKET CHANGER. EDWIN BECKER and ERNEST ABER, Racine, Wis. Filed Aug. 20, 1921. Serial No. 494,008. 2 Claims. (Cl. 133-5.)

1. A metal ticket changer comprising tubular ticket holding means, registering aperture ticket discharging means, and a telescoping member for regulating the number of tickets to be discharged through the registering apertures.

1,461,023. WINDOW CONSTRUCTION. PAUL BECKER, East Cleveland, Ohio. Filed Mar. 13, 1922. Serial No. 543,232. 4 Claims. (Cl. 20-52.4.)

1. In a window construction, a window frame having upper and lower sashes slidable vertically in guideways formed by the frame, weather stripping carried by the frame and engaged by said sashes, sections of the weather stripping engaged by upright portions of the sashes on one side of the frame being removable, and said frame having on the side upon which the removable weather stripping is mounted molding strips with movable portions normally forming the inner walls of the upright guideways for the sashes and permitting the removal of the sashes when the removable sections of the weather stripping are removed, said sashes being movable laterally sufficiently to permit the side freed from the weather stripping and molding strips to be swung inwardly.

1,461,024. METHOD OF AND APPARATUS FOR PRODUCING WATERPROOFED RECEPTACLES. WILLIAM EVERET BENSON, Wilmington, Mass. Filed Oct. 16, 1922. Serial No. 594,775. 7 Claims. (Cl. 93-55.)

1. The method of manufacturing a waterproofed paper receptacle having a side wall and a flanged bottom

closure, consisting in adhesively coating the flange of said bottom closure while said closure is retained on a forming mandrel, in applying the side wall to said mandrel, in folding the lower edge of said side wall to pro-

vide a flange enclosing said bottom closure flange, and in internally expanding the bottom closure flange against the side wall flange to cause said flanges to adhere to each other.

1,461,025. AIR-BRAKE MECHANISM. LESLIE G. BLACK, Sioux City, Iowa. Filed Mar. 30, 1921. Serial No. 457,022. 12 Claims. (Cl. 303-78.)

1. A brake system embodying a source of fluid pressure, brake mechanism including a fluid-pressure passage, an exhaust passage, valve mechanism for placing said passages in and out of intercommunication, a fluid-pressure-retaining valve, a communicating passage between the exhaust passage and the retaining valve, and means for controlling the retaining valve, including a valve chamber communicating with said communicating passage and having an exhaust opening, valve mechanism within said chamber, actuated from said source of pressure to close the exhaust opening when the pressure in said source is subnormal, and actuated by pressure from the communicating passage to open the exhaust opening when the pressure in said source is normal.

- 1,461,026. SWIMMING-POOL CONSTRUCTION. JOHN FRANCIS BOORAEM, Greenwich, Conn. Filed Mar. 8, 1922. Serial No. 542,099. 12 Claims. (Cl. 4—2.)

1. A swimming pool construction comprising an overflow gutter and a trench extending longitudinally of the margin of the pool in spaced relation to each other and transverse passages affording direct communication between said gutter and trench.

- 1,461,027. TRACTOR. JAMES W. BROCKSON, Middletown, Del., assignor of one-half to P. L. McWhorter, Middletown, Del. Filed June 8, 1921. Serial No. 475,943. 2 Claims. (Cl. 280—96.1.)

1. In a tractor for use in plowing, in combination with the front axle and wheels, means to have one of the guiding wheels run in a line outside of the regular wheel base and at a lower level than the other wheels, said means comprising an extension piece with its outer end formed to receive the wheel steering knuckle and its inner end adapted to clamp the axle and bored intermediately to receive a bolt dropped through the king-pin hole of the axle for firmly securing the extension piece beneath said axle.

- 1,461,028. ENDLESS-TRACK VEHICLE. LEWIS K. DAVIS, Washington, D. C. Filed Mar. 20, 1923. Serial No. 626,376. 5 Claims. (Cl. 180—91.)

1. An endless track vehicle comprising a frame, endless flexible tracks carried thereby, a frame supporting member bearing on the lower run of each track and each mounted to move laterally in unison with a corresponding lateral movement of the portion of the track which it

engages, driving pulleys and idlers for the tracks, differential gearing connecting the driving pulleys and independently operable brakes therefor, the application of either brake reducing the speed of the associated pulley and correspondingly increasing the speed of the other pulley to bend laterally only the lower reach of said track between the pulley and idler and give lateral movement to the body supporting members.

- 1,461,029. SAFETY FILM REEL. LEO J. DOTY, Kansas City, Mo. Filed July 21, 1919. Serial No. 312,156. 1 Claim. (Cl. 206—59.)

A safety film reel cover comprising two members having means for embracing the edges of the heads of a film reel and having one set of ends which overlap each other hinged together, the other set of ends being adapted to overlap each other in the closed position, said members where they overlap having their inner surfaces flush with each other, and means for releasably locking together the free ends of said members, substantially as set forth.

- 1,461,030. FUEL SAVER. ALFRED EDMOND, Kearney, N. J. Filed Nov. 23, 1921. Serial No. 517,306. 3 Claims. (Cl. 126—148.)

1. A fuel saver comprising a casing formed of two members adapted to be secured side by side, a covering of refractory material, said covering comprising a lower member to surround the bottom part of the casing and an upper part to surround the upper sides and the top of the casing.

- 1,461,031. CENTRIFUGAL SEPARATOR. HARVEY FELDMEIER, Little Falls, N. Y., assignor to D. H. Burrell & Co., Inc., Little Falls, N. Y. Filed Oct. 26, 1920. Serial No. 419,652. 8 Claims. (Cl. 233—23.)

1. In a centrifugal separating machine, a bowl supporting frame comprising a hollow body and a top removably

secured thereon and forming a support for a receptacle for separated liquid, the joint between said top and body

being circular and said top having a circular seat for said receptacle eccentric to said circular joint.

- 1,461,032. CENTER PUNCH. ALEXANDER FORSYTH, Westboro, Mass., assignor to Arthur M. Fraser, Westboro, Mass. Filed Oct. 27, 1920. Serial No. 420,009. 1 Claim. (Cl. 81—1.)

A center punch embodying therein a member provided with a point at its lower extremity and also provided with a shoulder formed thereon, a shank located at the upper extremity of said member and having screw-threaded engagement therewith, a head formed integral with said shank at the upper end thereof and provided with a recess therein constituting a finger rest, a striker slidably mounted upon said shank and a spring surrounding said shank between said head and said striker and adapted to force said striker against said shoulder.

- 1,461,033. SWIVELED COUPLING. ALFRED S. FRIEZE, Fossil, Oreg. Filed Sept. 19, 1919. Serial No. 324,789. 1 Claim. (Cl. 24—123.)

In a coupling of the character described, the combination with a bar member having a slotted end and an arm diagonally slotted and pivoted to said bar and adapted to be locked parallel to said bar and capable of being swung upwardly on its pivot, of an engaging slide block having interlocking portions with said diagonal slot in the pivot bar, and to cooperate with the bar when the arm is locked in a parallel position, bifurcated members

pivotally mounted on said bar and on said slide block, and cable attaching hooks connected to said bifurcated members for a swivel movement permitting a free rotation of said hooks.

- 1,461,034. ACETYLENE-GAS BURNER. WILLIAM J. FRISBIE, Chicago, Ill., assignor to Justrite Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 8, 1922. Serial No. 535,025. 1 Claim. (Cl. 158—99.)

In a gas burner, the combination of a body having an annular gas chamber therein, an extension on said body providing a gas inlet passageway to said chamber, the outer and inner sides of said passageway being tangential respectively with the outer and inner sides of said chamber whereby gas will flow directly tangentially from said passageway into said chamber, and gas combustion outlets from said chamber.

- 1,461,035. DOUBLE-DOOR CONSTRUCTION FOR RAILWAY CARS. GARTH G. GILPIN, Riverside, Ill., assignor to Walter P. Murphy, New York, N. Y. Filed May 29, 1920. Serial No. 385,102. 28 Claims. (Cl. 20—22.)

2. The combination with a railway car having a door opening and a pair of doors to close said opening, of means on one of said doors adapted to receive and support a bodily removable upright cooperating strip.

- 1,461,036. CRUSHER ROLL. THOMAS A. HIBBINS, Wellsville, Ohio, assignor to The Stevenson Company, Wellsville, Ohio, a Corporation of Ohio. Filed Dec. 7, 1922. Serial No. 605,349. 3 Claims. (Cl. 83—12.)

1. A crusher roll structure for crushing machines comprising the roll body, longitudinal rows of long teeth on said body and shorter teeth between said long teeth in said rows, a channel in front of each row, a wearing plate of hard material seated in said channel in front of each long tooth and having extensions engaging in front of part of the adjacent shorter teeth, and means for detachably securing each plate to the corresponding long tooth.

1,461,037. DRILLING TOOL. WILLIAM R. HOWARD, Washington, D. C. Filed Aug. 3, 1918, Serial No. 248,114. Renewed Jan. 19, 1923. 6 Claims. (Cl. 255—4.)

1. In a drilling apparatus, the combination with a drill stem, of a hollow jacket member secured to the lower end of the drill stem, a motor enclosed in said jacket, means for controlling the operation of said motor, from the ground, a cutting tool projecting into said jacket, operative connections between the motor and cutting tool for rotating the latter, and cutting bits carried by the tool.

1,461,038. STARTER FOR ELECTRICAL TRANSLATING DEVICES. FREDERICK G. KEYES, Hoboken, N. J., assignor to Cooper Hewitt Electric Company, Hoboken, N. J., a Corporation of New Jersey. Filed July 2, 1918. Serial No. 243,012. 8 Claims. (Cl. 200—152.)

4. A circuit interrupter comprising a stationary container, terminals therein, one of which terminals is a pendulum, and a skirt surrounding the pivoted end of the pendulum.

1,461,039. REMOVABLE VALVE SEAT FOR BALL COCKS. FREELAND D. LESLIE, Milton, Mass. Filed Jan. 27, 1921. Serial No. 440,303. 5 Claims. (Cl. 137—104.)

5. In a device of the class described, a tubular member provided with a valve seat at one end and having

formed integral therewith a plurality of inwardly extending ribs alternately disposed on the opposite sides of

said member with their inner ends at the axis of said tubular member.

1,461,040. BUTTONHOLE-SEWING MACHINE. ARTHUR E. LINDNER, Brooklyn, N. Y., assignor to The L. and H. Special Machine Co., Inc., New York, N. Y., a Corporation of New York. Filed Apr. 27, 1921. Serial No. 464,850. 2 Claims. (Cl. 112—70.)

1. In a machine for sewing around the edges of button-holes of key hole shape, in combination with a needle mounted to reciprocate in a constant vertical position, superposed plates, means for holding the material upon the uppermost plate against movement with respect thereto, means for shifting said plates laterally as a unit and additional means operating simultaneously with the first named means to impart a longitudinal shifting movement to the uppermost plate with respect to the lower plate and thereby vary the position of the button-hole in the material with respect to the line of movement of the needle to progressively form a line of stitching around the edge of the button-hole with the individual stitches extending substantially at right angles thereto; said laterally and longitudinally shifting means comprising disk cams in fixed relation one above the other, a spring controlled pivoted arm provided with a dependent bracket carrying a roller engaging the periphery of the primary disk cam, a bed supported slide block provided with a dependant boss engaging the periphery of the secondary disk cam and a pin dependant from said top plate and engaging a groove in the bottom plate and a channel in said block disposed at right angles to said groove, and a spring for holding said boss in contact with said secondary cam.

1,461,041. FLANGING MACHINE. HUGH McCABE, Lawrence, Mass. Filed July 31, 1922. Serial No. 578,589. 2 Claims. (Cl. 153—16.)

1. A breaker piece for a machine having a flat face to receive the working pressure of a part thereon, and an opposed inclined face supported by another part of the machine correspondingly inclined, the angle of inclination of the faces being such that the coefficient of friction between the inclined faces will be substantially ample to resist the working strains of the machine, and slight means for holding the inclined piece in position.

1,461,042. AUTOMOTIVE BRAKE. WILLIAM C. McWHIRTER, Wilkesburg, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed June 29, 1922. Serial No. 571,649. 4 Claims. (Cl. 303—85.)

1. In a fluid pressure brake, for automotive vehicles, the combination with a service and an emergency reservoir normally in communication and means for cutting off communication from the emergency reservoir to the service reservoir upon a predetermined reduction in pressure in the service reservoir, of a service valve device for normally controlling the supply of fluid from the service reservoir to effect an application of the brakes and an emergency valve device for controlling the supply of fluid from the emergency reservoir to effect an application of the brakes.

1,461,043. FISHING REEL. WILLIAM C. MOLL, Brooklyn, N. Y. Filed May 7, 1921. Serial No. 467,561. 2 Claims. (Cl. 242—84.6.)

1. A fishing reel comprising a head adapted to be carried by the fishing rod, a relatively short spindle projecting from the head, a reel body received against said head and having an axial opening for the passage of said spindle, said reel body having at its outer side a relatively deep recess communicating with the opening

and receiving the spindle end, a removable plate closing the mouth of the recess and having an elongated socket projecting wholly inwardly of said plate and positioned to receive and support the end of the relatively short spindle, an elongated pivot carried by the plate at one side of said socket and projecting into the recess farther than the end of said socket, a detent swingingly secured

on said pivot and adapted to interlock with the spindle, an elongated operated pin projecting through said plate and into the recess at the opposite side of said socket, said pin being connected with the free end of said detent, said plate being slotted to admit of the movement of the detent, and a spring associated with said pin and with said plate for normally urging the detent into the interlocked position.

1,461,044. PROTECTING DEVICE FOR LATCH PARTS. LEON OTTINGER, New York, N. Y. Filed Oct. 22, 1920. Serial No. 418,706. 7 Claims. (Cl. 70—16.)

2. A protecting device comprising a hollow casing shaped to the general configuration of the projecting part of a latch bolt when in normal projected position and extending about on all sides and on the end of the latch bolt, said casing adapted to frictionally engage the projecting portion of the bolt to hold the same against creeping or being accidentally moved away from the lock casing.

1,461,045. AIR SEPARATOR. JENS A. PAASCHE, Chicago, Ill. Filed Oct. 24, 1918. Serial No. 259,539. 10 Claims. (Cl. 183—66.)

1. An air separator comprising, in combination, two aligned upright tubes, an intermediate head closing the

adjacent ends of both tubes, heads closing the remote ends of said tubes, said intermediate head having an air inlet opening into the lower tube and having a drain cock opening from the upper tube, the uppermost head having an air outlet and the lowermost head having a drain cock, means in the lower tube for condensing and collecting moisture, and additional collecting means in the upper tube.

1,461,046. METHOD OF RESTORING POLES. FREDERICK W. PATTERSON, Pittsburgh, Pa. Filed May 17, 1919. Serial No. 297,939. 4 Claims. (Cl. 20—100.)

1. In a method for restoring the butts of poles, raising the pole vertically to a point where the decayed portion of said pole is exposed above the surface of the ground, severing the stump and removing the said decayed portion; removing the pole laterally away from its original position, and dressing the ends of the pole and stump to fit a metal tube; lowering the stump to its first position, adjusting the metal tube on the end of said stump and partly filling the tube with tamped earth and cement grout; and returning and lowering the pole to a position within the metal tube thereby displacing some of the cement grout, so that when the grout "sets" a secure bond will be established between the stump, the tube and the pole itself.

1,461,047. ADVERTISING SIGN. JOSEPH L. RAY, South Orange, N. J. Filed May 25, 1920. Serial No. 384,103. 2 Claims. (Cl. 40—76.)

1. An advertising sign comprising a plurality of parallel rotatable prismatic sections, means to support the sections with one set of faces lying in a plane and the proximate edges of such faces in juxtaposition, means to rotate said sections periodically in predetermined sequence with respect to each other to bring another set of faces into said plane, and means to vary the sequential rotation of said sections to produce a fade-away effect.

1,461,048. WINDMILL WHEEL. NEWMAN A. ROMAN, Deer Trail, Colo., assignor of one-fourth to Leslie J. McKay and one-fourth to Harry Hess, both of Deer Trail, Colo. Filed Apr. 13, 1922. Serial No. 552,174. 1 Claim. (Cl. 170—68.)

A windmill wheel comprising a hub member two annular members of different diameters concentric with the

hub and surrounding the same, a plurality of angularly spaced sails pivotally mounted between said annular members, a ring pivotally connected at spaced points to one edge of each sail, a spring secured to said ring and to a stationary portion of the wheel frame and adapted to normally hold the sails at a predetermined angle with respect to the plane of rotation, a pair of diametrically arranged bars, a weight slidably secured to each arm, a spring surrounding each of said bars, an adjustable

abutment for the outer end of the spring, said springs being adapted to yieldingly resist the tendency of said weights to move outwardly due to centrifugal force, a pulley on said bars, a cable passing around said pulley and having one end connected to the ring and the other to the weight whereby the outward movements of the weights will rotate the ring and alter the angle of the sails in accordance with the requirements of the load and the velocity of the wind.

1,461,049. DUSTPROOF AND MOTHPROOF BAG. GEORGE ROTTMAN, New York, N. Y., assignor to Roseth Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Oct. 9, 1920, Serial No. 415,925. Renewed May 7, 1923. 3 Claims. (Cl. 229—53.)

1. A dust-proof bag comprising a body portion and a top closure portion which extends above said body portion when the bag is open, said portions being so creased that the entire bag can be folded flat, means for keeping the top closure portion in a closed and folded position, and flaps secured to the sides of the said bag in a hinge-like manner below the mouth of said bag, the said flaps being creased so that they can be folded when the bag is collapsed into the flat condition, the said flaps being capable of being extended into positions substantially perpendicular to the sides of the said bag so as to maintain the said body in the extended position.

1,461,050. AUTOMATIC STOP FOR PHONOGRAPHS. GEORGE L. SCHUETZ, Zionsville, Ind. Filed Sept. 16, 1921. Serial No. 501,152. 10 Claims. (Cl. 192—118.)

1. A device for arresting the playing of a phonograph record, including a sound reproducing medium adapted to engage said record, engaging and stopping means for arresting the movement of said record, an endless

traveling member arranged to travel at a speed equal to the movement of said medium, and means on said

member for causing the actuation of said stopping means upon a variation of speed between said member and sound reproducing medium.

1,461,051. LAST. CLINTON M. SEARL, Portsmouth, Ohio, assignor to The Vulcan Last Company, Portsmouth, Ohio, a Corporation of Ohio. Filed Apr. 14, 1922. Serial No. 552,612. 7 Claims. (Cl. 12—136.)

1. A last divided transversely into a toe part and a heel part, a link, a pin for preventing displacement of one end of said link with respect to one last part, projections on the opposite end of said link, and a pair of pins cooperating with said projections for preventing displacement of this end of the link, one of said pair of pins cooperating with one projection when the last is extended and the other pin cooperating with the other projection when the last is collapsed.

1,461,052. HOIST. WILLIAM E. SIMPSON, Detroit, Mich. Filed Aug. 27, 1920. Serial No. 406,303. 5 Claims. (Cl. 242—117.)

1. In a hoist, the combination with a winding drum, of a flexible hoisting element, a spiral groove in said drum adapted to receive a plurality of convolutions of said element and terminating in a recess, and an enlarged portion on said flexible element adapted to engage

in said recess, said enlarged portion being insertable into said recess from the exterior of said drum and being adapted to be secured therein by a convolution of said flexible element in said groove.

1,461,053. CULTIVATOR HARROW. OTTO V. VANICEK, Temple, Tex. Filed Oct. 10, 1921. Serial No. 506,691. 2 Claims. (Cl. 97—8.)

1. In combination with a cultivator, a plurality of downwardly extending diverging supporting members arranged to be secured to the beam of the cultivator, horizontally disposed arms pivotally secured to the lower end of the said supporting members and extending rearwardly therefrom, downwardly extending arms pivotally secured to the outer ends of the first mentioned arms, the said last mentioned arms being bent at an angle to the first mentioned arms, tooth carrying members secured to the lower ends of said last mentioned arms and extending inwardly and rearwardly toward each other.

1,461,054. PROPELLER. EDWARD VOGEL, West Alexandria, Ohio. Filed Mar. 2, 1922. Serial No. 540,621. 3 Claims. (Cl. 170—28.)

1. In combination, a propeller, a shaft upon which the propeller is mounted, an opening in either end of the propeller in the body thereof, a shutter on either end thereof to close said opening, means mounted upon the propeller shaft and rotating therewith to automatically operate the shutter intermittently to opened and closed position at different points in the revolution of the propeller, said operating means being adapted to rotate with said shaft, and means located adjacent the propeller shaft to cause the operating means to rock.

1,461,055. CHECK-PROTECTING MEANS. GEORGE L. WALKER, Moorhead, Minn. Filed Mar. 20, 1922. Serial No. 545,011. 1 Claim. (Cl. 283—12.)

A check book holder having a pocket adapted to slidably receive a check book, and a cutting device at the opening

of the pocket, one wall of said pocket having a transverse slot adjacent to said cutting device, and said cutting

device having a rearwardly projecting edge extending slightly into said slot.

1,461,056. SIGNALING APPARATUS. WILLIAM L. WALKER, New York, N. Y., assignor to Walker Signal and Equipment Corporation, New York, N. Y., a Corporation of Delaware. Filed June 22, 1917. Serial No. 176,299. 20 Claims. (Cl. 177—386.)

14. Signaling apparatus comprising a diaphragm, a pair of opposed electrodes, and flexible means for connecting one of the electrodes to the diaphragm so that the electrode may have some movement transverse to the direction of vibration of the diaphragm.

1,461,057. TACK-PULLING DEVICE. FRANK H. WARREN, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 15, 1919. Serial No. 311,042. 17 Claims. (Cl. 12—16.)

1. A tack pulling device having, in combination, a tack pulling member, and independent means engaging the head of a tack for ejecting the tack from said member.

1,461,058. SEWING-MACHINE DRIVING MECHANISM. LOUIS WELKER, Jr., Williamsport, Pa., assignor to The New Home Sewing Machine Company, Orange, Mass., a Corporation of Massachusetts. Filed Apr. 4, 1921. Serial No. 458,182. 8 Claims. (Cl. 45—27.)

1. In combination, a sewing machine stand having a table top, a sewing machine having a driving pulley, means supporting said machine for movement from an operative position above the table to an inoperative position

below the same, a driving wheel and support therefor below the table, the driving wheel being laterally adjustable on its support from a driving position in alignment with the machine pulley when the machine is raised to

an inoperative position at one side of the path of movement of the machine pulley when the machine is being lowered, a driving connection from the driving wheel to the machine pulley, and operating means for the driving wheel.

1,461,059. RING TRAVELER. PHILIP C. WENTWORTH, Providence, R. I. Filed Apr. 21, 1922. Serial No. 555,930. 11 Claims. (Cl. 118—61.)

1. A hardened and tempered ring traveler comprising a bow and terminal horns, the tempering effect being greater in the bow portion than in the horns, and the horns having greater hardness than said bow.

1,461,060. SPACER FOR PAVING BLOCKS. WALLACE PERCY WHITNEY, Springfield, Ill. Filed July 26, 1921. Serial No. 487,580. 8 Claims. (Cl. 94—11.)

1. In combination with paving blocks, a spacer comprising a substantially U-shaped member having its leg portions slightly bent toward each other and adapted to receive a paving block therebetween and said member having its bridge portion adapted to extend from the paving block and thereby to provide a spacer for said paving block upon opposing sides thereof.

1,461,061. RAIL BOND. THOMAS HAULTON, Johnstown, Pa. Filed Sept. 15, 1919. Serial No. 323,757. 1 Claim. (Cl. 173-278.)

The combination with a pair of aligned rail sections, of a bond electrically connecting the rail sections and comprising a pair of terminal elements clasped around one edge of the base flanges of the rail sections, said elements being made of malleable metal of a low degree of conductivity and being in the form of substantially C-shaped clips having flat substantially rectangular shaped upper members and enlarged lower members disposed respectively above and below the base flanges of the rail sections, said members being relatively arranged normally at a smaller angle than the angle between the upper and lower surfaces of the base flanges of the rail sections and being spread into clasp engagement with the base flanges of the rail sections by said clips being forced upon one edge of said base flanges, the said upper members being of such a width as to extend under the heads of the rail sections and being welded only along their inner edges to the base flanges of the rail sections, whereby said clips can be easily separated from the base flanges of the rail sections by cutting them along the inner edges of their said upper members, the said lower members being provided near their inner edges with longitudinally extending openings, and a flexible conductor located entirely beneath the base flanges of the rail sections and connecting said clips and having its ends disposed in said openings and welded to said lower members, said conductor being of a metal of a comparatively high degree of conductivity.

1,461,062. WELT-BEATING MACHINE. FRED N. LA CHAPPELLE, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 15, 1921. Serial No. 461,557. 10 Claims. (Cl. 12-67.2.)

1. A welt beating machine having, in combination, an anvil, a reciprocating hammer to cooperate with the anvil to beat out a welt, and means for relatively adjusting the hammer and anvil during the operation of the machine to vary the angular relation of the working faces of the hammer and anvil.

1,461,063. TELESCOPE. MICHAEL LICHTMAN, New York, N. Y. Filed Dec. 15, 1920. Serial No. 430,819. 1 Claim. (Cl. 88-32.)

A telescope comprising inner and outer telescoping sections formed of stamped metal, an off-set flange of larger diameter formed on one end of the inner section and bent parallel to the inner surface of the outer section, said flange having a substantial length to form a bearing surface, and a ringlike flange of smaller diameter on the opposite end of the outer section to form the bearing for the inner section, the said second flange bent parallel to the outer surface of the inner section and having a substantial length to form said bearing.

1,461,064. MULTIPLEX TRANSMISSION CIRCUIT. DE LOSS K. MARTIN, Orange, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Feb. 10, 1921. Serial No. 443,930. 25 Claims. (Cl. 250-9.)

1. The method of multiplex signaling which consists in generating a plurality of carrier frequencies by modulating one frequency in accordance with another frequency, selecting certain of the resultant frequencies and modulating certain of the selected frequencies in accordance with signaling frequencies.

1,461,065. STOVE. SOLON P. MASSEY, Denver, Colo. Filed June 24, 1922. Serial No. 570,554. 4 Claims. (Cl. 126-225.)

1. In a stove, the combination of a drum, a hopper removably fitted within the drum, diametrically opposite ribs upon the hopper constituting baffles between the hopper and the drum and maintaining the hopper in

spaced relation to the drum, said ribs terminating short of the lower end of the hopper, upper and lower flues extending from the drum, and a horizontal partition within the drum extending from the wall of the drum at a point between said flues to the ribs on the hopper.

1,461,066. TOY. CALVIN C. MILLER, Summit Hill, Pa. Filed May 6, 1920. Serial No. 379,313. 2 Claims. (Cl. 46—40.)

1. In a device of the class described, the combination of a frame, a motor carried by the frame, a primary figure rockably mounted on said frame and actuated by the motor, a secondary figure rockably mounted off center on the frame so that it will be normally in a forward rocked position, and flexible means for connecting said primary figure to said secondary figure so that the former will pull the latter to a rearward position when the former is actuated by said motor.

1,461,067. APPARATUS FOR TREATING SAND AND GRAVEL. ROBERT W. MOSER, Robbinsdale, Minn. Filed Mar. 11, 1922. Serial No. 542,821. 4 Claims. (Cl. 83—59.)

1. The combination with an inclined chute, of a rotatable gravel washer discharging at the head of the chute, a grading screen at the discharge end of the chute, and means between the washer and screen for directing water toward the chute to rinse the material received thereon from the discharge end of the washer.

1,461,068. PRINTING ROLLER. THEODORE REGENSTEINER, Chicago, Ill. Filed July 29, 1922. Serial No. 578,310. 8 Claims. (Cl. 101—415.1.)

1. A printing roller of the character described comprising in combination a cylindrical core, a thin and flexible
312 O. G.—18

sheet around the core, said sheet having a continuous outer surface, and means for holding the end portions of the sheet in abutment with each other in a continuous line extending from one side edge of the sheet to the other thereof and with the abutting ends readily separable from each other and with a substantially ink tight joint.

1,461,069. RAILROAD MINE TIE AND RAIL FASTENER. THOMAS RICHARDS, Sr., Portage, Pa. Filed Apr. 17, 1922. Serial No. 553,400. 1 Claim. (Cl. 238—60.)

In combination with a railroad tie formed of a substantially channel iron construction, the tie having a substantially L-shaped slot formed therein, the transverse portion of the L-shaped slot extending across the upper face of the tie and terminating short of one side edge thereof, one end of the L-shaped slot constituting an abutment, the longitudinally extending portion of the L-shaped slot extending down through a portion of one side of the tie, a rail engaging portion carried by the tie and adapted to engage a rail, a pivotally mounted rail clamp pivotally secured to the under face of the tie and extending through the slot and being capable of being swung into and out of engagement with a rail through said slot, and means extending through the tie and through the clamp for locking the rail clamp in firm engagement with the tie.

1,461,070. PICK FOR STRINGED INSTRUMENTS. PETER M. RUDESLEY, Passaic, N. J. Filed Sept. 22, 1919. Serial No. 325,469. 6 Claims. (Cl. 84—322.)

6. As a new article of manufacture, a pick for stringed instruments provided with elongated raised and depressed surfaces on each side thereof radiating from a common center, and in close proximity presenting an undulating surface, and terminating short of said common center to present a smooth surface upon either side of the pick, within that encompassed by the said raised and depressed surface.

1,461,071. OPHTHALMIC MOUNTING. ELMER L. SCHUMACHER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Jan. 19, 1922. Serial No. 530,278. 6 Claims. (Cl. 88—47.)

1. The process of mounting a lens in a non-metallic frame, consisting in forming a rim with a lens receiving groove, displacing a portion of the wall of the groove,

causing the wall to set in displaced position, inserting a lens within the groove, and subsequently restoring the displaced portion of the frame to its original position to secure the lens therein.

1,461,072. RHEOSTAT WITH AUXILIARY CONTACT SYSTEM. DAVID HARRISON SHERIFF, Jr., Kansas City, Mo. Filed Dec. 4, 1922. Serial No. 604,820. 9 Claims. (Cl. 219—55.)

1. In a rheostat wherein is provided a rotary spindle and means cooperating therewith for varying the resistance in circuit; a set of auxiliary contacts, and means bringing the same into action.

1,461,073. OPHTHALMIC MOUNTING. HARRY H. STYLL, Southbridge, Mass. Filed Mar. 12, 1920. Serial No. 365,184. 2 Claims. (Cl. 88—50.)

1. A mounting of the character described comprising a bridge having a post rising therefrom provided with threaded ends, a guard lever and a securing device for the guard lever having a bearing portion encircling the post and projecting through the guard lever, having a steadying portion laterally engaging the lever and an upwardly projecting spring receiving portion, said spring receiving portion being interiorly threaded to lockingly engage the post.

1,461,074. LENS-MARKING DEVICE. EDGAR D. TILLYER and JOHN F. WIXTED, Southbridge, Mass., assignors to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Aug. 11, 1922. Serial No. 581,243. 4 Claims. (Cl. 41—20.)

1. An ophthalmic lens having normally invisible markings thereon rendered visible when moistened and means to retain said markings in a visible state.

1,461,075. AMUSEMENT DEVICE. DOMENICO TUSO, Burbank, Calif. Filed Nov. 11, 1920. Serial No. 423,324. 2 Claims. (Cl. 46—27.)

2. An amusement device comprising a support, an inclined bearing sustained on the support, a shaft journaled in the bearing, a wheel fixed to the shaft, a gear fixed to the shaft between the wheel and bearing, a second shaft disposed vertically within the support, driving means operatively connected to the second shaft, a gear fixed to

the second shaft and meshing with the first gear whereby rotation of the wheel is effected, extensions projecting radially from the periphery of the wheel, elements en-

gaging the extensions, and passenger carrying members sustained from the elements so as to be normally disposed in a vertical plane.

1,461,076. DOUGH ROUNDING-UP MACHINE. FRANK H. VAN HOUTEN, Beacon, N. Y., assignor to Dutchess Tool Company, Beacon, N. Y., a Corporation of New York. Filed Oct. 16, 1920. Serial No. 417,469. 11 Claims. (Cl. 107—9.)

2. In a dough machine, a cone-shaped drum, a spiral molding fence surrounding said drum and having a delivery exit, driving means for rotating said drum, and means for locating said fence with respect to said driving means as to deliver the dough balls in any chosen direction with respect to said driving means.

1,461,077. PROCESS OF MAKING SUPERPHOSPHATES. HYLEMAN ALISON WEBSTER, Columbia, Tenn. Filed May 20, 1922. Serial No. 562,557. 7 Claims. (Cl. 71—7.)

1. The process of making superphosphates which consists in finely subdividing phosphate rock to form a powder; flowing said powder into a mixer; flowing an acid into said mixer simultaneously with said powder, the weight of said acid being less than that theoretically required to convert all the tri-calcium phosphate present into mono-calcium phosphate; mixing said powder and acid into a mass; and eliminating free water present in the mass, substantially as described.

1,461,078. LENS HOLDER. ARTHUR A. ARNOLD, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Oct. 26, 1916. Serial No. 127,811. 1 Claim. (Cl. 51—217.)

A lens holder for use in slotting lenses, including a base block provided with means for attaching the same, a bracket rising from the block and carrying a guide bar, a stop rigidly secured on the bar, a lens holding member, a guide lug carried by said holding member for sliding movement on the bar, pins carried by the holding member for engaging the lens, an actuating spring on the bar intermediate the stop and the holder guide lug for inwardly actuating the holder, and means for predetermining the limit of the inward movement of the holder.

1,461,079. WEATHER STRIP. ALBERT B. BEITMAN, Cleveland, Ohio. Filed July 27, 1920. Serial No. 399,357. 6 Claims. (Cl. 296—93.)

1. A weather strip for windshields comprising a channel member designed for attachment to the edge of the windshield pane and having a water collecting groove within the plane of the front surface of its outer flange.

1,461,080. TWO-CYCLE INTERNAL-COMBUSTION ENGINE. CARL BERGER, Karlsbad, Czechoslovakia. Filed Apr. 4, 1922. Serial No. 549,599. 4 Claims. (Cl. 123—48.)

4. In a two cycle internal combustion engine having an auxiliary piston for effecting the exhaust of the products of combustion and suction of the fuel air mixture, a second auxiliary piston (21), serving as a head for the main cylinder (5) and moving in a cylinder (9) placed on top of the main cylinder, a non-circular disc (4) driven from the engine shaft (2) actuating a resiliently supported rod (36) movably connected to the second auxiliary piston (21) by a lever (28), levers (39, 24) movably connecting the resiliently supported rod (36) to a valve in the auxiliary piston (19), providing the disc (46) of the valve in said piston with a central pillar (49) for guiding the disc in the auxiliary piston and also with two hooked

uprights (47) engaging with cams (52) movably arranged on either side of a cross stay (44) of the auxiliary piston (19) and a cam (3) driven from the engine shaft (2)

actuating the resiliently supported spindle of the exhaust (12) and suction-valve (13), for the purpose set forth in the specification.

1,461,081. CORRECTION OF TYPE IN PRINTERS' GALLEYS. THOMAS BURDEN, Warrnambool, Victoria, Australia. Filed Sept. 11, 1922. Serial No. 587,575. 8 Claims. (Cl. 101—400.)

1. A device for the purpose indicated comprising means for printing a vertical row or column of index characters on the proof sheet simultaneously with the printing of the transverse lines of reading matter thereon, and a type line locator having a second vertical row or column of index characters adapted for disposition beside the lines of set-up type, the characters of said second column occupying substantially the same position relative to the lines of type as said printed index characters occupy in relation to the printed lines of the proof sheet.

1,461,082. OPHTHALMIC MOUNTING. CHARLES O. COZZENS, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Original application filed Nov. 24, 1917, Serial No. 203,770. Divided and this application filed Sept. 17, 1920. Serial No. 410,921. 5 Claims. (Cl. 88—50.)

5. A combination frame including a split metallic frame member, a bridge secured to one end of said frame member, a sleeve carried by the other end of said frame member, a non-metallic frame member extending around the

metallic frame member, means for uniting one end of the non-metallic frame member with the bridge and the opposite end with the sleeve, means for securing the

sleeve and bridge together to unite the parts, and a fingerpiece actuating mechanism pivoted to the bridge and contained and concealed within the sleeve.

1,461,083. INDICATING DEVICE. MARK H. DAMERELL, Worcester, Mass., assignor to Wyman-Gordan Company, a Corporation of Massachusetts. Filed Dec. 2, 1919. Serial No. 341,945. 5 Claims. (Cl. 33—148.)

1. An indicating device having in combination a movable support, a pair of contact members mounted on said support, an indicating device connected to said members and effective to indicate the diameter of the work, and a second indicating device effective to simultaneously indicate the transverse position of the work relative to said support, both indications being on substantially enlarged scales.

1,461,084. BRAKING ATTACHMENT. JOSEPH L. DEVON, Atlanta, Ga. Filed Aug. 15, 1921. Serial No. 492,304. 1 Claim. (Cl. 188—77.)

The combination with the chassis of a road vehicle, said chassis including a longitudinally extending channel-bar, of a rotating shaft carried by said chassis, a brake-band for said shaft, a pivoted rocker to which the free ends of said brake-band are secured, a pull-rod secured to said rocker, a tubular member loosely projecting through said channel-bar and resiliently connected with said pull-

rod, a hand-lever pivotally secured to said tubular member and having a cam face bearing against said channel-bar, and a guide-member secured to said channel-bar and having a cylindrical bore through which said tubular member projects.

1,461,085. MACHINE FOR OPERATING ON SHOE BOTTOMS. EDWARD ERICKSON, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 15, 1918. Serial No. 228,544. 17 Claims. (Cl. 12—67.)

1. A welt-butting machine having, in combination, a welt support for engaging a welted unsoled shoe beneath the end of the welt, a movable supporting arm, a welt-butting cutter carried thereby, and means for actuating said supporting arm to cause said cutter to butt the welt upon said support in substantially a straight line and to return it to initial position in a curved path.

1,461,086. DIAPHRAGM DEVICE. MILTON A. FESLER, Oakland, Calif., assignor to Petroleum Heat and Power Company, a Corporation of Delaware. Filed July 2, 1920. Serial No. 393,647. 10 Claims. (Cl. 236—26.)

10. A device of the character described, comprising, in combination, a pair of spaced diaphragms, means to confine the margins of said diaphragms, and a plurality of members interposed between said diaphragms having provision to limit relative movement of said members on flexion of the diaphragms in either direction.

1,461,087. WINDSHIELD CLEANER. ARTHUR L. FITZ GIBBON, Washington, D. C. Filed Apr. 15, 1922. Serial No. 553,065. 3 Claims. (Cl. 15—253.)

1. In a wind shield cleaner, a wiper mounted for rotation in contact with the glass of said shield, an air operated fan coaxial therewith, and means operatively connecting said fan and wiper so that the fan will rotate the wiper.

1,461,088. IGNITION DEVICE FOR INTERNAL-COMBUSTION ENGINES. ERNEST ALLEN GOSNELL, Burkburnett, Tex. Filed Nov. 30, 1921. Serial No. 518,905. 3 Claims. (Cl. 123—169.)

1. In combination with a cylinder of an internal combustion engine, a plug threadedly mounted therein adjacent its side wall and provided with two or more ports extending therethrough and having threads at their upper ends, sparking devices mounted in the threaded ends of the ports, a valve plate mounted on the bottom face of the plug for closing either of the plugs thereof and means for rotating the plate, said plate being pivotally mounted so as to abut the side wall of the cylinder when closing one of the ports in the manner and for the purpose specified.

1,461,089. INTERNAL-COMBUSTION ENGINE. JOHN WALLACE HALL, Feltham, England. Filed Mar. 4, 1920. Serial No. 363,357. 6 Claims. (Cl. 123—44.)

1. In a four stroke cycle internal combustion engine, a series of exhaust and scavenging ports arranged around the high pressure end of the combustion space of each cylinder, a reciprocable sleeve valve taking bearing on each respective cylinder wall, and means for reciprocating said sleeve valve, so that the exhaust and scavenging ports are maintained open during the whole of each exhaust stroke, and for approximately the first half of each following induction stroke, comprising, juxtaposed discs

coaxially mounted, and provided on their opposed faces with complementary groove paths, a rod connected to

said sleeve valve and a shuttle member carried by said rod and adapted to be actuated alternately by each groove path, and means for simultaneously rotating said discs.

1,461,090. WOODCUTTER SIZER HEAD. HANS K. HANSEN, San Pedro, Calif. Filed Oct. 6, 1921. Serial No. 505,754. 6 Claims. (Cl. 144—218.)

1. The combination with a rotary cutter head, of a ring shaped member, means for clamping said ring shaped-member upon the rotary cutter head, a series of blades detachably seated in said ring-shaped member, and projecting beyond the periphery thereof, and means for clamping said blades to said ring-shaped member.

1,461,091. VEHICLE SHOCK ABSORBER. GEORGE HENLEY, Edenburg, Pa. Filed May 10, 1921. Serial No. 468,416. 10 Claims. (Cl. 188—101.)

1. In a shock absorber for automobiles, a cylinder, a rod-like plunger operating therein, a mixture of graphite and cup grease in said cylinder, right angularly related friction and resistance producing projections on the plunger, and means to connect one end of the cylinder and the plunger at the opposite end to independently mov-

able parts of the automobile, certain of said projections of the plunger, comprising flukes pivoted to the plunger and tapered in width and thickness toward their free ends,

said flukes being adapted to open in one direction of movement of the plunger and to close against the plunger upon opposite movement thereof.

1,461,092. COOKING DEVICE. MILAN IVANCIC, deceased, late of Kilchberg, Switzerland; by Alma Ivancic, administratrix, Zurich, Switzerland. Filed June 30, 1920. Serial No. 393,150. 4 Claims. (Cl. 53—2.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A cooking device comprising in combination an annular vessel, a hood placed on said vessel, a plurality of smaller vessels arranged superposed on the central portion of said annular vessel.

1,461,093. HYDRAULIC SALT PRESS. GEORGE KERSHNER, Hutchinson, Kans. Filed Nov. 10, 1919. Serial No. 336,967. 18 Claims. (Cl. 100—50.)

1. A hydraulic press for forming salt blocks having relatively movable members combining to bound a forming space subject to reduction in capacity to compress a contained substance, and represented respectively by a lateral restraining wall and terminal opposed elements, one of which elements is adapted to progress into the

space bounded laterally by the wall member, and means for successively causing said elements to approach each

other to define a predetermined length of forming space and then retain said relation during a continued progress of said first named element into the space.

1,461,094. LENS GRINDER. ARTHUR PELLOW, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Dec. 4, 1919. Serial No. 342,392. 4 Claims. (Cl. 51—124.)

3. A lens grinding machine, including a support, a rotatable shaft and a pivoted arm carried by the support and projecting therefrom in spaced relation, said members having substantially aligned portions for engagement with a grinding tool and a lens holder, means for swinging the arm about its pivot in a direction toward the shaft, a former on the shaft for limiting the movement of the arm in the direction of the shaft, and driving connections between the former and shaft to insure their concomitant rotation.

1,461,095. WINDSHIELD. ABRAM MORITZ REINER, Cleveland, Ohio. Filed May 7, 1921. Serial No. 467,719. 3 Claims. (Cl. 296—84.)

1. The combination, with a standard, of a support adjustably connected thereto, a wing comprising a frame having channels in the front and rear edges thereof, a pane of transparent material mounted in the rear channel, a strip of flexible material mounted in the front channel and adapted to extend across and close the space be-

tween the said frame and the said standard, and means for pivotally supporting the said wing from the said

support, the said supporting means comprising one or more bolts extending through the said frame between the channels thereof.

1,461,096. BOW FOR MUSICAL INSTRUMENTS. CHARLES D. RIGG, Altoona, Pa. Filed Jan. 13, 1921. Serial No. 437,002. 2 Claims. (Cl. 84-282.)

1. A tip mounting for the hair of a violin bow consisting of a tip body having an opening therein arranged at right angles to the bow string position and also provided with a slot intersecting said opening, and a shoulder formed on the body at one end of the opening and over which the hairs of the bow string may be distributed when the tip is in place.

1,461,097. CIRCULAR MILLING MACHINE. HOWARD C. ROSE and ALEXANDER OBERHOFFKEN, Detroit, Mich., assignors to Ingersoll Milling Machine Company, Rockford, Ill., a Corporation of Illinois. Filed Aug. 15, 1921. Serial No. 492,425. 13 Claims. (Cl. 90-21.)

1. In a circular milling machine, the combination of a rotatable work carrier, a tool carrier immovable rela-

tively to said work carrier, means for rotating said carriers as a unit, and means for causing a relative movement between the work and the tools carried by said respective carriers, during the rotation thereof, said means comprising work supports slidably mounted on said work carrier and means for reciprocating said supports transversely of the axes of said tools.

1,461,098. MILLING MACHINE. HOWARD C. ROSE and ALEXANDER OBERHOFFKEN, Detroit, Mich., assignors to Ingersoll Milling Machine Company, Rockford, Ill., a Corporation of Illinois. Filed Aug. 15, 1921. Serial No. 492,426. 9 Claims. (Cl. 90-21.)

1. In a milling machine, the combination of a rotatable work carrier, a rotatable tool carrier, and a plurality of tools carried thereby, said carrier being arranged to cause a relative movement between said tools and said work carrier in a direction oblique to the radii of said work carrier intersecting said work.

1,461,099. EGG CRATE. NICHOLAS SANDOR, Dresden, Germany. Filed Oct. 28, 1921. Serial No. 511,212. 11 Claims. (Cl. 217-22.)

1. A cell-forming partition adapted to co-operate with other exactly similar partitions to form a plurality of cells each partition consisting of a pair of parallel side walls with integral top and bottom walls, said bottom wall being unbroken throughout the length of the partition.

1,461,100. METHOD OF TREATING FILAMENTS FOR INCANDESCENT ELECTRIC LAMPS. HARRY H. SMITH, Newark, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Dec. 19, 1917. Serial No. 207,851. 5 Claims. (Cl. 176-132.)

1. The method of treating a refractory metallic filamentary body of tungsten or equivalent metal containing

crystal growth directing ingredients, which consists in heat-treating said body according to a predetermined seasoning schedule that will cause the development of crystals having considerable length, so arranged as to overlap or interlace with each other.

1,461,101. ELECTRICAL DISTRIBUTOR. WILLIAM B. STEARNS, Milton, Mass. Filed Apr. 25, 1922. Serial No. 556,364. 15 Claims. (Cl. 200—32.)

11. An electrical distributor comprising a stationary part, a rotatable part within said stationary part and having an outer face in sliding contact with a complementary face on said stationary part, means in said parts for successively closing an electric circuit comprising spaced contact members in the form of mercury trapped in openings in the opposed faces of said parts and adapted to be in registration in certain positions of said parts.

1,461,102. DIFFERENTIAL GEAR. JAMES HERVEY STERNBERGH, Reading, Pa. Filed June 3, 1921. Serial No. 474,608. 1 Claim. (Cl. 74—99.)

In differential gearing mechanism, a divided drive shaft having gear-carrying ends spaced-apart to permit the location therebetween of a radial-armed pinion carrier, a driven casing therefor provided with radial bearing-recesses, and a pinion carrier comprising two bars engagingly crossed at the shaft axis between said spaced-apart shaft ends and forming pinion-carrying arms arranged in a common plane and adapted to enter said bearing recesses.

1,461,103. GOVERNOR FOR ELECTRIC CIRCUITS. EDWARD J. TOMLINSON, Newark, N. J., assignor to Splitdorf Electrical Company, Newark, N. J. Filed June 8, 1920. Serial No. 387,496. 9 Claims. (Cl. 171—222.)

1. In a governor for an electrical circuit, the combination of a plurality of plates and means for supporting the same, a rotatable shaft carried by said plates

and having at one end a collar, a plurality of arms pivoted to said collar, said arms having weights at their outer ends and stop fingers at their other ends to engage said collar, a member carried by and between the outer

ends of said arms, a spring in operative engagement with said member and carrying a contact, a second spring carrying a contact to co-operate with the first mentioned contact and means for adjusting the position of the second contact with reference to the first.

1,461,104. CARBURETOR. ADOLF AEBERLI, Toronto, Ontario, and WILHELM DREYER, Lachine, Quebec, Canada. Filed Jan. 14, 1920. Serial No. 351,426. 5 Claims. (Cl. 123—127.)

1. In a carburetor, the combination with the engine exhaust, of a high grade fuel supply, a low grade fuel supply, a valve adapted to cut off the high grade fuel supply and open the low grade supply, and means connected with the engine exhaust for conducting exhaust pressure to actuate said valve.

1,461,105. SHARPENER FOR SLICING MACHINES. RUDOLPH W. BACHMAN, Laporte, Ind., assignor to U. S. Slicing Machine Company, Laporte, Ind., a Corporation of Indiana. Filed Nov. 21, 1921. Serial No. 516,725. 10 Claims. (Cl. 51—248.)

1. Sharpening mechanism for a rotary slicing knife comprising a grinder, an adjustable support for said

grinder, and an adjustable device for retaining said grinder and support in fixed position relative to one another during a sharpening operation.

- 1,461,106. CONVEYER SYSTEM. ALBERT ELIE BAILEY, Nashua, N. H. Filed Nov. 5, 1921. Serial No. 513,019. 8 Claims. (Cl. 83—92.)

1. In a conveyer system, the combination of a conveyer unit for handling carriers of different sizes, and mechanism for automatically switching the small carriers off said conveyer unit while permitting the large carriers to travel along said unit.

- 1,461,107. STAKE-HOLDING DEVICE FOR TRUCKS, TRAILERS, AND THE LIKE. MICHAEL T. BARRIER, Lancaster, Calif. Filed Sept. 9, 1921. Serial No. 499,583. 5 Claims. (Cl. 280—147.)

1. A stake holding device for trucks and the like, comprising in combination with sockets for receiving said stakes, a stationary bracket attached to each of said stakes and having a portion thereof spaced from the stake, an operating member hinged to one end of said bracket, an off-set latch member hinged at one end to said operating member and formed at its other end for gripping the edge of said socket member for holding the stakes in position, and a sleeve for holding said member in locked position.

- 1,461,108. GARBAGE INCINERATOR. WILLIAM F. BORN, Lakewood, Ohio. Filed Apr. 3, 1922. Serial No. 548,925. 8 Claims. (Cl. 203—6.)

1. In an incinerator of the class described, the combination of a double walled outer casing adapted to hold a

cooling liquid, a heating pot mounted within such casing and spaced and insulated therefrom, means for heating said pot, a condensing coil mounted in such cooling liquid and connected to said pot, and an air-tight cover for said casing and pot.

- 1,461,109. TOY. GEORGE WALDO CABLE, Norwalk, Conn. Filed Dec. 24, 1921. Serial No. 524,750. 5 Claims. (Cl. 46—45.)

1. A toy comprising a base, wheels for supporting the base, a support rotatably mounted on the base, a representation of an animal or the like comprising two sections so hinged together as to allow relative lateral turning movements between the sections, resilient means tending to keep the sections in alignment, one of said sections being secured to said support and the other section being movable independently thereof, means operated by the wheels for rotating said support, and a stop on said base arranged to engage said movable section and limit rotative movement thereof as the other section and the support are rotated.

- 1,461,110. MEANS FOR PREVENTING FROST ON TREES AND THE LIKE. JAMES S. COX, Los Angeles, Calif. Filed June 6, 1922. Serial No. 566,420. 6 Claims. (Cl. 47—36.)

1. A frost prevention device for orchards and the like which includes a frame separate from the tree, a plurality of moisture collecting elements supported on said frame and extending from the top to the bottom of the tree at spaced points.

- 1,461,111. AUTOMATIC TALKING MACHINE. LEE G. DANIELS, Rockford, Ill. Filed Jan. 19, 1920. Serial No. 352,257. 60 Claims. (Cl. 274—10.)

1. In a talking machine, a revoluble carrier, a plurality of record turn tables circumferentially mounted on said

carrier, means for revolving the record turn tables, a reproducer, and mechanism for continuously revolving the

carried to move each record turn table in succession into playing relation with the reproducer and to feed such turn table laterally therebeneath during the reproduction.

1,461,112. * METHOD AND MEANS FOR RAISING WATER OR OTHER LIQUID BY COMPRESSED AIR. ROBERT COCHRAN DICKSON, Medan Deli, Sumatra Filed Sept. 8, 1920. Serial No. 408,915. 5 Claims. (Cl. 103—248.)

4. An apparatus for raising liquid by compressed air, comprising a chamber provided with inlet and discharging valves for the liquid being raised and admission and exhaust valves for the compressed air, mechanism for closing the compressed air admission valve, means for closing the air exhaust valve and means controlled by said mechanism for locking the air exhaust valve in closed position when the compressed air admission valve is in open position.

1,461,113. SUBSOILER ATTACHMENT FOR PLOWS. FRANK M. DYKE, Ramona, Calif. Filed Dec. 6, 1920. Serial No. 428,588. 3 Claims. (Cl. 97—79.)

3. In an attachment of the class described, the combination with a plow, of a beam provided with a digging member, a clamp member secured to the plow, a clevis

member pivotally connected to said clamp member and connecting with said beam intermediate its ends, a supporting member mounted on the plow adapted to support the normally front end of said beam, means for adjusting said supporting member on said plow whereby the front end of said beam may be raised or lowered for regulating the depth of the digging end of the beam comprising a clip member secured to the plow provided with a spring in one side and teeth in the other adapted to engage the teeth on said supporting member.

1,461,114. SIGNAL FOR VEHICLES. LARS H. EKEBERG, Rockford, Ill. Filed Apr. 17, 1922. Serial No. 553,770. 1 Claim. (Cl. 116—41.)

A signal for vehicles comprising a tubular holder adapted to be attached to a vehicle reaching from side to side thereof, a signal carrying rod slidable in said holder and having a center section and end sections and being of approximately the same length as said holder, each end section being tubular and open on its underside, a signal device disposed in the open portion of each end section comprising a plurality of fingers pivoted at their inner ends to the outer end of the center section and having inner ends of different lengths serving as stops for limiting the signal positions of the respective fingers, and means for moving said rod lengthwise in the holder to project either end therefrom, the fingers of each signal device being normally confined within and resting on the bottom of the holder and adapted when projected to drop at their outer ends to the signal position through the open underside of the projected rod section.

1,461,115. MEANS FOR DIPPING AND COATING CONFECTIONERY. FRANK R. GIDDINGS, Kalamazoo, Mich., assignor of one-half to Vance G. Piper, Kalamazoo, Mich. Filed Mar. 7, 1922. Serial No. 541,658. 2 Claims. (Cl. 91—6.)

1. In a dripping and drying hanger for coating purposes, the combination of a hanger formed of a wire with hook at its upper end and an offset and depending portion with a smooth, straight, slim pin at right angles thereto secured thereto by insertion through the lower end of said hanger whereby a bar of material will hang at an angle on the rack, as specified.

1,461,116. YIELDING SELF-ARIGHTING SAFETY LAMP POST. FRANK W. GRISWOLD, Rogers, Minn. Filed Aug. 2, 1922. Serial No. 579,290. 11 Claims. (Cl. 40—145.)

11. A lamp post or similar structure having in combination, an upstanding post, a member having a curved

surface secured to the lower end thereof, extensible means for holding the said members normally in upright posi-

tion and a movable supporting means adjacent the post operative to permit the post to be swung to substantially a horizontal position.

1,461,117. FILAMENTARY BODY FOR ELECTRIC LAMPS AND METHOD OF MAKING THE SAME. ROY D. HALL, East Orange, and HARRY H. SMITH, Newark, N. J., assignors to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Dec. 19, 1917. Serial No. 207,837. 10 Claims. (Cl. 176—132.)

1. A filament for electric incandescent lamps or other devices, composed primarily of tungsten and made up mainly of a number of large crystals so interrelated as to be capable of preventing substantial sagging and offsetting during a normal or commercially useful life for such a lamp or other device.

1,461,118. FILAMENT. ROY D. HALL, East Orange, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Dec. 19, 1917. Serial No. 207,838. 19 Claims. (Cl. 176—132.)

1. A filamentary body composed mainly of tungsten or equivalent metal that at incandescence tends to sag when utilized as a conductor of electricity, and containing auxiliary ingredients capable of controlling the crystalline structure to produce a substantially non-sagging filament when subjected to a predetermined heat treatment.

1,461,119. TOY GUN. JAMES C. HARRIS, Dallas, Tex. Filed Nov. 6, 1922. Serial No. 599,264. 2 Claims. (Cl. 124—1.)

1. A toy of the character described comprising a wooden frame unit, consisting of a butt, stock and barrel, an assembly of triggers, said assembly consisting of a series of push pins, one behind the other, sliding through openings in the breech portion of the frame and in the sheath enclosing it; levers attached to the upper portion of the breech and encased therein, to each of which the push pin is applied, each trigger mechanism being separate and apart from the other, vertical notches

in the upper portion of the breech behind each lever, rubber bands attached from said notches to and over the end of the barrel, and a pocket within the butt portion of the frame, a metal cover encasing said pocket and a spring securing the cover in place, said toy to be used for shooting rubber bands.

1,461,120. BAG OR NET FASTENER. BERT L. HER-
RICK, Oakland, Calif. Filed Dec. 19, 1922. Serial
No. 607,820. 5 Claims. (Cl. 24—305.)

1. A bag fastener, comprising two body members adapted to approach and recede from each other, one of said members having an inturned end and an inturned hook at the extremity of said end, a tongue adapted to contact the said hook, and a guard housing the said tongue, and the other of said body members having a link hinged thereto at its extremity and adapted to engage the said hook, the said guard preventing the disengagement of said link when the fastener is closed.

1,461,121. AUTOMATIC TRANSMISSION RELEASE FOR MOTOR VEHICLES. JESSE A. HILL, South Greenfield, Mo. Filed Sept. 30, 1921. Serial No. 504,486. 3 Claims. (Cl. 74—39.)

1. A clutch release for a motor vehicle transmission mechanism including in combination with the clutch pedal, and a clutch lever adjustably connected to one end thereof, of a releasing member carried by the control shaft of said motor vehicle, said releasing member including a tubular sleeve, a rod adjustably mounted in said sleeve and having an arcuate-shaped head at its upper end, and an anti-friction roller on the free end of said clutch lever and adapted for engagement with said arcuate-shaped head on said rod.

1,461,122. TOBACCO-LEAF-BOOKING DRUM. GRAHAM H. JACKSON, Newark, N. J., assignor to Universal Tobacco Machine Company, New York, N. Y., a Corporation of New York. Filed Mar. 3, 1921. Serial No. 449,548. 4 Claims. (Cl. 131—56.)

4. In a tobacco leaf booking machine the combination of a booking belt, a pair of spaced heads, a shaft on

which the heads are mounted, a continuous web of rubber forming a leaf receiving surface supported by the heads

and free to yield away from the belt between the heads as the thickness of the book increases.

1,461,123. PRINTING ROLLER. ANDREW JOHNSON, Milwaukee, Wis. Filed Sept. 18, 1920. Serial No. 411,207. 1 Claim. (Cl. 91—67.8.)

The combination with a supporting bearing and a printing roller having a reduced end portion journalled in said bearing and forming a shoulder with the portion of the roller of larger diameter, of a collar mounted on said portion of larger diameter and having a flanged end extending around said reduced end portion and engageable with the side of the bearing, said collar having a threaded opening and a set screw mounted in said opening for adjustably securing said collar to the roller.

1,461,124. TOWEL RACK. WILLIAM KAHL, Brooklyn, N. Y. Filed June 4, 1921. Serial No. 474,924. 3 Claims. (Cl. 26—343.)

1. A towel rack comprising a bracket and towel supporting rods, the bracket having a horizontal shell, a plurality of ears extending from said shell, the ends of the supporting rods being slotted to receive said ears, and pivot pins for pivotally connecting the slotted ends of the rods to said ears, the ends of the rods overlapping one another so as to form stops to limit the outward swing of the rods.

1,461,125. FABRIC-STITCHING DEVICE. JOSEPH D. LACROIX, New Orleans, La., assignor to Kelly-Springfield Tire Company, Akron, Ohio, a Corporation of New Jersey. Filed May 18, 1921. Serial No. 470,681. 7 Claims. (Cl. 154—10.)

2. The combination with a tire forming machine, comprising, a revoluble core adapted to support tire forming

material thereon; of a stitcher element, comprising a pedestal movable toward and away from the core, a housing on the pedestal adapted to be transversely adjusted with respect to the core, a radially advanceable

stitcher carriage having a disk thereon, and a unitary control lever whereby the said transverse and radial movements are effectuated by, respectively, vertical and horizontal motions on said lever.

1,461,126. TOBACCO PIPE. FLOYD E. LASURE, Waukesha, Wis. Filed Mar. 28, 1921. Serial No. 456,453. 3 Claims. (Cl. 131—12.)

2. A tobacco-pipe comprising an open bowl and a tubular stem in communication therewith, the base of the bowl having an opening in communication with the bowl and with the bore of said stem, a removable plug in said opening grooved longitudinally to control the communication between said bowl and the bore of said stem adjustably, said bowl being composed of different materials arranged in concentric layers.

1,461,127. TOBACCO PIPE. FLOYD E. LASURE, Waukesha, Wis. Filed Nov. 26, 1921. Serial No. 517,964. 1 Claim. (Cl. 131—12.)

A tobacco pipe, comprising a bowl having a longitudinally hollowed stem, and having an elongated passage in its bottom effecting communication longitudinally with the hollow of said stem, a longitudinally orificed mouth-piece having an end diminished terminally with its diminished part removably and rockably mounted in the hollow of said stem terminally, and a scraper in

said hollow consisting of a bar narrower than the said elongated passage, having one end formed into an elastic split-ring to be engagingly secured removably upon the inserted diminished end of said mouth-piece to be rocked or moved slidably therewith, and having its other end bent angularly, shaped to fit the walls of said hollow and positioned in said hollow at one end of the said elongated passage unobstructedly.

- 1,461,128. MAGNETO IGNITION DEVICE. JOSEPH K. LEIBING, Newark, N. J., assignor to Splitdorf Electrical Company, Newark, N. J. Filed July 21, 1919. Serial No. 312,426. 14 Claims. (Cl. 123—149.)

1. In a device of the character described, a coil for producing a spark, means for energizing said coil including a magnetic field and a movable element having a normal stationary position for directing magnetic flux through said field and coil, means for moving said movable element from said normal position to a working position, means for preventing said coil from interfering with the movement of the magnetic flux during a considerable part of the movement of the movable element from normal to working position, means for utilizing the magnetic flux put into operation as the movable element reaches the working position and means for completing from the working position the working stroke of said movable member for the purpose described.

- 1,461,129. METHOD OF AND MEANS FOR FORMING GUN BARRELS. CRAWFORD C. LOOMIS, Iliion, N. Y. Filed Jan. 8, 1921. Serial No. 435,811. 5 Claims. (Cl. 29—1.1.)

1. In the manufacture of gun barrels, the process of forming a flared approach to the barrel and forming a bullet incline therein which consists in bringing a sub-

stantially conical cutting tool against the end of the barrel coaxially therewith to form said flared approach and then revolving the barrel relatively to the tool about a transverse axis for forming the bullet incline.

- 1,461,130. METHOD OF ASSEMBLING HOSE AND FITTING. MALCOLM LOUGHEAD, Detroit, Mich., assignor to Four Wheel Hydraulic Brake Company, Los Angeles, Calif., a Corporation of California. Filed Feb. 26, 1923. Serial No. 621,223. 5 Claims. (Cl. 29—88.2.)

1. The method of assembling an expanded hose and fitting for the end thereof, which consists in positioning a fitting member about one end of the hose, positioning a second fitting within the end of the hose bore, forcing a portion of the wall of one of said fitting members toward the other to grip the hose therebetween, expanding the hose, and snugly inserting a flexible noncollapsible tube within the hose bore while in expanded condition, the end of said tube being extended into the end of said second fitting member.

- 1,461,131. METHOD OF PRODUCING VISUAL DEPTH IN PROJECTED PICTURES. THOMAS HENRY MARTEN, Toronto, Ontario, Canada. Filed Oct. 1, 1921. Serial No. 504,545. 4 Claims. (Cl. 88—24.)

1. A method of producing visual depth in projected pictures, consisting in surrounding the picture area with an element of light of different refrangibility from the light of the picture to create a condition of differing focal adjustment of the eye of the observer.

- 1,461,132. METHOD OF PRODUCING VISUAL DEPTH IN PROJECTED PICTURES. THOMAS HENRY MARTEN, Toronto, Ontario, Canada. Filed Apr. 3, 1922. Serial No. 549,005. 5 Claims. (Cl. 88—24.)

1. A method of producing visual depth in projected pictures, consisting in locating about the picture a flexible image forming a visual attraction and maintaining focal activity in the eye of the observer.

1,461,133. PROJECTION DEVICE. THOMAS HENRY MARTEN, Toronto, Ontario, Canada. Filed May 6, 1922. Serial No. 558,916. 6 Claims. (Cl. 88—24.)

1. A projection device, comprising, a pair of projectors, a fixed source of light, and means for directing the beam of light from said light source in alternating periods to both projectors.

1,461,134. BUFFING MACHINE. EDWARD N. MAULL, Orlando, Fla., assignor to Skinner Machinery Company, Dunedin, Fla., a Corporation of Florida. Filed Dec. 13, 1922. Serial No. 606,745. 16 Claims. (Cl. 146—202.)

1. A machine for treating articles, comprising means for moving articles along a predetermined path, a rotating buffer adjacent to said path, and intermittently moving means adjacent to said rotary buffer for moving said articles away from said buffer at predetermined intervals.

1,461,135. HYDRAULIC BEARING FOR SUGAR MILLS AND THE LIKE. GUY C. MITCHELL, Hamilton, Ohio, assignor to the Hooven, Owens, Rentschler Company, Hamilton, Ohio, a Corporation of Ohio. Filed Oct. 25, 1920. Serial No. 419,550. 4 Claims. (Cl. 100—47.)

1. In a device of the character described, a top cap having an aperture therein constituting a cylinder, an

inturned shoulder in the lower end of said cylinder, locking lugs in the upper end of said cylinder, a lower plunger adapted for positioning within said cylinder, means thereon adapted to cooperate with said inturned shoulder to limit movement of said plunger in one direction; an upper plunger adapted for positioning within said cylinder, a cross-block constructed for positioning within said cylinder, lugs thereon adapted to cooperate with said locking lugs to limit movement of said upper plunger in one direction; and means for admitting pressure fluid to said cylinder, between said plungers.

1,461,136. DIPPER TOOTH. MACCORMICK GIBSON MOORE, Wyomissing, Pa., assignor to Moore & Moore, Inc., Reading, Pa., a Corporation of Pennsylvania. Filed Jan. 2, 1923. Serial No. 610,123. 8 Claims. (Cl. 37—142.)

1. A dipper tooth comprising a bifurcated base portion and a double-ended point member reversibly insertable cross-wise between the spaced base members with one of its pointed ends projecting beyond the latter and seating rearwardly thereagainst.

1,461,137. STAPLE-DRIVING MACHINE. JOHN MUTH, Norwalk, Conn., assignor to The E. H. Hotchkiss Company, Norwalk, Conn., a Corporation of Connecticut. Filed Mar. 24, 1921. Serial No. 455,121. 24 Claims. (Cl. 1—2.3.)

22. In a stapling machine, in combination, a casing, a staple strip carrying bar, a staple strip feeding device within said casing, and a sliding channel member adapted to straddle said bar and the staple strip thereon and accessible from the exterior of said casing for disengaging said feeding device from the staple strip to permit withdrawal of the latter.

1,461,138. DECIMAL-EQUIVALENT CHART. HERBERT O. OLSON, Rockford, Ill. Filed Jan. 3, 1920. Serial No. 349,162. 3 Claims. (Cl. 235—88.)

1. A decimal equivalent chart comprising a top and a bottom member pivotally connected so that one may be revolved with respect to the other, the top member having a series of openings spaced in a radial plane and having the following denominators below said openings, spaced from the center outwardly, viz: 4, 8, 16, 32 and 64, the bottom member having numerators for each of said denominators arranged in annular paths coincident with said openings so that said member may be

relatively revolved to position any numerator in the opening above its respective denominator, and the bottom member having a decimal equivalent for each numerator in radial alignment therewith, the top member having

an opening in proximity to said series of openings and with which each decimal equivalent registers when its respective numerator is in registration with its opening in the top member.

- 1,461,139. SANITARY APPARATUS FOR WATER-CLOSETS. FRANÇOIS PAUL, Montreal, Quebec, Canada. Filed July 19, 1922. Serial No. 576,097. 2 Claims. (Cl. 4—21.)

1. A device of the character described in combination with a water closet bowl and the ventilation pipe, a pipe leading from said bowl to the ventilation pipe, said ventilation pipe having an opening therein leading into a room; a valve adapted to close said opening; and means including a weighted lever actuated by the movement of the water closet seat to actuate said valve, substantially as described.

- 1,461,140. METHOD OF TREATING FILAMENTS FOR INCANDESCENT ELECTRIC LAMPS. JOHN H. RAMAGE, Norfolk, Va., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Oct. 15, 1917. Serial No. 196,686. 16 Claims. (Cl. 176—132.)

1. A filament of tungsten or equivalent refractory metal consisting of grains substantially uniform in size.

- 1,461,141. NET-PULLING MACHINE. WILLIAM FREDERICK DEPEW, Bowmanville, Ontario, Canada. Filed Apr. 13, 1922. Serial No. 552,247. 1 Claim. (Cl. 254—138.)

In a net pulling machine, the combination with a gripping drum having peripheral means for gripping the edge line of the net, of a driving shaft having a circum-

ferential slotted end upon which the drum is mounted, a projection extending into the slot from said drum, and springs connected at one end to the driving shaft and at

the opposite end to the drum to form a yieldable driving connection between the shaft and the drum when the shaft is rotated.

- 1,461,142. OVEN ATTACHMENT FOR AUTOMOBILES. JAMES E. Z. FOWLE, Preuss, Oreg. Filed Apr. 15, 1922. Serial No. 553,215. 1 Claim. (Cl. 126—20.)

A device of the character described comprising a rectangular casing having its bottom formed with an opening near the back wall of the casing and having its ends formed with notches extending upwardly from the bottom, said opening in the bottom and the notches being designed for accommodation of the exhaust pipe of an engine, the back wall of the casing extending downwardly between the exhaust manifold and the engine whereby to mount the device in place, said casing being of double wall construction and being provided with a foraminous shelf located above the notches, a hinged door normally closing the front of the casing, and brace rods connected with the top of the casing and terminating in hooks engageable over the stay rod of the radiator of the car.

- 1,461,143. INDICATOR FOR VACANT THEATER SEATS. WILFRED L. GUERIN, New Orleans, La., assignor of one-half to Morinville J. Guerin, Jr., New Orleans, La. Filed Dec. 23, 1921. Serial No. 524,431. 5 Claims. (Cl. 177—337.)

1. In a vacant seat indicator for theaters, the combination of a plurality of electric lamps constituting a signal to designate a plurality of separated vacant seats; a second set of electric lamps constituting a second signal to designate vacant seats that are not separated from each other; normally open circuits for each lamp; and

circuit closers provided with means for operating each other and to close said circuits, whereby upon operating a single circuit closer of said first named signal a plu-

rality of separated vacant seats may be simultaneously indicated, and by operating a single circuit closer of said last named signal a plurality of seats not separated from each other may be simultaneously indicated.

1,461,144. SCREEN FOR CORN SHELLERS. RICHARD E. HANNEMAN, East Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Sept. 9, 1920. Serial No. 409,048. 7 Claims. (Cl. 130—19.)

1. The combination with a vibratory screen, of a plurality of dams spaced a distance apart and extending over the surface of the screen and projecting from such surface at different angles, and means for varying the angular position of the dams while maintaining them at different angles relatively to each other.

1,461,145. MOLDING MACHINE. HENRY E. HENRICKS, Oak Park, Ill., assignor of one-third to Arnold H. Schlegel, Oak Park, Ill. Filed July 9, 1920. Serial No. 394,921. 4 Claims. (Cl. 22—36.)

1. In a mold-flask charging apparatus, a support, a horizontal arm extending from the support, a beam swiv-

eled to the arm to swing vertically and horizontally, a hopper and a shaking table carried by the beam, the table discharging into the hopper, means associated with the hopper for forcibly ejecting the contents thereof, a second shaking table carried by the support and discharging on the first-mentioned table, a drive shaft on the support, a counter-shaft on the support obtaining motion from the drive shaft, driving means for the first-mentioned table carried by the aforesaid arm, a driving connection between said means and the counter-shaft, and a driving connection between the drive shaft and the first mentioned table.

1,461,146. MATCH BOX. JOSEPH A. HEY, Decatur, Ill. Filed Sept. 3, 1921. Serial No. 498,432. 2 Claims. (Cl. 206—27.)

1. A match receptacle comprising an open box, a casing and a cover; said box being provided with a channel along one side wall thereof, a longitudinal slot being provided in the side wall adjacent to said channel, said slot opening into said channel, a projection on the side wall of said casing reaching through said slot into said channel, the end wall at the opposite end of the box in respect to said projection having an aperture, yieldable means in said box adapted to partly close said aperture, a tension spring inserted in the length direction of the box between the bottom of said box and the bottom of said casing, and securing means for each end of said spring for attaching said ends to said box and said casing respectively.

1,461,147. WINDOW LOCK. SIGURD JAHR HOFF, New York, N. Y. Filed May 16, 1922. Serial No. 561,313. 3 Claims. (Cl. 292—57.)

1. In combination with a pair of slide sashes, a means for releasably locking both sashes in the closed position comprising an upper sash with a longitudinal slot therein and provided with an angular exit slot at one end thereof, said upper sash having a sunken channel registering with the said slots, an inclined surface formed on one side of the sunken channel and means carried within the channel for locking the upper and lower sashes to each other when in the closed position.

1,461,148. DRYING APPARATUS. JOHN F. HUGHES, Penns Grove, N. J. Filed Oct. 12, 1920. Serial No. 416,357. 11 Claims. (Cl. 34—43.)

3. Apparatus of the character described including a screened member for containing the material to be dried;

heating means adapted to be inserted into the material within the screened member; means for moving said

screened member; and scraping means adapted to scrape the material from the inner surface of the screened member; substantially as described.

1,461,149. APPARATUS FOR CUTTING DIAMONDS. ALFRED T. HUNT, Brooklyn, N. Y. Filed June 24, 1921. Serial No. 480,149. 8 Claims. (Cl. 51-120.)

1. In a machine for cutting diamonds, the combination of a diamond dop for holding a diamond, a cutting wheel for engaging said diamond, means for causing said cutting wheel to rotate upon its own axis, means for causing said wheel to revolve bodily around an axis different from the axis of rotation of said cutting wheel, mechanism for supporting said diamond dop so as to maintain the diamond in a predetermined bodily position, and mechanism controllable at the will of the operator for adjusting said diamond dop to different degrees of inclination relatively to said diamond cutting wheel, without disturbing the general fixed position occupied by said diamond while being cut.

1,461,150. TOBACCO-LEAF-BOOKING MACHINE. GRAHAM H. JACKSON, Newark, N. J., assignor to Universal Tobacco Machine Company, New York, N. Y., a Corporation of New York. Filed Mar. 3, 1921. Serial No. 440,549. 3 Claims. (Cl. 131-56.)

3. In a tobacco leaf booking machine, the combination of a booking drum, and a booking belt passing around

the drum and having a leaf receiving surface which will readily yield to receive the leaves as the book increases

in thickness, and edges of a stiffer material on each side of the book receiving surface by which the booking belt may be driven.

1,461,151. CAN OPENER. HERBERT ELIJAH KEELER, Chicago, Ill. Filed Sept. 20, 1922. Serial No. 589,359. 4 Claims. (Cl. 220-52.)

1. A can opener having a member provided with a slot adapted to receive the tongue of the can closure, the slot being open at the outer end, and an ejector slidably mounted on said member and adapted to engage the can cover to force it off over the end of said member.

1,461,152. ICE PICK. HERBERT ELIJAH KEELER, Chicago, Ill. Filed Feb. 28, 1923. Serial No. 621,877. 5 Claims. (Cl. 83-62.)

3. An ice pick having a pointed rod, a chamfered handle slidably mounted on it and adapted to strike it, a tension spring connected at the lower end to the lower portion of the handle, and a swivel connection between the upper end of the spring and the upper portion of the rod.

1,461,153. HEEL-SEAT LASTING AND NAILING MACHINE. EUGENE L. KEYES, Chicago, Ill., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 22, 1917. Serial No. 208,434. 168 Claims. (Cl. 12—4.)

1. A machine of the class described having, in combination, heel seat lasting mechanism, mechanism for nailing the heel end of the sole over the lasted heel seat, and a shoe support, said mechanisms and support being constructed and arranged for relative movements first to present a supported shoe and said lasting mechanism in co-operative relation and then to present the heel end of the supported shoe and said nailing mechanism in co-operative relation.

1,461,154. WELL-DRILLING TOOL. HENRY B. McGOWAN, Hurley, Okla. Filed May 17, 1922. Serial No. 561,654. 1 Claim. (Cl. 279—101.)

The combination with a bit having the pin and shank thereof oppositely screw-threaded, of a stem having a threaded socket receiving the pin, a sleeve having engagement with the stem limiting its upward movement thereon, securing means engaging the stem and insertable through an opening formed in the wall of the sleeve when the sleeve is in its uppermost position, said securing means when in engagement with the stem limiting the downward movement of the sleeve on the stem with the lower end of the sleeve extending below the lower end of the stem, the lower end of said sleeve having threads for engagement with the threads of the shank of the bit.

1,461,155. METHOD OF AND APPARATUS FOR MANUFACTURING INCANDESCENT LAMPS. HARRY D. MADDEN, Irvington, and JOHN J. HIGGINS, East Orange, N. J., assignors to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Apr. 3, 1919. Serial No. 287,234. 41 Claims. (Cl. 176—2.)

30. The combination in an incandescent lamp-making machine of means for exhausting a bulb and means operating subsequently thereto for sealing a mount within the bulb.

1,461,156. CUSPIDOR. MILTON G. MARTIN, Stevens Point, Wis. Filed Apr. 29, 1920. Serial No. 377,557. 1 Claim. (Cl. 4—38.)

In a cuspidor, a hollow stand having an upper wall forming a vessel open at the bottom and adapted to support a removable receptacle, a relatively heavy base plate, said stand having a lower wall surrounding said base plate, a spider in said vessel bearing upon the inner wall thereof and means for supporting said plate from said spider.

1,461,157. DRAFT-CONTROLLING MEANS FOR TANK HEATERS. GEORGE W. MUNDIE, Peru, Ill. Filed Apr. 7, 1923. Serial No. 630,507. 3 Claims. (Cl. 126—367.)

1. In a tank heater, a fire box, a discharge flue disposed immediately above the fire box, a wall extending

downward from one wall of the discharge flue and having a draft opening therethrough, and a baffle extend-

ing transversely through the axis of the discharge flue and from the lower end of the wall and defining a return flue between it and the top of the heater.

- 1,461,158. GARAGE-DOOR LOCK. CARL C. PARKE, Denver, Colo. Filed Dec. 6, 1920. Serial No. 428,471. 2 Claims. (Cl. 20-16.)

2. A locking means for a door, comprising one member adapted to be secured to the door and having one end inclined at an angle to the main portion thereof, a similarly angled second member adapted to be secured to the door casing, the inclined ends of said members being formed to interlock for the purpose of holding a door in closed position after the hinges have been removed.

- 1,461,159. MACHINE FOR MAKING BRICKS, TILES, AND OTHER BUILDING MATERIALS. GEORGES VALENTIN PICOT, Paris, France. Filed Aug. 29, 1921. Serial No. 496,604. 2 Claims. (Cl. 25-69.)

1. In a hollow-block machine, the combination of compression mechanism embodying a pair of vertical

guides, a vertically-reciprocating cross-head slidably connected at opposite ends therewith and provided with a vertical core, and a tie-plate connecting the upper ends of the guides and having a slot conforming to the size and shape of the core and disposed directly in line therewith; and a mould carrier disposed between the cross-head and the tie-plate and having a plurality of moulds at top and bottom, said carrier being movable relatively to the cross-head to bring the moulds successively into position directly in line with said core and tie-plate, thereby to enable the core to move into and through the material in the mould thereover and into the slot in the tie-plate during the upward movement of the cross-head, and the tie-plate to close the upper end of that mould at such time.

- 1,461,160. VEGETABLE SLICER. RAPHAEL A. PORTER, Payson, Utah. Filed Nov. 15, 1922. Serial No. 601,105. 9 Claims. (Cl. 146-7.)

6. A vegetable cutter including coating frames, one of said frames being formed of separate sections shiftable away from each other, means acting when said frames are forced toward each other to cause the sections of the first named frame to be forced away from each other, and a series of blades carried by the first named frame, the separation of said sections acting to tension the blades.

- 1,461,161. SURGICAL APPLIANCE, BRACE, AND SOCKET FOR ARMS AND LEGS. ROBERT WILLIAM REED, Rochester, Minn. Filed June 10, 1921. Serial No. 476,634. 6 Claims. (Cl. 128-90.)

1. An appliance of the class described comprising superimposed layers of stripped, open mesh fabric laid in non-inflammable celluloid and having embodied therein a sheet of rawhide stretched and moulded and covered with a close mesh fabric and united to its adjacent layers.

- 1,461,162. CAN OPENER. LEWIS D. ROBERTS, Washington, D. C. Filed Mar. 19, 1923. Serial No. 626,201. 3 Claims. (Cl. 30-3.)

1. In a device of the class described, a single strip of metal bent to provide a grip at one end, a transverse bearing wing at the other end, an intermediate channel, there being a slot in the intermediate wall of the chan-

nel extending up to the wing, those portions of the channel at the sides of the slot being bulged laterally and arched, a cutting blade having a head fitted snugly

within the channel with one straight edge bearing throughout the length of the head against the intermediate wall of the channel, and a fastening means extending transversely through the channel and head.

1,461,163. AUTOMATIC FLUSHING APPARATUS. ARTHUR WILLIAM ROBINSON, San Antonio, Tex. Filed May 24, 1921. Serial No. 472,289. 1 Claim. (Cl. 137-93.)

An automatic flushing apparatus including a water-inlet cylinder having a valve seat, a valve for said seat, a vacuum chamber having an air port at its outer end, an air piston within said chamber, a depressible rod connecting the said valve and piston and extending exteriorly of the said chamber, a spring normally positioning the said rod to seat the valve and to locate the said piston at the outer end of the vacuum chamber, a spud at one side of the said chamber and adjacent the inner end thereof, said spud presenting air passages communicating separately with the interior of the chamber below the piston to provide respectively an air outlet and an air inlet, a self-closing valve normally closing the said air outlet and automatically operable upon the downward movement of the piston to uncover the outlet, and means for varying the effective area of the said air inlet.

1,461,164. METHOD OF CONDENSING FLUIDS. CHARLES E. ROGERS, Detroit, Mich. Filed Feb. 7, 1919. Serial No. 275,498. 6 Claims. (Cl. 99-5.)

3. The method of condensing fluids consisting in heating a body of the fluid to a temperature not to exceed 160 degrees F. in a chamber, pumping the fluid from the bottom of the said chamber and spraying it upward therein to fall by gravity into the body of fluid, and passing air therethrough and over the surface of the heated liquid body of a temperature below the temperature of

the liquid and having an avidity for moisture, the air tending to chill the sprayed liquid which is reheated as it falls into the body thereof and is again sprayed

and exposed to the moisture absorbing air, the process continuing until the entire body of the liquid is condensed to the desired extent.

1,461,165. TRACK SIGNAL. LEROY S. SNELL, Utica, N. Y. Filed June 14, 1921. Serial No. 477,435. 2 Claims. (Cl. 246-211.)

1. A track signalling mechanism including a torpedo-carrying bar, uprights on which said bar is slidable, a pin extending laterally from the bar and disposed intermediate said uprights, said pin adapted to engage the uprights to limit movement of the bar in opposite directions, signals in electric circuits having spaced contacts on said bars and adapted to be engaged by said pin to close said circuits.

1,461,166. CUSHIONED HUB. CHARLES E. SOPER, Elmira, N. Y. Filed Mar. 1, 1922. Serial No. 540,260. 2 Claims. (Cl. 152-43.)

1. In a wheel structure, a hub, a collar, a cushioning element of yieldable material fitted within said collar, said element having a bore through which the hub is snugly disposed, said cushioning element being under compression within the collar, a rim, means for opera-

tively engaging said rim with the collar, said hub being provided with outstanding spaced flanges between which the cushioning element and collar are positioned, said cushioning element being of a length less than the distance between the flanges, and members disposed through the flanges and cushioning element for holding the cushioning element in applied position.

1,461,167. CARBONACEOUS FUEL. WALTER EDWIN TRENT, Washington, D. C. Filed June 19, 1922. Serial No. 569,329. 7 Claims. (Cl. 44—1.)

2. A composite fuel of a plastic consistency and composed principally of finely divided carbonaceous material, oil and water, the oil content of the fuel being of a quantity constituting at least 15 per cent of the mass by weight.

1,461,168. SAFETY RAZOR. JAMES ALEX DENBY WATT, London, England, assignor to Super Razors Incorporated, New York, N. Y. Filed Mar. 28, 1921. Serial No. 456,467. 1 Claim. (Cl. 30—12.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

A safety razor of the kind herein specified comprising a blade carrier, a blade pivotally mounted therein, a blade guard disposed below said blade carrier, said blade carrier and blade guard being adjustable across the longitudinal axis of the razor handle, an index pointer on said blade carrier, a headed screw coupling the said carrier with the said guard, and a graduated scale on the said screw adapted to register with the said index pointer for indicating the degree of adjustment obtained between the blade carrier and the blade guard.

1,461,169. INSECT CATCHER. WALTER C. WILSON, Montello, Nev. Filed Aug. 11, 1922. Serial No. 581,097. 3 Claims. (Cl. 43—113.)

3. An insect catching device of the character described, comprising a horizontal portion composed of a rebent strand of wire, said horizontal portion intermediate its ends being looped to receive a lamp socket, a handle at one side of said loop, the wire projecting from the opposite side of said loop terminating in sharpened end portions, and a sheet of insect catching material detachably fastened to said sharpened end portion.

1,461,170. CLEANING FLUID FOR IMPREGNATING DUST CLOTHS AND THE LIKE. FRANK ALVIN WRIGHT, Hutchinson, Kans. Filed May 11, 1921. Serial No. 468,626. 1 Claim. (Cl. 87—5.)

A cleaning fluid for impregnating dust cloths, consisting of crude oil, gasoline, raw linseed oil and oil of cassia in about the proportions of one gallon of crude oil, one-half gallon of gasoline and four ounces of raw linseed oil, approximately two drops of oil of cassia being added for each four square feet of cloth.

1,461,171. NUT-TAPPING MACHINE. RUFUS F. BAENES, Springfield, Mass. Filed Mar. 16, 1921. Serial No. 452,861. 4 Claims. (Cl. 10—136.)

4. In a nut tapping machine, the combination with a tap spindle and a gear shifting lever operable thereby, of a nut blank feeding mechanism including a magazine, a plunger operable to push the blanks successively from the magazine into position beneath the tap, a rotatable element having a radial arm, a pivoted lever connected with the plunger, a spring for retracting the plunger into position behind a nut blank, and a pin on the shift-lever for moving the disk to actuate the plunger.

1,461,172. STOP MOTION FOR KNITTING MACHINES. WILLIAM T. BARRATT, Bennington, Vt. Filed Nov. 18, 1921. Serial No. 516,040. 25 Claims. (Cl. 66—7.)

1. A stop motion mechanism for a knitting machine having, in combination, a driving shaft, a rotary stop member, a normally stationary stop member adjacent thereto, a guide for a strand of yarn, a pivotally mounted member to which said yarn guide is attached, locking means actuated by said pivotally mounted member and normally held out of engagement with said stop members by said strand of yarn when under tension

during the operation of said knitting machine, said locking means being adapted to be moved by said pivotally mounted member into interlocking engagement with said stops when allowed by said yarn so to do, whereby the rotation of said rotary stop member may be stopped, and mechanism actuated by the stopping of said rotary stop member constructed and arranged to stop the rotation of said shaft.

- 1,461,173. SUCTION CLEANER. ASHLEY C. BENNETT, Minneapolis, Minn. Filed Sept. 4, 1917. Serial No. 189,449. 2 Claims. (Cl. 15—16.)

1. A suction cleaner for carpets, rugs and the like comprising a pair of chambers having integrally united walls, one of which is vertically cylindrical, and having means connecting the top of the vertical chamber with the other chamber, a tubular arm connected to the upper portion of the vertical chamber, a suction head on said arm having means engaging the floor so as to support the front end of said casing and having communication through the arm with the interior of the vertical chamber, means in the other chamber for inducing a current of air to pass through the suction head, arm, vertical chamber and other chamber and to discharge therefrom to atmosphere, and means in the vertical chamber for causing gravity separation of dust carried by said induced current.

- 1,461,174. AIR CLEANER. ASHLEY C. BENNETT, Minneapolis, Minn., assignor to Irene E. Bennett, Minneapolis, Minn. Filed Sept. 8, 1917. Serial No. 190,393. 7 Claims. (Cl. 183—24.)

1. An air cleaner comprising a casing adapted to contain a body of liquid therein, means for connecting the casing with an air-current inducing means, means for admitting outside air into the casing and conveying it into said body of liquid, and a casing within the first-named casing through which the air is directed after it leaves said liquid to cause said air to turn in the form of a cyclone to separate excess moisture and solids from said air.

- 1,461,175. HINGE. EDGAR B. BICKER, St. Louis, Mo. Filed Apr. 17, 1922. Serial No. 554,353. 2 Claims. (Cl. 229—44.)

2. A hinge plate having a marginal cut out, a pintle whose sides are wholly freed from the plate and whose ends are integrally connected with the plate for portions only of its width, and said pintle being sectionally arcuated.

- 1,461,176. NEEDLE CHUCK FOR SOUND REPRODUCERS. JOHN WESLEY BOOTH, Trenton, Ontario, Canada. Original application filed Nov. 1, 1920, Serial No. 421,070. Divided and this application filed Apr. 25, 1921. Serial No. 464,353. 1 Claim. (Cl. 274—37.)

In a sound reproducer, a needle, a chuck comprising a core adapted to support the needle, a sleeve adjustably supporting the core and permitting it to turn through part of a revolution whereby the position of the needle may be adjusted, and means for retaining the core in position in the sleeve.

- 1,461,177. AUTOMATIC BELL RINGER. JOSEPH W. BUCKLAND, Montreal, Quebec, Canada. Filed Mar. 5, 1921. Serial No. 449,967. 8 Claims. (Cl. 121—2.)

1. In an automatic bell-ringer the combination with a cylinder, a hollow piston mounted within said cylinder, a second piston slidably mounted within the hollow piston and adapted to coact with the latter in creating a vacuum when moved relatively thereto in one direction, means operatively connecting one of said pistons to the bell, and means whereby said pistons are actuated.

1,461,178. ALLOY. HUGH S. COOPER, Cleveland, Ohio, assignor, by mesne assignments, to Kemet Laboratories Company Inc., a Corporation of New York. Filed Aug. 26, 1918. Serial No. 251,375. 9 Claims. (Cl. 75—1.)

1. An alloy composed of a preponderating amount of nickel, aluminum and silicon in which the percentage of either of the last two substances is not less than three percent and not more than twelve percent.

1,461,179. FIGURE TOY. THOMAS W. CRENSHAW and WILLIE J. CRENSHAW, Clarksville, Tex. Filed Apr. 30, 1921. Serial No. 465,676. 2 Claims. (Cl. 46—14.)

1. In a wind-operated figure toy, a support, a member pivoted to the support to swing in a horizontal plane and provided at one end thereof with a guiding vane, a shaft rotatably mounted in the opposite end of the member and having a wind-wheel secured thereto, braces extending upwardly from the member a crank shaft rotatably mounted in the braces, a driving connection between the wind wheel and crank shaft, horizontal braces extending outwardly from the side of the member, a figure toy embodying legs rigidly secured to said horizontal braces, a body pivotally connected to the upper end of the legs, and arms pivotally connected to the body and having the free extremities thereof pivotally connected with the crank of said crank shaft, said body embodying a head having a projection thereon adapted to engage against the crank of the crank shaft to support the body and prevent excessive pivotal movement thereof.

1,461,180. RAILROAD-CROSSING SIGNAL. JOSEPH B. DE LUCA, Philadelphia, Pa. Filed May 9, 1921. Serial No. 467,938. 1 Claim. (Cl. 246—473.)

A device of the class described comprising a box-shaped casing having two opposing side walls of transparent material and provided with appropriate warnings, the other walls of the casing being opaque and an illuminating medium on the central vertical axis within the casing; another illuminating medium carried by said casing exteriorly thereof, but situated on the same ver-

tical axis, a pair of screens attached to said casing having concave surfaces directed towards said second illuminating medium and spaced symmetrically across a plane running parallel to said transparent side walls and through said axis, said concave surfaces having their foci situated in said plane.

1,461,181. DYNAMO DRIVEN BY WHEEL AXLE. EMIL DICK, Geneva, Switzerland. Filed Oct. 16, 1922. Serial No. 594,751. 5 Claims. (Cl. 105—102.)

1. In a dynamo having a housing arranged to be pivotally suspended from a support, the combination with the housing and the armature journaled therein, of a gear-case on the housing at one end thereof, a counter-shaft journaled in the gear-case and carrying a pulley outside the latter, and toothed-wheel gearing in said gear-case operatively connecting the countershaft with the armature shaft.

1,461,182. ROOF-PLATE FORM. LARS ENGSETH, Seattle, Wash. Filed Oct. 5, 1922. Serial No. 592,653. 3 Claims. (Cl. 108—10.)

1. A roof plate comprising a thick end having a cutaway portion at one end with a recess adjacent thereto and communicating with the cutaway portion, and a thin end having a thin projecting strip in alignment with the recess, one side edge of the plate having a vertical flange, and the opposite side edge of said plate having a turned flange.

1,461,183. SUBSTATION CIRCUIT. HARVEY FLETCHER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 15, 1920. Serial No. 430,842. 7 Claims. (Cl. 179—81.)

1. The method of operating a substation circuit including a transmitter element for converting sound waves

into electric current variations and a receiver element for converting electric current variations into sound waves, which comprises normally maintaining the transmitter element and the receiver element connected in series across a line with the transmitter element short-circuited for alternating current, and changing the circuit connections, in response to operation of the transmitter element, to effectively connect the transmitter element across the line for locally generated signaling current.

1,461,184. ABRASIVE-WHEEL CHUCK FOR GRINDING MACHINES. FREDERIC E. GARDNER, Beloit, Wis. Filed June 14, 1920. Serial No. 388,772. 13 Claims. (Cl. 51—209.)

1. A device of the character described comprising, in combination, a shell having a back plate and a rim comprising spaced cylindrical segments, a ring mounted upon said shell and enclosing said rim, and a plurality of independent clamping elements supported on said ring between said segments.

1,461,185. MEDICINAL DEVICE. SIMON GLICKSON, Chicago, Ill. Filed May 29, 1922. Serial No. 564,612. 5 Claims. (Cl. 128—260.)

1. The herein described method of preparing and preserving medicine for use which consists in arranging medicine in dry form in a collapsible compartment of a container, the compartment being connected with a compartment containing a liquid closing off communication between the two compartments by compressing the collapsible compartment at its juncture with the liquid container and when it is desired to expel the medicine for use relieving said compression to allow the liquid to contact with the dry medicine and then expelling the medicine from the container by compressing the collapsible compartment.

1,461,186. RAIL JACK. FREDERICK HACHMANN, St. Louis, Mo., assignor of two-tenths to Thomas T. Richards, St. Louis, Mo., one-tenth to Addie Koelling, one-tenth to Hilda Houchens, two-tenths to John H. Bierbaum, all of Marthasville, Mo., two-tenths to Robert E. Einstein and one-tenth to Philip R. Walsh, both of St. Louis, Mo. Filed Mar. 20, 1922. Serial No. 545,073. 3 Claims. (Cl. 254—44.)

1. A jack comprising a support having a substantially vertical web, a semi-circular bearing formed throughout the web, said bearing being provided with rearwardly inclined slots, a lever provided with a semi-circular integral bearing adapted to be seated on the bearing formed in the web, and a series of transverse shoulders formed on the forward end of said lever, certain of said shoulders being adapted to engage beneath the ball of a rail, and the others to engage the web thereof.

1,461,187. METHOD OF MAINTAINING A SOURCE OF LIGHT IN A DESIRED POSITION IN LANTERNS. CLINTON O. HARRINGTON, Chicago, Ill., assignor to Aldobilt Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 22, 1921. Serial No. 454,444. 7 Claims. (Cl. 88—14.)

1. The method of maintaining, by replacement of the light-giving member, a source of light provided by such light-giving member and a light-projecting member substantially in a desired critical relative position with respect to each other and in which replacement the second light-giving member would not provide the source of light substantially in its desired critical relative position with respect to the light-projecting member without adjustment of one of said members relative to the other, which comprises, first, placing, in any approved way, the source of light provided by such light-giving

member and the light-projecting member substantially in their desired critical relative position with respect to each other; second, recording this critical relative position according to the readings of an optical instrument seated on a part of the lantern in a definite relative position and adapted to indicate various relative positions of the source of light from such light-giving member with respect to the light-projecting member; third, replacing the first light-giving member by a second light-giving member; and, fourth, adjusting one of said members relative to the other while the person making the adjustments observes from such optical instrument, while the adjustments are being made, the effect of such adjustments and until the instrument readings of such optical instrument therefrom substantially coincide with the record made according to the second step hereof.

1,461,188. VALVE. FRED B. HAYES, Fort Wayne, Ind., assignor to The Western Gas Construction Company, Fort Wayne, Ind., a Corporation of Indiana. Filed Feb. 12, 1920. Serial No. 358,096. 13 Claims. (Cl. 251-74.)

1. A valve housing comprising two plates secured together to form a shallow interior chamber, each plate provided with an upper and a lower aperture there-through, a single, thin, rocking valve disc or gate movable edgewise in said chamber, and adapted to close either of said apertures, and means for actuating said valve disc, said chamber being substantially the same size between said plates as the thickness of the valve disc.

1,461,189. NOVELTY HEADWEAR. PAUL M. HENNEGAN, Cincinnati, Ohio. Filed June 28, 1921. Serial No. 481,105. 1 Claim. (Cl. 2-106.)

A hat of the character described including a central crown portion of substantially oval shape and having pointed ends, said crown, portion being folded longitudinally on the fold line extending from one pointed end to the other, side flaps of substantially rectangular shape arranged on opposite sides of the crown portion, said side flaps being connected to the crown portion at the central portions of said side flaps only, and securing flaps arranged at the ends of the side flaps and connect-

ing the ends of the side flaps together, the upper edges of the side flaps being of irregular shape to provide ornamentation, the front and rear portions of the upper edges of the side flaps being free from the crown portion in order to permit the crown portion to be folded.

1,461,190. VACUUM PUMP. WILLIAM G. HOUSKEEPER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 16, 1921. Serial No. 478,021. 18 Claims. (Cl. 230-13.)

1. In a pump, a container of insulating material, a plurality of puddles of pumping material in said container, means for heating said pumping material, and electrical connections whereby an arc may be established between said puddles.

1,461,191. GAS HEATER. HUBERT R. HUMPHREY, Kalamazoo, Mich., assignor to General Gas Light Company, Kalamazoo, Mich. Filed Feb. 2, 1922. Serial No. 533,652. 9 Claims. (Cl. 126-92.)

3. In a gas heater, the combination of a frame, a fire-back mounted within said frame, radiating elements disposed in front of said fire-back, a burner comprising a burner body having a plurality of burner tubes provided with tips adapted to be aligned with the radiating elements, a gas manifold provided with a plurality of gas nozzles coacting with said burner tubes, and spaced slideways between which said burner body is slidably supported, said ways projecting at one end of said frame so that the burner may be adjusted to a position within the frame with its tips aligned with the radiating elements or withdrawn from the frame as a complete operative unit independently of said radiating elements.

1,461,192. GAS HEATER. HUBERT R. HUMPHREY, Kalamazoo, Mich., assignor to General Gas Light Company, Kalamazoo, Mich. Filed Oct. 23, 1922. Serial No. 596,414. 4 Claims. (Cl. 126—92.)

4. In a gas heater, the combination with rear and side walls, of a front frame secured thereto comprising side members and a horizontal frame member extending between the side members, a burner arranged and housed within said walls and frame below said supporting plate, there being an opening between said supporting plate and said front frame side and front members affording access to the burner, and a removable hearth plate constituting a closure for said opening.

1,461,193. PNEUMATIC TOY. HANS LARSEN, Racine, Wis. Filed Feb. 10, 1922. Serial No. 535,521. 1 Claim. (Cl. 46—40.)

The combination with a pneumatic toy comprising a body portion having an opening surrounded by outwardly projecting flanges, of a plug secured within said opening, said plug having a smooth cylindrical surface and having a duct extending longitudinally inwardly from its outer end and terminating in a laterally extending aperture, an elastic sleeve surrounding the plug and yieldably covering the inner end of the duct, and a binding element surrounding said flanges and binding said flanges against said sleeve and said sleeve against said plug.

1,461,194. SPLIT-RIM TOOL. ALBERT L. LEVY, Youngstown, Ohio. Filed Mar. 28, 1922. Serial No. 547,889. 7 Claims. (Cl. 157—1.)

1. A rim tool comprising relatively movable members, lazy tongs pivotally mounted on the said members and rim engaging elements carried by the lazy tongs.

1,461,195. FASTENING MEANS FOR SHIPS' PLATES. WALDEMAR MEYER, Woodhaven, N. Y. Filed Oct. 15, 1920. Serial No. 417,239. 7 Claims. (Cl. 85—7.)

1. The combination with a bolt, of a curved wedge cooperating therewith and a member adapted to bear against the work and having a curved seat for the said wedge.

1,461,196. DOOR CONSTRUCTION. NATHAN PAINE, Oshkosh, Wis. Filed Oct. 7, 1921. Serial No. 506,142. 1 Claim. (Cl. 20—35.)

A door comprising an outer frame, an inner frame having a tongue and groove connection therewith and formed of strips mitered together, said inner frame being of material considerably thinner than the outer frame whereby projecting shoulders are produced, molding strips forming fillets along the shoulders, the inner edges of the strips forming the inner frame being molded and grooved, and a panel fitting in the groove thereof.

1,461,197. SIGNAL AND GUIDE LIGHT FOR MOTOR VEHICLES. ANNA PARLOW, Coello, Ill. Filed Sept. 12, 1922. Serial No. 587,724. 1 Claim. (Cl. 240—41.)

In combination with the main right and left headlights of a motor vehicle mounted in fixed position at the front of the vehicle to illuminate the road directly ahead of the latter, of an auxiliary curve illuminating lamp mounted on top of the casing of each main headlight, said curve illuminating lamps being arranged in forwardly converging relation whereby the paths of their rays cross each other for utilizing the lamp on the right headlight to illuminate a left-hand curve and

the lamp on the left headlight to illuminate a right-hand curve, the mountings of the lamps permitting rotary adjustment of the latter about a vertical axis whereby the desired degree of convergence of said lamps may be had, at will, and means to secure said lamps in adjusted

position, each lamp mounting further embodying an inverted U-shaped bracket fixed on the headlight casing and having an integral central hollow boss and a vertical depending stem rigid with the casing of the lamp and rotatably positioned in said boss.

- 1,461,198. CONTROLLING DEVICE FOR DRAWN IMPLEMENTS. VITAL PELLISSIER, Merced, Calif. Filed Dec. 5, 1921. Serial No. 520,016. 6 Claims. (Cl. 37—124.)

1. A control device for drawn implements comprising a beam universally mounted to a draft vehicle and projecting rearwardly therefrom, a carriage mounted for longitudinal movement on the beam and adapted to be connected to an operating lever of the drawn implement, and means operable from the draft vehicle for moving the carriage in either direction.

- 1,461,199. BEDCLOTHES HOLDER. CHARLES N. PROUTY, Spencer, Mass. Filed Apr. 28, 1919, Serial No. 293,192. Renewed Dec. 5, 1922. 5 Claims. (Cl. 5—22.)

clamping member can be moved away from the frame, or whereby the clamping member can be clamped to the frame at a plurality of points.

- 1,461,200. PRESSURE GAUGE. KNUT R. STRANDELL, Syracuse, N. Y. Filed Feb. 2, 1921. Serial No. 441,916. 3 Claims. (Cl. 73—109.)

1. A pressure gauge comprising a casing, a Bourdon tube in the casing, the casing being formed with an arc shaped chamber in which the tube is located, a dial plate on the front of the casing, an indicator movable over the dial and mechanism in the rear of the plate and outside of said chamber for actuating the indicator, said mechanism comprising a rock shaft extending through a wall of said chamber and connected to the Bourdon tube to be rocked thereby.

- 1,461,201. MEANS FOR ATTACHING STEEL CAR ENDS. WILLIAM E. VAN DORN, Chicago, Ill. Original application filed Nov. 19, 1920, Serial No. 425,040. Divided and this application filed Feb. 17, 1921. Serial No. 445,682. 16 Claims. (Cl. 105—410.)

1. The combination with the side walls of a car body, of a sheet metal end having its side marginal portions flanged to engage with the outer faces of said side walls, said end having transverse corrugations bent lengthwise so as to bring the ends on the inner side of the plane of the sheet and the middle portion on the outer side of the plane of the sheet, and reinforcing elements lying within the corners formed by the said walls and said end and secured respectively to the end portions of the corrugations and to the said side walls.

- 1,461,202. BORING BAR AND THE LIKE. ALAN E. VOSBURG and ROBERT B. WHITNEY, Detroit, Mich., assignors to Arthur V. Hannifan, Chicago, Ill. Filed Apr. 26, 1922. Serial No. 556,775. 11 Claims. (Cl. 77—58.)

1. In a boring bar the combination of a shaft having a transverse slot with radial end walls, a tool block seated within said slot and fully occupying the axial dimension of the slot, a pair of cutting tools mounted within the tool block, means within the tool block for adjusting said tools towards and from each other, means within the tool block for locking the tools, there being a transversely extending hole in the shaft communicating axially with the transverse slot, there being a tapered recess in the face centrally of the tool block in position to register with said hole, a centering pin extending loosely through the hole and having its inner end tapered and adapted to wedge into the recess of the tool block and having its outer end loosely in threaded engagement

with the shaft, means for exactly centering the position of said pin with respect to the axis of the shaft comprising a collar mounted in the shaft and through which the pin extends in accurate fashion, and a pair of opposing screws in the shaft working on opposite sides of the collar, means for sealing over said set screws, there

being an axial recess in the wall of the passage aforesaid, and there being an axial recess in the end portion of the pin, said recesses being relatively so positioned that when the pin is jammed into the recess of the tool block said recesses are out of register, substantially as described.

1,461,203. LINK FOR EXPANSIBLE BRACELETS. GEORGE J. BAUER, Pawtucket, and FRANK B. CARLSON, Providence, R. I. Filed July 26, 1922. Serial No. 577,616. 4 Claims. (Cl. 59—79.)

1. In combination, a platen provided with overturned parallel flanges on its longitudinal edges, a pair of loop links slidably engaged with said flanges, the ends of the plate having overturned flanges of lengths substantially equal to the width between the sides of the loop links, said end flanges engaging between the sides of the loop links, a back plate overlying the adjacent ends of the loop links and engaging under the longitudinal and end flanges.

1,461,204. SIGNALING SYSTEM. JOHN H. BELL, South Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 17, 1920. Serial No. 374,596. 14 Claims. (Cl. 178—23.)

11. In combination with a printer mechanism, a line, a plurality of relays, a distributor, a switch controlling

the connection of said printer mechanism and said relays with said distributor, a signaling device, and means operated due to the energization of certain ones of said relays and rendered effective only upon the successive reenergization of such relays a definite number of times for causing the operation of said signaling device.

1,461,205. SPOOLING MACHINE. LOUIS BERZON, Philadelphia, Pa., assignor of one-third to himself, one-third to Joseph Brezin, and one-third to William Kosakoff, all of Philadelphia, Pa. Filed July 28, 1922. Serial No. 578,036. 5 Claims. (Cl. 242—39.)

1. In a yarn spooling machine, a spool, means to drive the spool, a thread of yarn to be spooled, means to reciprocate the thread of yarn in its passage to the spool longitudinally thereof during the winding operation, and means actuated by the reciprocated thread of yarn in its passage to the spool adapted to interrupt the drive of the spool.

1,461,206. BURGLAR ALARM. JAMES EDWARD BOND, Sawtelle, Calif. Filed June 28, 1921. Serial No. 480,986. 9 Claims. (Cl. 116—88.)

8. A burglar alarm comprising a base adapted to be attached to a door or window frame, said base having a cartridge chamber therein, a firing pin for discharging a cartridge in said chamber, a bifurcated post secured to said base, a hammer pivoted to said post and having a shoulder, a rod pivoted to said shoulder, a tube telescoping said rod and pivotally connected to said post; a spring under tension arranged between the pivoted end of said rod and the base of said tube; said spring adapted to hold said hammer in striking position; and means whereby opening of a door or window will cause said spring to actuate said hammer against said pin.

1,461,207. AUTOMATIC ELECTRIC-CIRCUIT-CONTROL MECHANISM. FRANK J. BONK and ARTHUR W. STEWART, Ripon, Wis. Filed Dec. 19, 1921. Serial No. 523,468. 1 Claim. (Cl. 177—346.)

In a sign flashing mechanism, a contact drum, a motor for actuating said drum, a source of current supply con-

nected in circuit with the sign, said drum and said motor, a switching device connected in the circuit, a screw shaft driven from said motor and simultaneously with said drum, a threaded member predeterminedly mounted on and movable by said shaft for actuating said switching device for effecting the opening of the

circuit after a predetermined time period of operation of said flashing mechanism, and a bar extending parallel to said shaft and having scale graduations thereon in hours and fractions thereof for the setting of said detent for predetermined periods of operation of said flashing mechanism.

- 1,461,208. SILO-DOOR FRAME. CASPER M. B. BOOS, Chicago, Ill. Filed Aug. 31, 1921. Serial No. 497,167. 8 Claims. (Cl. 72-6.)

1. In a structure of the character described, a frame comprising pairs of spaced angle-irons at the sides of the frame, spaced members of pre-determined lengths connected to said angle-irons for holding the angle-irons a given distance apart to provide for adjustably connecting stay means in the pairs of angle-irons, and stay means adjustably connected thereto.

- 1,461,209. DETACHABLE HOLDER FOR DENTAL IMPRESSION TRAYS. JOSIAH S. BRIDGES, Chicago, Ill. Filed Mar. 13, 1922. Serial No. 543,186. 5 Claims. (Cl. 32-6.)

1. A detachable holder for dental impression trays, provided with branching arms and having closed slots

adjacent the ends of said arms and at a point intermediate thereof for detachably securing the tray to the holder in its operative position against accidental detachment.

- 1,461,210. BRACKET. JOHN T. CORLEY, Providence, R. I. Filed Sept. 25, 1922. Serial No. 590,335. 2 Claims. (Cl. 280-87.)

1. A bracket formed of bendable metal having a yoke portion adapted to embrace the steering column of a motor vehicle, a cap removably secured to said yoke to bind the column therein, a short neck portion on said bracket having laterally-extending fastening flanges on its upper end, said neck portion having its side edges turned back forming a trough in the under side thereof which gradually increases in depth from the flange to said yoke portion whereby said neck portion is adapted to be bent or twisted relative to the yoke portion to conform to the varying planes of the different fastening bases.

- 1,461,211. FIREPLACE. WALTER E. DE ARMOND, Knoxville, Tenn. Filed Feb. 20, 1922. Serial No. 538,070. 34 Claims. (Cl. 126-132.)

1. In a structure of the kind described, the combination of upright side members, upright intermediate members bearing against each other and the side members and having their upper and lower and back faces and the upper parts of their front faces approximately even with the corresponding faces of the side members and being channeled on their side faces, the upper ends of the channels opening through the upper faces of said members, and means for securing said side members and said intermediate members to each other, substantially as described.

1,461,212. TELEPHONE-EXCHANGE LINE SWITCH. HENRY F. DOBBIN, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 24, 1920. Serial No. 405,626. 12 Claims. (Cl. 179—27.5.)

1. In a switch, a stationary contact, a moveable contact member operably associated with said stationary contact, means for moving said contact member relative to said stationary contact, means operable to restrain said contact member from movement relative to said stationary contact, and means conjointly associated with said first mentioned means and said contact member whereby said contact member when not restrained is moved simultaneously with said first mentioned means and whereby when said contact member is restrained said first mentioned means can be moved independently thereof.

1,461,213. SUPERHEATER. GEORGE P. DRAYO, Milwaukee, Wis. Filed July 3, 1919, Serial No. 308,568. Renewed Oct. 25, 1920. Serial No. 419,488. 4 Claims. (Cl. 22—460.)

1. In a superheater the combination of an inlet chamber, a heating tube connected at one end with said chamber and having an outlet at the other end, a perforated core pipe extending from said chamber with which it communicates at one end into the heating tube with which it forms an annular passage of enlarged size adjacent the

outlet end of the heating tube, and a bushing interposed between the heating tube and core pipe adjacent its inlet end and formed with an opening from said chamber into said passage.

1,461,214. WIRE DISTRIBUTOR. JOHN W. HENDRIX, Baldwin, Miss. Filed June 18, 1919. Serial No. 305,118. 1 Claim. (Cl. 254—77.)

A wire distributor and stretcher comprising a pair of parallel side members each having a handle formed on one end, each of said side members having their lower end portions cut away to provide flat ground engaging runners and sharp ground penetrating prongs, a distributing reel rotatably mounted between said side members, said reel being provided with spaced radial arms at each of its ends, said side members extending a distance beyond the distributing reel, and the arms of the reel adapted to be thrust into engagement with the ground to prevent the reel rotating and to permit of stretching of the wire, and the penetrating end of the side members being engageable with the ground when the reel is elevated and adapting the device for further stretching of the wire owing to the leverage obtainable by using the side members as stretching levers.

1,461,215. SIGNAL. JOHN H. HUNT, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, a Corporation of Ohio. Filed Sept. 30, 1918. Serial No. 256,162. 1 Claim. (Cl. 177—311.)

In an electrical system a generator, a storage battery and electrical signaling means for indicating when the battery is discharging through said generator, said signaling means including an electromagnet comprising a core and an electromagnetic winding, an armature for said magnet, a switch comprising a contact carried by said armature and a stationary contact and means for yieldingly holding said contacts together; a circuit connecting said battery to said generator and including said electro-magnetic winding and said switch in series, whereby the circuit will be intermittently opened when said magnet is energized and an indication will be given by the striking of the contacts against each other; and a polarizing winding on said magnet core connected across the terminals of said generator to prevent said magnet from attracting its armature when current is flowing from said generator to said battery and to permit it to attract its armature when current is flowing from said battery to said generator.

- 1,461,216. SAFETY DEVICE FOR FLYING MACHINES. SIDNEY D. JACOBSON, New York, N. Y. Filed Mar. 25, 1922. Serial No. 546,571. 6 Claims. (Cl. 244—21.)

4. In a flying machine, a source of supply of inflating gas under pressure, a plurality of inflatable members attached to said flying machine, each of said inflatable members comprising a false plane member and associated flexible members forming a balloon compartment, locking means for normally maintaining said inflatable members in deflated condition, means for releasing said locking means to permit the inflation of said inflatable members, and means associated with said releasing means and cooperating therewith for bringing said inflatable members into communication with said source of supply of inflating gas to inflate said inflatable members.

- 1,461,217. PUNCTUREPROOF RELINER FOR PNEUMATIC TIRES AND CASINGS. DAVID L. LAZERICK, Cleveland, Ohio. Filed Jan. 30, 1922. Serial No. 532,594. 1 Claim. (Cl. 152—18.)

A shield for a pneumatic tire or tube comprising a band of thin sheet metal curved to conform to the circumferential curves of said tube and tire, said band provided with parallel arcuate marginal slits, alternate slits being cut from opposite edges of said shield, said slits overlapping each other beyond the axial center of the band at their outer ends, the tongues separated by said slits having their adjoining edges overlapping and the rear edge of each tongue overlapping the forward edge of the next adjoining tongue, the extremities of said slits extending rearwardly upon the road side of said tire.

- 1,461,218. GAME. RUDOLPH N. MAXWELL, Cincinnati, Ohio. Filed June 28, 1922. Serial No. 571,365. 3 Claims. (Cl. 46—41.)

1. In a game of the class described the combination of a series of substantially U shaped strips having a

main pocket formed at their base, the arms of the strips being turned upon themselves at their free ends, whereby to form auxiliary pockets adjacent the ends of the arms, the strips being disposed with their arms in substantial parallelism one with the other, adjacent strips having their main pockets disposed at opposite ends of the device, and movable bodies adapted to be lodged in the pockets.

- 1,461,219. MACHINE FOR GENERATING AND CUTTING THREADS AND THE LIKE. EDWARD W. MILLER, Springfield, Vt., assignor to The Fellows Gear Shaper Company, Springfield, Vt., a Corporation of Vermont. Filed Nov. 15, 1921. Serial No. 515,291. 16 Claims. (Cl. 90—4.)

1. A thread generating machine comprising a cutter holder, a cutter rotatably mounted upon said holder and having a dentate cutting edge similar in outline to a gear wheel, means for supporting a substantially cylindrical work piece and rotating said work piece about its geometric axis, means for effecting relative displacement between the cutter holder and work piece in the direction of the axis of the latter, and means for rotating the cutter consisting of a worm wheel rigidly connected with the cutter but of different pitch diameters and a rotatable worm in mesh with said worm wheel, the worm being at the same time displaced endwise relatively to the cutter holder at such a rate that the cutter is caused both to rotate in the manner of a worm wheel in mesh with a worm corresponding to the work piece and to roll relatively to the work piece in the manner of a gear wheel rolling in mesh with a rack.

- 1,461,220. SUBMARINE SIGNALING. CHARLES R. MOORE, Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 28, 1919. Serial No. 313,730. 5 Claims. (Cl. 177—386.)

1. In apparatus for the detection of under-water vibrations, a hollow casing adapted to be submerged, said cas-

ing being provided with an opening, placing the interior of the casing into direct communication with the surrounding water, means within said casing including a diaphragm responsive to vibrations to vary the electrical characteristics of a circuit, means communicating between the interior of said casing and the inner side of the diaphragm to permit compensating for the hydrostatic pressure acting on the diaphragm, and additional means for preventing water from reaching the current-varying means.

1,461,221. TELEPHONE-EXCHANGE SYSTEM. LOUIS A. MORTIMER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 19, 1920. Serial No. 425,078. 10 Claims. (Cl. 179—44.)

9. In a telephone exchange system, a subscriber's line, a trunk line, means for establishing a connection therebetween, a ringing circuit closed by the establishment of said connection, a relay in the trunk line actuated in response to the closure of said circuit, a second relay, a signal actuated in response to the operation of said first mentioned relay, and means controlled jointly by said first mentioned and said second relay for rendering said ringing circuit ineffective.

1,461,222. MACHINE FOR DELIVERING CORES TO MOLDS. HUBERT A. MYERS, Toledo, Ohio, assignor to The Hubert A. Myers Company, Toledo, Ohio, a Corporation of Ohio. Filed July 9, 1920. Serial No. 394,918. 19 Claims. (Cl. 198—25.)

1. In a machine of the class described, a revoluble member, a suction head carried by the member for revoluble movements therewith and different movements relative thereto, and mechanism automatically operable to create a suction in the head at one point in its revolution to pick up an article at such point and to release the suction at a different predetermined point in a revolution of the head to release an article carried thereby, and also to impart predetermined movements to the head relative to the member.

19. In a machine of the class described, an article conveyer having linear movements, a revoluble member

adapted to pass over the conveyer during a portion of its revoluble movement, an article picking up head carried by the member, separate means automatically operable to impart vertical, radial and horizontal rocking movements to the head to maintain it in article picking up register with the conveyer during a predetermined portion of a revolution of the head, and means for creating a suction in the head at one point in its revolution and releasing it at another point in its revolution.

1,461,223. HUB-BEARING CONSTRUCTION. FRANK A. NAUTS, Toledo, Ohio, assignor to The Gendron Wheel Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 6, 1922. Serial No. 541,627. 1 Claim. (Cl. 301—3.)

The combination with an axle, of a skein embracing said axle, a hub having a barrel surrounding said skein, anti-friction members between said skein and said barrel, a washer surrounding said skein at the outer end thereof and abutting against one end of said barrel, knobs upon said skein retaining said washer in position, the inner end of said skein being reduced in diameter to provide a shoulder, a washer surrounding the reduced portion of said skein and abutting against said shoulder as well as the other end of said barrel, the reduced portion of said skein being upset to retain the last-mentioned washer in abutment with said shoulder, and means for restraining said skein against rotation and longitudinal movement upon said axle.

1,461,224. DRYING APPARATUS. JOHN W. PEARSON, San Francisco, Calif. Filed Dec. 13, 1919. Serial No. 344,689. 13 Claims. (Cl. 34—26.)

1. A drying apparatus comprising an elongated chamber in which the product to be dried is placed, means for producing a mixture of air and products of complete combustion, means for blowing the mixture into the chamber at one end and a gate at the other end of the chamber arranged to deflect the stream of mixture upwardly and a conduit medially connected to the other end of the chamber arranged to receive said deflected stream.

1,461,225. COUPLING HEAD. WILLIAM L. READ, Chicago, Ill., assignor of one-half to Charles F. Read, Chicago, Ill. Filed Apr. 16, 1921. Serial No. 461,835. 8 Claims. (Cl. 285—63.)

1. A coupling head, comprising a body having a port extending therethrough, and a substantially flat ring of non-corrodible material surrounding said port, the inner diameter of said ring being substantially flush with the walls of said port and the perimeter of said ring being entirely surrounded by and anchored in the metal of said body.

1,461,226. CLOTHES WRINGER. CHARLES E. REDDIG, Richmond Hill, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 14, 1920. Serial No. 410,114. 3 Claims. (Cl. 68—32.)

1. In a clothes wringer, the combination of a supporting frame having end members, a roller journaled in said end members, a second roller, bearings for the second roller slidably mounted in said end members, yokes pivotally mounted on the tops of said end members and extending over the bearings for the second roller, tension devices cooperating with said yokes and tending to hold them in a certain position and knock down connections between said yokes and said movable bearings for the second roller which in one position require the movable bearings and yokes to move in unison and in another position leave said bearings free to move independently of said yokes.

1,461,227. VACUUM-TUBE MANUFACTURE. PAUL SCHWERIN, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 6, 1919. Serial No. 328,820. 5 Claims. (Cl. 49—7.)

5. A machine for shaping the end of a glass rod comprising a rotatable shaft, a protecting tubular member carried by said shaft and surrounding the major portion of said glass rod for shielding said major portion from

the direct application of heat, means located entirely within said tubular member for holding said rod in a

position to allow only a small portion of said rod to project beyond said tubular member, and means for heating the end of said rod beyond said tubular member.

1,461,228. METHOD AND APPARATUS FOR COATING MATERIAL. PAUL SCHWERIN, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 17, 1919. Serial No. 331,334. 23 Claims. (Cl. 91—14.)

3. In combination, means for gripping and feeding filamentary material, a second means for gripping said material at regular intervals, and means for impressing a difference of electrical potential between said gripping means to fuse the material therebetween.

4. The method which comprises feeding forward a continuous filamentary material, coating said filamentary material while being heated by an electric current, and severing a portion of the coated material by fusion as said material is fed forward.

7. The method which comprises feeding forward a continuous piece of material, alternately coating and glowing said piece of material and severing portions of said piece of material by fusion as said material is fed forward.

21. A machine for feeding material which comprises an endless conveyor, a plurality of spaced material grippers attached to said conveyor, means cooperating with said grippers for causing the severing of said material into portions of equal length.

1,461,229. DISK WHEEL. GEORGE D. SLAYMAKER, Detroit, Mich., assignor to Slaymaker Electric Welding Company, a Corporation of Michigan. Filed Aug. 11, 1919. Serial No. 316,580. 2 Claims. (Cl. 301-63.)

11. In combination with a hub provided with a flange provided with bolt holes and which is substantially offset from the plane of the center of the tread, a disk wheel provided with a central portion having bolt holes, a plurality of threaded studs passing through the said bolt openings in the flange and in the disk of the wheel, a stud-carrying ring for non-rotatably holding the inner

ends of said studs, a spacer in the form of an annulus having bolt openings through which the said studs can pass and having an annular spacing and enclosing flange

adapted to act as the spacing element between the outside of the hub flange and the central portion of the disk, and nuts that can be run on the ends of the bolts to fasten the wheel, spacer and flange together.

1,461,230. SKEW HELICAL CROWN GEARING. EVERARD STUBBS and EDWIN R. FELLOWS, Springfield, Vt., assignors to The Fellows Gear Shaper Company, Springfield, Vt., a Corporation of Vermont. Filed July 1, 1922. Serial No. 572,300. 10 Claims. (Cl. 74—41.)

1. A gear couple consisting of a crown gear and a helical spur pinion, the axis of the pinion being transverse to the axis of the gear and between the latter axis and the tooth-bearing zone of the gear, and the helix angle of the pinion teeth being such that the active face of each tooth becomes approximately radial to the gear when such face passes through the middle of its arc action.

1,461,231. DAMPER CONTROL. LEWIS O. SUDDERBERG, Stratford, Iowa. Filed Apr. 17, 1922. Serial No. 553,355. 3 Claims. (Cl. 236—96.)

1. In combination with a damper pivoted within a heating pipe, a thermostatic control comprising a disk secured

upon the pivot of the damper and formed with a slot, a thermostatic element of dissimilar metals having one end mounted upon the pipe and having its other end carrying a pin engaged within said slot, said thermostatic element being pivoted with respect to the pipe whereby it may be swung to withdraw the pin from the slot.

1,461,232. FILAMENT SUPPORT. SIGURD THRONSEN, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 3, 1918. Serial No. 252,379. 4 Claims. (Cl. 250—27.)

1. An electric device comprising a filament, a rigid support therefor and means to tension said filament comprising a pair of resilient wires, each wire being provided with a return bend portion and having one of its ends connected with said filament.

1,461,233. NIGHT LAMP. EDGAR L. TRENTESSEAU, Boston, Mass. Filed Mar. 10, 1922. Serial No. 542,657. 2 Claims. (Cl. 67—72.)

1. In a lamp of the character specified, a tube having its upper end portion externally screw threaded, a wick within the tube, and a burner comprising a threaded tube mounted upon the threaded end of the wick tube and adjustable thereon for regulating the light or extinguishing the same.

1,461,234. SYSTEM FOR GENERATING AND DISTRIBUTING ELECTRIC CURRENTS. CHARLES H. TOWER, Cleveland, Ohio, assignor to The Teagle Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 3, 1919. Serial No. 287,108. 28 Claims. (Cl. 290—41.)

15. In a single unit direct low tension current and high tension ignition current generator, the combination of a unitary magnetic field structure having branched flux paths, separate generating windings in said paths respectively, one for low tension direct current and the other for high tension ignition current, a rotor common to said windings and having at one end a flux distributing section for distributing flux of the field first through and then outside of said high tension generating winding and an exciting winding disposed in said field structure to excite in common the magnetic circuits for both of said windings.

28. In an electrical system, the combination of stator and rotor structures comprising the fixed and moving parts, respectively, of two magnetic circuits, a high tension ignition current generating winding mounted on the stator in inductive relation to one of said magnetic circuits, a low tension commutated direct current generating winding mounted on the stator in inductive relation to the other magnetic circuit, means for exciting both of said magnetic circuits comprising an exciting winding common to both of said magnetic circuits and mounted on the rotor and connections between the low tension direct current generating winding and said exciting winding to supply direct current to the latter, the rotor being adapted in operation to distribute field flux through the high tension generating winding alternately in opposite directions and to induce electro-motive force in the low tension generating winding, and a circuit breaker operated synchronously with the movement of the rotor for opening and closing the circuit of the high tension generating winding.

1,461,235. DIVISION PLATE FOR EGG CASES. J CLARENCE VOORHORST, New York, N. Y. Filed Oct. 21, 1921. Serial No. 509,228. 24 Claims. (Cl. 217—26.)

1. A tray division plate for packing cases whose receiving face is a series of parallel receptor corrugations compressible in the case.

1,461,236. SHAFT HANGER. IRVING F. WEBB, Elizabeth, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed June 12, 1920. Serial No. 388,460. 5 Claims. (Cl. 64—14.)

1. In a device of the class described, a supporting means provided with a lug rigid therewith and having a recess, a support having a portion adapted to rest in said recess, means for clamping said support therein, means independent of the clamping means for adjusting the support in said supporting means, and a bearing secured to the support.

1,461,237. SAFETY WINDSHIELD. RALPH H. WEST, Bay City, Mich. Filed Mar. 19, 1921, Serial No. 453,562. Renewed May 24, 1923. 6 Claims. (Cl. 296—84.)

1. A safety wind-shield comprising a frame, an auxiliary frame pivotally connected thereto, frictional means for normally holding the said frame in closed position, and a ratcheting element for holding the said frame in raised position when swung outwardly by inertia.

1,461,238. OZONIZER. MENDAL W. WILLSON, Mount Carmel, Ill. Filed Mar. 3, 1922. Serial No. 540,848. 26 Claims. (Cl. 204—32.)

1. An ozonizer electrode having relatively sharp edges resulting in high concentration of electrical discharge at such edges.

1,461,239. CABINET CONSTRUCTION. WILLIAM H. FRIEDLINE, Meyersdale, Pa., assignor to Modernola Company, Johnstown, Pa., a Corporation of Pennsylvania. Filed Nov. 21, 1919. Serial No. 339,708. 29 Claims. (Cl. 144—309.)

1. The process of producing a wooden cabinet which includes the assembling of a plurality of staves into a cylinder, cutting an end portion from the cylinder transversely to the grain of the staves, and connecting said end portion with the remainder of the cylinder with the stave portions in matched relation whereby the longitudinal continuity of the grain is attained.

1,461,240. DREDGE. BERT O. GODFREY, Seattle, Wash. Filed Oct. 24, 1922. Serial No. 596,547. 8 Claims. (Cl. 87—61.)

1. In combination, a force pump and two conduits open at their lower ends, one of said conduits being connected to the pump, and terminating at its lower end in

annular suction jet directed upwardly within the lower end of the second conduit, and means whereby water

from said pump may be directed upwardly through said jet and the second conduit, or downwardly through the lower end of the first conduit, at will.

1,461,241. MEANS FOR INSTRUCTION WITH RESPECT TO MUSICAL INSTRUMENTS. JAMES CLARKE HAGEY and THOMAS E. KAVANAUGH, Chicago, Ill., assignors, by mesne assignments, to The Q R S Music Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 13, 1919. Serial No. 317,159. 7 Claims. (Cl. 84—164.)

1. A device, for use in an automatic key-board musical instrument, provided with means for selectively causing the sounding of the notes of a selection, and provided also with means for indicating to a pupil the keys which should be struck in playing the selection manually, said last means including key-board depictions.

1,461,242. CLOSURE DEVICE. MICHAEL HORNSTEIN, Paterson, N. J. Filed Sept. 26, 1921. Serial No. 503,193. 3 Claims. (Cl. 16—147.)

2. The combination, with a closure device, having hinge parts on opposite sides thereof capable of mating with complementary hinge parts on a casing, removable pivot-bolts to engage the respective hinge parts, separate means for actuating the pivot-bolts, and handles at opposite sides of the closure device to operate said actuat-

ing means for the engagement and disengagement of said pivot-bolts, of normally separated opposed members extended from and operable respectively by the bolt actuating mechanism at each side of the closure member

whereby, when said mechanism at one side has been actuated, the member extended from such mechanism will engage the member extended from the mechanism at the other side of the closure member and thereby prevent its operation.

1,461,243. VAPORIZING DEVICE. FRANK HOWARD, Potter, Ky. Filed Mar. 9, 1920. Serial No. 364,497. 2 Claims. (Cl. 48—102.)

1. A vaporizer of the character described comprising a wick chamber, a float chamber arranged to one side of and communicating with the wick chamber, a float valve controlling said communication, spaced concentrically disposed heating chambers, a supply pipe communicating with both the said float chamber and the said heating chambers, a dome common to both of said heating chambers, and an outlet pipe leading from said dome.

1,461,244. SPRING OILER. EDWARD W. LEECH, JR., Baltimore, Md. Filed Mar. 29, 1922. Serial No. 547,619. 3 Claims. (Cl. 184—1.)

2. In a spring oiler, the combination with a leaf spring, a link bearing on the top of said spring, oiling members comprising means for oiling said spring each slidably connected at one end to said link, a locking bar slidably connected to the other ends of said members and a spring for pressing said link and members towards said leaf spring.

1,461,245. SPRING OILER. EDWARD W. LEECH, JR., Baltimore, Md. Filed Aug. 24, 1922. Serial No. 584,109. 10 Claims. (Cl. 184—1.)

1. In a spring oiler, the combination with a leaf spring, of an oiling member mounted on one side thereof and comprising a reservoir for oil and means for distributing said oil to said spring, projections on said member extending across the top and bottom of said spring, and a clamp having sliding engagement with one projection and pressing against the other side of said spring and cooperating with said projections to press said member against said first named side and to press said projections against the top and bottom of said spring.

1,461,246. FISHING TACKLE. ALFRED H. LENT, Capitola, Calif. Filed July 15, 1922. Serial No. 575,146. 2 Claims. (Cl. 43—40.)

2. A fastening link having a loop at one end thereof, the other end of said link having an enlarged loop formed therein, a locking arm extending from said enlarged loop, a sleeve surrounding said link, said sleeve being adapted to receive the locking arm, a pin through said sleeve, said pin being adapted to move in said loop, a hook on the end of the locking arm, and said sleeve having an aperture in the bottom thereof adapted to receive said hook, and an extension adapted to be connected to the fishing hook and said fastening link.

1,461,247. ORCHARD HEATER. GEORGE LINGENFELTER, Sandy, Oreg. Filed Dec. 17, 1920. Serial No. 431,385. 2 Claims. (Cl. 126—59.5.)

1. An orchard heating apparatus having a horizontal furnace provided at one end and near the top with an outlet, a blast pipe extending longitudinally through the furnace near the bottom thereof, arched plates spanning the enclosed portion of the blast pipe and having lateral distributing openings, and means for supplying a blast to said pipe.

1,461,248. REDUCING VALVE. JAMES W. MCCONNELL, Washington, D. C., assignor to Government of the United States. Filed May 23, 1918. Serial No. 236,241. 1 Claim. (Cl. 50—23.)

A pressure regulating apparatus comprising in combination a valve casing of air tight construction having high and low pressure chambers, a valve in said casing exposed to high and low pressure on its opposite sides, slidable means in said casing and connected to said valve,

a spring associated with said slidable means acting on said valve through said slidable means, a tubular convoluted diaphragm whose free end is hermetically connected to said slidable means, and the opposite end hermetically connected to said casing, said diaphragm providing the effect of a hermetic frictionless packing adapted to prevent leakage of fluid from the high pressure chamber in

said casing from around or between said slidable means into the part of the casing where said spring is confined, and a passage leading from that part of the casing external to the diaphragm to the low pressure chamber in said casing to carry off leakage and thus prevent loss of air or other fluid, the effective surface of said valve, slidable means and diaphragm being substantially equal.

1,461,249. ELEVATOR-DOOR HANGER. OSCAR P. MCGEE, Dallas, Tex. Filed June 11, 1921. Serial No. 476,793. 1 Claim. (Cl. 16—97.)

A hanger for suspending elevator doors, comprising a back or base plate, angle plates spaced apart longitudinally thereof and connected to the back plate; parallel grooved trackways spaced apart and suspended from the angle plates; a longitudinally projecting rail on the underside of said suspended trackways; hanger plates carrying doors and having plates vertically extending above the suspended trackways; a plurality of roller bearings spaced apart and disposed between said suspended trackways and said upper trackways and grooved rollers carried by the hangers and adapted to ride against said longitudinally projecting under rail.

1,461,250. BRACELET. PEARL B. MCKENZIE, Sedalia, Mo. Filed Oct. 31, 1921. Serial No. 511,722. 3 Claims. (Cl. 224—28.)

2. A bracelet attachment of the character described, comprising a member having a portion disposed within

the bracelet and a portion disposed exteriorly thereof and spaced therefrom, and means slidable within the bracelet

and cooperating with said member to hold the exterior portion thereof in gripping relation with the bracelet for the purpose specified.

1,461,251. AUTOMOBILE SIGNAL. PETER MCLAREN, Whittier, Calif. Filed May 23, 1921. Serial No. 471,773. 3 Claims. (Cl. 177—337.)

1. In a signaling device the combination of: a suitable number of electrically operated signals; levers adapted to actuate certain mechanisms; switch means associated with one of said levers to close an electric circuit including certain of said signals when said lever is partially advanced, said switch means to close a circuit including all of said signals when said lever is advanced sufficiently to actuate said mechanism associated therewith; and switch means associated with another of said levers to close a circuit including another of said signals when said secondly named lever is partially advanced, said secondly named switch means to close a circuit including all of said signals when said secondly named lever is advanced sufficiently to actuate said mechanism associated therewith.

1,461,252. BILL IRONER AND STERILIZER. EDWARD H. MOYLE, Los Angeles, Calif., assignor of one-half to Oscar M. Souden, Los Angeles, Calif. Filed Aug. 12, 1920. Serial No. 402,963. 8 Claims. (Cl. 92—71.)

1. In combination, a frame, two parallel pairs of parallel rolls revolvably mounted on the frame, the rolls of each pair being adjustable toward peripheral contact with each other along longitudinal lines of contact, the planes of the axes of each pair of rolls being transverse to the plane determined by the two said lines of contact, one roll of each pair, being rolls located on opposite sides of the last mentioned plane, being hollow, and heating means within the hollow rolls, the peripheral walls of the rolls being of heat conducting material and the heating means being close to the peripheral walls.

- 1,461,253. GARBAGE CAN. OBADIAH N. OWEN, Phoenix, Ariz. Filed June 26, 1922. Serial No. 570,893. 3 Claims. (Cl. 220-47.)

1. A receptacle having an open top, a cover for the top, a substantially U-shaped bracket comprising an upright guide bar and offset arms having their free terminals mounted on the receptacle, a carrier vertically slidable on the upright guide bar and extending inwardly therefrom, means for moving the carrier, and a spiral stem rotatably mounted on the inwardly extending portion of the carrier and having a slidable and rotatable bearing in the upper offset arm of the bracket, said stem having the cover affixed thereto.

- 1,461,254. RAILWAY BRAKE. ORLANDO ROYSTER, Spokane, Wash. Filed Oct. 18, 1921. Serial No. 508,522. 1 Claim. (Cl. 188-242.)

The combination with a brake-head having a pair of spaced intermediate lugs extending the full width thereof, of a brake shoe having a central lug and lugs spaced therefrom forming open end transverse grooves for the head-lugs and key openings in said lugs, transversely arranged bridge members of more durable metal embedded in the metal and closing the openings in certain of the lugs of the shoe, a locking key for the complementary lugs, and longitudinally extending reinforcing members embedded in the shoe.

- 1,461,255. CURTAIN AND SHADE POLE FIXTURE. CHARLES SCHMIDT, Clifton, N. J. Filed Sept. 11, 1922. Serial No. 587,273. 2 Claims. (Cl. 156-24.)

1. A shade hanger bracket comprising a plate having out turned flanges on its upper and lower edges, a slide operable between said flanges, said slide having a longitudinal slot closed at each end the outer end of said slide being bevelled outwardly to accommodate the slot, a bolt fixed centrally in said base plate passing through the slot, a thumb nut engaging said bolt on the outer

side of said slide, an angular bracket fixed on the inner end of said slide, said bracket being adapted to engage a shade roller pintle, an open looped support secured

to said bracket to receive one end of a curtain pole, and an integral spring arm formed on said slide to make resilient contact with one of said out-turned flanges.

- 1,461,256. CLUTCH-OPERATING DEVICE. ARTHUR B. THOMPSON, Seattle, Wash. Filed Nov. 22, 1919. Serial No. 340,042. 9 Claims. (Cl. 188-97.)

1. The combination with a clutch operating means, of a dashpot adapted to be connected with a transmission member of the said means, and means for disconnecting the dashpot at a definite point in the travel of the clutch members.

- 1,461,257. TOY GUN. ARTHUR B. THOMPSON, Missoula, Mont. Filed Feb. 7, 1923. Serial No. 617,562. 2 Claims. (Cl. 124-14.)

1. In a toy gun, in combination, a frame and a barrel movable therein, said barrel having a hook opening forwardly at its muzzle end for holding an end of a rubber band, and having a catch at its breech end for engaging the opposite end of the rubber band, and said frame having a band-releasing surface cooperable with said catch to hold this end of the rubber band, and means for moving said barrel at will to withdraw said catch to permit release of the band.

1,461,258. RAIL ANCHOR. ROLANDIS A. BLAIR, Fort Wayne, Ind., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 8, 1920. Serial No. 408,799. 39 Claims. (Cl. 238—330.)

34. A rail anchor provided at one end with means for engaging the rail base at one side thereof and at the other with jaws for engaging the other side of the rail base at two points, said jaws being adapted to be forced apart by straining the anchor to produce a grip of the anchor on the rail.

1,461,259. RAIL ANCHOR. ROLANDIS A. BLAIR, Fort Wayne, Ind., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Original application filed Sept. 8, 1920, Serial No. 408,799. Divided and this application filed Mar. 17, 1922. Serial No. 544,493. 24 Claims. (Cl. 238—330.)

23. A resilient rail anchor comprising bars to extend under the base of a rail from edge to edge thereof, and members intervening between said bars at opposite ends of the anchor, said anchor provided at opposite ends with pairs of rail engaging jaws normally a shorter distance apart than the width of the rail and the anchor being formed so as to be capable of elongation in application to the rail.

1,461,260. RAIL ANCHOR. ROLANDIS A. BLAIR, Fort Wayne, Ind., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Filed June 5, 1922. Serial No. 565,821. 25 Claims. (Cl. 238—330.)

20. A rail anchor formed from a bar bent upon itself to provide two legs, one of which is formed to engage one edge of a rail base and the other formed to provide a spring member adapted to bear against the under surface of said rail base.

1,461,261. RAIL ANCHOR. ROLANDIS A. BLAIR, Fort Wayne, Ind., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Filed June 5, 1922. Serial No. 565,822. 17 Claims. (Cl. 238—330.)

1. A one-piece rail anchor formed with means for engaging opposite edges of the base of a rail, and with a portion adapted to bear against a cross-tie; said tie-abutting portion being bent to provide a spring, the extremity of which bears against the under surface of the rail base.

1,461,262. AUTOMATIC FLUID CONTROL. JULIUS BROMBACHER, Los Angeles, Calif. Filed Mar. 30, 1922. Serial No. 547,974. 5 Claims. (Cl. 67—116.)

1. A fluid control comprising a housing having an inlet and an outlet, a valve within said chamber having a stem, a plurality of plates within said housing, said valve stem extending through said plates, a heating chamber on said housing thermally to influence said plates to cause same to lift and hold said valve lifted, and a pilot light tube to heat said heating chamber.

1,461,263. SOAP-DISH ATTACHMENT FOR LAUNDRY TRAYS. EMIL R. BUHTZ, Seattle, Wash. Filed Sept. 19, 1921. Serial No. 501,539. 4 Claims. (Cl. 68—31.)

1. A soap holder for molded laundry trays comprising a metal dish having exteriorly projecting anchoring lugs positioned in a centrally disposed transverse band and adapted to be anchored in a wall of the tub during the molding thereof.

1,461,264. NUT GRADER. WILLIAM P. BULLARD, Albany, Ga. Filed Feb. 27, 1922. Serial No. 539,530. 5 Claims. (Cl. 146—3.)

1. In nut feeding means, a hopper having a side wall with openings therein and an opposite movable wall, means moving adjacent said openings and carrying nuts therefrom to points outside the hopper, and means for simultaneously operating said nut-carrying means and the movable wall.

1,461,265. NUT GRADER. WILLIAM P. BULLARD, Albany, Ga. Filed May 2, 1923. Serial No. 636,225. 3 Claims. (Cl. 130—32.)

1. In nut feeding means, a hopper having a wall member with openings therein, and a rotary member having nut-carrying projecting fingers that pass through the openings, said wall and finger members having projections and recesses through which the projections pass during the rotation of the member.

1,461,266. SLITTING MEANS. JAMES A. CAMERON and GUSTAF BIRGER BIRCH, Brooklyn, N. Y., assignors to Cameron Machine Company, Brooklyn, N. Y., a Corporation of New York. Filed June 9, 1920, Serial No. 387,620. Renewed Dec. 9, 1922. Serial No. 490,727. 12 Claims. (Cl. 164—65.)

1. Slitting means comprising a plurality of sets of rotatable overlapping shearing members arranged in two opposed groups, the members of each set engaging

laterally with each other, means for positively driving both members of each set, means for moving the members of one group laterally and in unison with respect to the other group, and means for moving the members of the same group edgewise and in unison to separate the members of opposed groups.

1,461,267. VALVE GRINDER. JOHN M. COBURN and JOHN M. MCCRARY, Long Beach, Calif. Filed Nov. 14, 1921. Serial No. 515,061. 2 Claims. (Cl. 51—29.)

1. In a valve grinder, the combination; of a housing formed with a longitudinal bore, a spindle adjustably carried by the housing within said bore; said spindle being provided with a bifurcated extremity, a rotatable valve engaging shoe carried by the spindle in the bifurcations; and means for giving said spindle rotary reciprocation; said means including a spring adapted to rotate the spindle in one direction, and a strap adapted to be coiled about the spindle to rotate the spindle in the opposite direction; there being a Scotch yoke to which the strap is connected at one end, and means for guiding and reciprocating said yoke.

1,461,268. AUTOMATIC CONTROLLER FOR MOTORS. JAMES CORYDON DE LANEY and FRANK L. DE LANEY, Porterville, Calif. Filed Mar. 14, 1921. Serial No. 452,112. 1 Claim. (Cl. 200—83.)

A circuit controlling device comprising a casing formed with a hollow body provided with an annular flange near the base of its inner wall, a flanged cover provided with a skirt for threaded reception within the body and for co-operation at its lower end with said annular flange, a flexible diaphragm disposed transversely of the body and supported by said flange for dividing the body into two chambers, a pair of inwardly pressed spring held contact points carried by said cover above said diaphragm, a post extended upwardly from the center of said diaphragm, said cover provided with a guide opening within which the end of said post reciprocates, a support extended laterally on each side of said post, a contact ring carried by said support, a connection between the lower chamber and a source of fluid supply under pressure, and a packing ring in contact with opposing faces of the disk at its periphery to afford the maximum flexibility thereto for its operation.

1,461,269. DISCHARGE SPOUT FOR LIQUID CONTAINERS. SIGMUND FREY, Los Angeles, Calif. Filed Sept. 19, 1921. Serial No. 501,713. 12 Claims. (Cl. 221-27.)

5. The combination with a liquid container, of a bushing in the wall of the container, a tube slidable in the bushing and having a port, a sleeve surrounding the tube, a valve to close one end of the tube, means yieldingly holding the sleeve in position to close the port and yieldingly holding the valve in closed position, and means connected with the sleeve and engaging the valve to open it when the sleeve is moved toward the valve.

1,461,270. TOOL. FRANK GARRISON, Jerome, Idaho. Filed Apr. 5, 1922. Serial No. 549,925. 4 Claims. (Cl. 294-43.)

1. A tool having jaws and pivotally connected handle members carrying said jaws, each handle being made up of a pair of pivotally connected sections, one of the sections having a concaved face against which the other section is adapted to be snugly fitted in the folded position.

1,461,271. MACHINE FOR THE MANUFACTURE OF GLASS ARTICLES. ROBERT FREDERICK HALL, Moseley, near Birmingham, England. Filed July 27, 1920. Serial No. 399,433. 10 Claims. (Cl. 49-41.)

1. A finishing mold mechanism for machines for forming glass articles comprising a supporting member, a swinging mold carrying frame pivotally supported between its ends on the supporting member, a finishing

mold on the swinging frame member at one side of the pivot, and means connected to the frame member at the other side of the pivot for swinging the frame member.

1,461,272. MACERATION DISTRIBUTOR FOR SUGAR-CANE MILLS. WILLIAM GARVIE HALL, Honolulu, Territory of Hawaii. Filed Feb. 13, 1923. Serial No. 618,814. 4 Claims. (Cl. 100-47.)

1. A maceration distributor for sugar cane mills, comprising a rotary cylinder having on its surface a series of longitudinal troughs, and means for supplying the maceration material to said troughs.

1,461,273. REPAIR DEVICE FOR AUTOMOBILE SPRINGS. PETER THEODORE JASMIN, Helena, Mont., assignor of one-half to Philip Henry Huber, Helena, Mont. Filed Aug. 7, 1922. Serial No. 580,208. 1 Claim. (Cl. 267-51.)

A repair device for vehicle leaf springs comprising a flat clamping plate to span the break and to contact the upper face of the master-leaf from one of its ends to the other, said plate being provided on its longitudinal edges intermediate its ends with opposed depending integral arms having screw-threaded portions, said arms being adapted to extend crosswise of the longitudinal edges of the spring leaves, a cross-plate to extend transversely across the lowermost leaf, said last named plate being formed at its opposite ends with holes through which said arms extend, nuts on the threaded portions of said arms, said first named plate being provided at its end with screw-threaded openings, and retainer screws threaded through the openings, the inner ends of said screws being pointed to securely grip the master-leaf to prevent slippage of the device thereon.

1,461,274. AUTOMOBILE SPRING. FRANK G. KRANKAN, Pittsburgh, Pa. Filed June 15, 1921. Serial No. 477,617. 7 Claims. (Cl. 267-20.)

1. A vehicle spring comprising guide rods fixed at their ends to a vehicle frame, springs extending longitudinally

with relation to the guide rods, and a link mechanism slidable on said guide rods between adjacent ends of the springs, said link mechanism intervening between the frame and the axle of the vehicle.

- 1,461,275. VALVE-SPRING-LIFTER LOCK. HARRY W. KULP and MARTIN C. DELLINGER, Lancaster, Pa. Filed Mar. 9, 1921. Serial No. 450,902. 13 Claims. (Cl. 29—86.3.)

1. In combination in a valve spring lifter, a pair of movably mounted handles, a bar movably mounted in one of said handles and at all times lying entirely between said handles, and a locking plate extending through the other handle and operatively engaging said bar.

- 1,461,276. APPARATUS FOR THE ELECTROLYTIC PRODUCTION OF METALLIC ALLOYS IN THE FORM OF PASTE OR SLUDGE. BENJAMIN LEECH, Macclesfield, England, assignor of one-half to Henry & Leigh Slater, Limited, Manchester, England. Filed Mar. 16, 1920. Serial No. 366,327. 8 Claims. (Cl. 204—5.)

1. In an apparatus for the electrolytic preparation of metal or alloys in the form of paste or sludge, a vat containing electrolyte, and anodes located in said vat and formed partly of an active material and partly of a material which resists or withstands the conditions of electro-chemical action and does not disintegrate or pass into solution, said active material and the resistant material being immersed in and contacting with said electrolyte.

- 1,461,277. SASH RAISING AND LOWERING DEVICE. NICHOLAS C. LEIDGEN, Detroit, Mich. Filed Aug. 10, 1922. Serial No. 580,894. 8 Claims. (Cl. 268—4.)

1. Means for raising and lowering a sash comprising a support, a rotary shaft carried by said support and

adapted to have rotation normally imparted thereto, a reciprocable member on said shaft, a stationary nut carried by said support and engaging said reciprocable member to cause it to reciprocate during rotation of said shaft, and a traveler nut engaging said reciprocable member and adapted to raise or lower the sash, said traveler nut being guided adjacent said support.

- 1,461,278. TURBINE-DRIVEN LOCOMOTIVE. FREDRIK LJUNGSTRÖM, Lidingö-Brevik, Sweden, assignor to Aktiebolaget Ljungström Angturbin, a Corporation, Stockholm, Sweden. Filed May 2, 1922. Serial No. 557,861. 5 Claims. (Cl. 105—38.)

1. In a turbine driven locomotive including two carriages, wheels supporting said carriages and a coupling, an arrangement characterized by at least one pair of the fore wheels of the rear carriage being brought together as driving wheels in a bogie connected by means of a coupling with the carriage running before it which thus serves as guiding carriage for the bogie of the rear carriage.

- 1,461,279. LOCK. ELLIS E. LONGFELLOW, El Reno, Okla.; Margaret R. Longfellow executrix of said Ellis E. Longfellow, deceased. Filed Nov. 8, 1920, Serial No. 422,550. Renewed Dec. 1, 1922. 1 Claim. (Cl. 70—29.)

A door lock including a casing having a face plate provided with a central bolt opening, a bolt arranged therein, a plate secured to the inner face of the bolt and disposed in the casing, rods connected with the plate, a second plate connected to the ends of the rods, notched lugs in the casing receiving the rods, springs on the rods contacting with the lugs on the front plate, a spindle sleeve in the casing having lugs thereon in engagement with the rear plate, a key barrel having right angular key ways therethrough and having spaced annular flanges providing ways and openings between the ways, a lug projecting from the outer face of the barrel, a substantially U-shaped guide removably secured in the casing having its parallel members provided with arcuate

depressions which are received in the ways, a spring influenced pin passing through the guides and designed to enter one of the apertures of the barrel and to be retracted when the key is inserted in the key way of the barrel to permit of the turning of the barrel to bring the lug thereof in the path of contact with the front plate of the bolt, and the said spring influenced pin designed to enter another aperture in the barrel when said barrel is in such position.

1,461,280. OVEN. CLEAVIE MCBRIDE, Los Angeles, Calif. Filed Jan. 23, 1922. Serial No. 531,184. 2 Claims. (Cl. 126—275.)

1. An oven, including an outer and an inner casing held in spaced relation from each other, and a door member carrying a spaced plate member adapted to close the outer and the inner casings, said door member and plate forming a heat circulating space therebetween; the bottom wall of said outer casing being formed with an opening therein and there being an annular member extending through said opening; said annular member being adapted to be placed over a burner of a stove to confine the flame therein; there being a baffle plate member carried by the bottom wall of the inner casing and extending partly within the annular member, and there also being a flue member carried by the top wall of the outer casing for conducting the gases of combustion from the space between the outer and the inner casings; said flue member comprising a U-shaped member closed at one end, and the top member of the outer casing being provided with an opening in communication with said flue member.

1,461,281. MECHANICAL THREAD PASTING APPARATUS. FRANTZ ADOLF MARTENS, Copenhagen, Denmark, assignor to Martens' Patent "Twisting-In" Machine Co. Ltd., Copenhagen, Denmark, a Corporation of Denmark. Filed Sept. 18, 1920. Serial No. 411,280. 7 Claims. (Cl. 28—47.)

1. In a warp uniting machine having means for supporting two warps stretched mutually crosswise in the machine; a disc adapted to reciprocate parallel to the warps; a pasting device comprising means for supplying an adhesive to the thread of the warps; a heating member; and an air supplying device for blowing air upon the adhesive on the threads resting on the heating member.

1,461,282. SADDLE. CLAUDE BROOKINS MILLS, High River, Alberta, Canada. Filed July 15, 1922. Serial No. 575,253. 1 Claim. (Cl. 54—44.)

The combination with a saddle having a tree of a stirrup leather frame comprising transverse bars adj-justably mounted on the tree, and longitudinal bars converging toward their forward ends rigidly mounted on said transverse bars, substantially as described.

1,461,283. CORN SHELLER. ROBERT M. MITCHELL, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Mar. 3, 1919. Serial No. 280,432. 11 Claims. (Cl. 130—6.)

1. Shelling mechanism for corn shellers comprising in combination, a cylinder, a shelling cage enclosing said cylinder and including a plurality of adjustable staves, stave sectors engaging said staves, and cam mechanism engaging said stave sectors.

1,461,284. DEVICE FOR FLUSHING TOILET FIXTURES. DUDLEY NEWTON, San Francisco, Calif., assignor of one-half to William A. Goericke. Filed June 14, 1921. Serial No. 477,437. 5 Claims. (Cl. 4—12.)

1. The combination with a flushing tank, of an air container therein having its top closed and its bottom open and in communication with said tank, a discharge pipe having its intake end within and spaced upwardly

from the open end of said container, a trap to which said pipe leads, a bowl, a flushing pipe leading from the trap to the bowl, said bowl having a discharge opening, a chamber the upper end of which is open and in registration with the opening, a drain passage in said bowl in communication with said opening, a cover mounted in said chamber and having its upper end closed and its lower end in communication with said chamber, a conduit leading from a point within the cover to said drain passage and a pipe in communication with said air container arranged to discharge into the cover above the lower end thereof and formed as a trap intermediate of its ends.

- 1,461,285. QUICK-DETACHABLE SEARCHLIGHT MOUNTING. JOHN K. OLSEN, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed June 21, 1922. Serial No. 569,812. 10 Claims. (Cl. 240—7.)

1. In combination with a lamp body and a supporting bracket therefor, a stud associated with the lamp body and a captive nut carried rotatively on the bracket, together with a spacer sleeve rotatively mounted in said bracket in axial alignment with the bore of the nut, said nut being threaded to fit the stud, and the sleeve being formed to fit said stud whereby the sleeve may be fixedly associated with the lamp body while rotatively engaged in the bracket when the parts are assembled.

- 1,461,286. TRANSMISSION BAND. ANTHONY P. PFEFFER, Detroit, Mich. Filed June 10, 1922. Serial No. 567,237. 6 Claims. (Cl. 188—249.)

4. A transmission band comprising intermediate and end sections, adjacent ends of the intermediate sections and the ends thereof coacting with the adjacent ends of

the end sections having the end portions thereof bent back to provide pivot receiving loops, said sections being provided adjacent such loops with offsets forming shoulders, and sockets formed upon the end portions receiving said shoulders.

- 1,461,287. HIGH-TENSION CONDENSER. EMIL PEIFFNER, Frybourg, Switzerland. Filed Jan. 10, 1922. Serial No. 528,132. 3 Claims. (Cl. 250—41.)

1. A high tension condenser consisting of a plurality of partial condensers connected in series to form a chain insulator, each partial condenser consisting of a hollow tubular supporting insulator, conducting mounts carried by the ends of the insulator and constituting closures therefor, and metal coatings and insulating layers arranged in and completely enclosed by the tubular insulator and conducting mounts.

- 1,461,288. ANIMAL TRAP. JOHN W. PRIMROSE, Clarksdale, Miss. Filed June 29, 1921. Serial No. 481,268. 5 Claims. (Cl. 43—76.)

1. In an animal trap, a cage comprising a frame having a reticulated covering, a metallic bottom and a non-metallic flooring, said cage being provided with an entrance opening in one side and extending partly across the same, a door closure for the back of the cage, means for holding said door in a closed position, a covered runway dividing the cage to one side of the door opening, a trap door controlling the exit thereof, said runway dividing the cage into an entrance compartment and a retaining compartment, a trigger for holding the door open, and a tripping device cooperating with the trigger to disengage the latter whereby the door will close, said trigger comprising a pivoted runway connected to the door, a portion connected to the trip and having a lug engaging the pivoted portion to hold the same in position with the door open and adapted to release the same to permit the door to close, said runway having spaced walls, one of said walls covering the vertical area of the cage, a partition forming a part of said runway, and having an opening therein leading from the entrance compartment to the retaining compartment, and a door member having a covering portion co-operating with said opening.

1,461,289. EYESHIELD ATTACHMENT FOR MOTOR VEHICLES. JOHN WILLIAM PRIMROSE, Clarksdale, Miss. Filed Oct. 21, 1922. Serial No. 595,955. 8 Claims. (Cl. 296—97.)

1. In combination with a motor vehicle having a top, a rod supported by said top longitudinally thereof, and means depending from said rod adapted to support a windshield forward of the driver's seat of the motor vehicle.

1,461,290. HOSE CLAMP. LUCIEN MARCEL QUÉMARD, Royan, France. Filed Apr. 21, 1921. Serial No. 463,289. 2 Claims. (Cl. 24—19.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

2. In a collar for crimping rubber hose on metal pipes, a base plate bent to lie against the circumference of the rubber hose, an arched loop on said base plate, a band, a fold on the one end of the band to attach the same to the said base plate, a passage in the said loop for the other end of the band, a split pin to tighten the band on the base plate, and a screw in the loop for locking the band against the base plate after tightening.

1,461,291. SILO LADDER. FRANCIS M. REINHART, Rudolph, Wis. Filed Aug. 2, 1922. Serial No. 579,153. 1 Claim. (Cl. 20—1.4.)

A ladder section of the class described comprising two substantially triangular supporting members each formed of heavy strap metal with an outturned support engaging hook at one corner, and the adjacent members at another corner arranged parallel and spaced laterally to form sockets with a cross rod having flattened ends fitting and rigidly secured in said sockets.

1,461,292. LIQUID MEASURING AND DISPENSING APPARATUS. EDWARD A. RIX, San Francisco, Calif. Filed July 28, 1920. Serial No. 399,499. 11 Claims. (Cl. 221—100.)

1. In an apparatus of the character described a container having a measuring chamber formed therein, means for delivering liquid thereto, a series of pipes, each terminating at a different level within the chamber, and means for bringing any pipe into communication with the liquid delivering means.

1,461,293. TRANSMISSION DRIVE FOR SPEEDOMETERS. WILLIAM H. SCHULZE, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Aug. 14, 1922. Serial No. 581,690. 6 Claims. (Cl. 74—7.)

1. In combination with a transmission casing and a power shaft therein having a gear for delivery of power from said shaft, the casing having an apertured boss through which a tangent to the pitch line of said gear may extend parallel to the circumscribing wall of the aperture, a tubular member exteriorly diametred over part of its length to fit said aperture, and flanged at the outer limit of said part for seating of said flange against the wall of the casing at the outer end of the boss, and having at each end a shaft bearing, the bearing at the inner end being spaced longitudinally from the remainder of the tubular member; a shaft journaled in both said bearings extending across said space and a gear on said shaft located in said space, whereby the gear stops the shaft longitudinally in said tubular member.

1,461,294. BURGLAR ALARM. ALFRED B. SIMPSON, North Vernon, Ind. Filed Feb. 4, 1922. Serial No. 534,159. 1 Claim. (Cl. 200—54.)

In combination with a hinged closure, a signaling device comprising a hinged member including staples, a pin

extending through the staples, said hinge member including spring arms having portions thereof coiled around the pin of said spring arms having a portion thereof contacting with the member on which the hinge is mounted,

a head having connection with the outer ends of the spring arms, contact members in the head, said hinged closure adapted to engage the head to complete the circuit to the alarm.

1,461,295. SPRING-REPAIRING DEVICE. JESSE E. STEVENS, Lebanon, Ind. Filed Oct. 18, 1922. Serial No. 595,356. 3 Claims. (Cl. 267—51.)

3. In a spring repairing device, plates having interlock engagement with each other, the said plates having recesses in their edges near their outer ends, clamps fitted against the edges of the plates, means extending through the clamps and seated in the recesses for holding the clamps in operative relation to the plates, means for drawing the clamps against the edge of a spring, means for holding the plates in assembled relation to the spring, and filling blocks on the upper surface of plates.

1,461,296. ROTARY VALVE. SAMUEL JAMES TRITT, Jr., Carlisle, Pa. Filed Sept. 26, 1921. Serial No. 503,283. 2 Claims. (Cl. 123—190.)

1. In combination with the cylinder head of an internal combustion engine provided with the tapered valve seat, a valve snugly fitting therein, said valve being provided with a recess in the end thereof and with ports communicating with the recess, the head having inlet and exhaust ports with which the ports of the valve are adapted to register, the end of the valve provided with

the recess having an annular flange overlying the head, said flange having an inwardly directed oil ring, the adjacent face of the head having an annular groove in which said flange extends, said valve seat adjacent to its inner end being provided with an oil groove therearound, the cylinder head being provided with an oil port communicating with the lower portion of the groove, said head being provided with an oil port leading from the groove in the head to the valve seat inwardly of the valve, said valve seat being also provided with a groove connecting the last named oil port and the first named oil groove in the valve seat.

1,461,297. HORSESHOEING DEVICE. JAMES P. TURNER, Faulkton, S. Dak. Filed May 23, 1921. Serial No. 471,649. 3 Claims. (Cl. 119—101.)

1. A device for lifting the leg of an animal comprising a tail engaging clamp, a leg engaging clamp, means connecting the clamps and manually operable to raise the animal's leg from the ground, and a releasable locking means on the leg clamp for automatically engaging and holding the raising means and operable from a distance from the animal for the safety of the operator.

1,461,298. CINEMATOGRAPHIC APPARATUS FOR THE PERFORMANCE OF MUSICAL FILMS. CIPRIANO VISCHÉ, Genoa, Italy. Filed Apr. 4, 1921. Serial No. 458,597. 5 Claims. (Cl. 88—16.2.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. Improvements in cinematographic apparatus adapted to obtain in the taking of moving pictures, the synchronous contemporaneous registration with the pictures on the film, of the time of the music accompanying the taking of the pictures, including in combination, a picture taking apparatus including a film, a puncture device in

said apparatus and associated with the film, an electro-magnet associated with the puncture device, and an electric key including a switch adapted to be mounted on the music stand of the band master and arranged in circuit with the armature so that the band master during the taking of the moving pictures, by continually beating the time of the music on the key effects the closure of the circuit in the switch, which action, through the electro-magnet operates the puncture device in the picture taking apparatus so that at every time beating there corresponds a hole in the running negative film.

1,461,299. METHOD OF SHAPING PYROXYLIN, CELLULOID, AND LIKE MATERIALS. CHARLES E. WEHN, Alameda, Calif., assignor to Listo Pencil Corporation, Alameda, Calif., a Corporation of California. Filed Mar. 4, 1922. Serial No. 541,069. 5 Claims. (Cl. 18—51.)

1. A method of changing the interior diameter of pyroxylin tubes, which consists in submerging a mandrel shaped die in a body of hot water and then forcing the pyroxylin tube over said mandrel while the mandrel is maintained in a submerged condition in the heated water to progressively heat and soften the tube and simultaneously change the shape of the same.

1,461,300. SPARK PLUG. GEORGE WINCHESTER, Roselle, and FRANK A. HOWARD, Elizabeth, N. J., assignors to Standard Development Company, a Corporation of Delaware. Filed May 16, 1921. Serial No. 469,957. 2 Claims. (Cl. 123—169.)

1. In combination, an internal combustion engine, a spark plug secured thereto, an electrode forming part of said spark plug and projecting into the combustion chamber of the engine substantially through the clearance volume thereof and a plurality of spaced spark points secured to said electrode, said points approaching to a short distance from a wall of the combustion chamber to form spark gaps acting in parallel between the said points and the wall.

1,461,301. PROCESS OF PRODUCING REFLECTORS. MAX WISKOTT, Breslau, Germany. Filed Aug. 30, 1921. Serial No. 497,042. 4 Claims. (Cl. 18—47.5.)

1. The process of producing a curved reflector of any desired shape which consists in using a form of comple-

mentary shape and molding the reflector thereon of plastic or moldable substance, then removing the reflector

when it has sufficiently set or hardened and then coating the surface of the reflector with a metallic reflecting material.

1,461,302. CLAMP FOR CULTIVATOR TOOLS. WILLIAM L. BEALL, Chattanooga, Tenn., assignor to International Harvester Company, a Corporation of New Jersey. Filed Feb. 18, 1920. Serial No. 359,088. 3 Claims. (Cl. 55—94.)

1. The combination with a notched shank of a cultivator tool, of a U-shaped clamp of the class described, said clamp having arms of non-uniform cross section whereby reduced portions thereof may engage notches in said shank, a supporting bar for said shank and clamp, and wedging means for drawing the clamp arms into notches in the shank and binding the shank against the supporting bar.

1,461,303. POULTRY NEST. JOSEPH L. BOISVERT, Bourbonnais, Ill. Filed Jan. 8, 1923. Serial No. 611,520. 1 Claim. (Cl. 119—45.)

A poultry nest comprising a box-like structure having an entrance, and composed of side walls having inturned top, bottom and rear flanges, a rear wall having inturned top, bottom and side flanges, the top and bottom flanges of the side and rear walls lapping, fasteners seating removably in said lapping flanges, a bottom seating removably on the bottom flanges of the side walls and secured by the bottom ones of the aforesaid fasteners, and a removable top.

1,461,304. ADJUSTABLE FENDER BRACE. FRED L. BRONSON, Wichita Falls, Tex. Filed Oct. 3, 1922. Serial No. 592,181. 1 Claim. (Cl. 280—152.)

A brace for the wheel fenders of a motor vehicle, comprising a sectional main bar arranged in front of and extending transversely of the radiator and having

its outer ends attached to the fenders, means by which the sections of the main bar may be adjusted inwardly in an endwise direction with respect to each other, and stay bars pivoted respectively at their upper ends to the

respective sections of the main bar and pivoted at their lower ends to a convenient portion of the vehicle adjacent the lower end of the radiator and adapted to raise the main bar when its sections are adjusted inwardly with respect to each other.

- 1,461,305. ARTIFICIAL TEETH. JOHN BROOKES and ALBERT EDWARD TOLLEY, Halesowen, England. Filed Aug. 28, 1922. Serial No. 584,702. 3 Claims. (Cl. 32—4.)

1. An artificial denture comprising a complete row of artificial teeth formed integrally and including molars, bicusps and incisors, the upper part of said row having a plurality of small openings therein, a nonmetallic plate moulded to fit the mouth, and projections on said plate entering said openings so as to unite the plate to the row of teeth.

- 1,461,306. AUTO CHAIN COUPLER. HENRY CAMPBELL, Liberal, Kans. Filed Dec. 15, 1921. Serial No. 522,606. 1 Claim. (Cl. 24—232.)

A connecting link comprising side plates, a central plate conforming to the contour of the side plates and positioned between the side plates, said plates having cut out portions extending from one of the respective edges thereof towards the central portions of the plates and having right angled portions, one of the walls of the right angled portions extending in parallel relation with one of the edges of the plates, the central plate having a curved cut out portion merging with the first mentioned cut out portions, a movable element posi-

tioned in the curved cut out portion and pivotally supported therein, said movable element having a cut out portion extending from one edge to align with the cut out portion of the plates and receive a link member, said movable member adapted to deliver a link to the cut out portion of the plates, and said movable member adapted to close the cut out portions to lock the link therein.

- 1,461,307. HAY DERRICK. CHARLES A. CHAPMAN, Grinnell, Iowa. Filed Mar. 30, 1922. Serial No. 548,110. 1 Claim. (Cl. 212—59.)

A derrick comprising a sill adapted to serve as a runner, a mast rotatably mounted on said sill, a pair of braces connected with the mast to permit rotation thereof and inclined from the mast downwardly and laterally to the sill and connected therewith, a third brace pivotally mounted on the mast to permit rotation thereof and inclined downwardly and away from the mast substantially midway between the first two sills, whereby said third brace may be swung pivotally in a vertical plane to a variety of positions and may be used for swinging the mast on the sills as an axis, and a hoisting mechanism supported on said mast above said braces, a detachable brace, and means for fixing said brace to said mast and said third brace.

- 1,461,308. ANCHOR PLATE. EUGEN CLARK and WILLIAM HARRISON CLARK, Juliette, Ga. Filed July 26, 1922. Serial No. 577,681. 1 Claim. (Cl. 238—198.)

In a device of the class described, a base plate provided with first and second overhanging flanges, the second flange being of less height than the first flange, and having an upstanding longitudinal rib; a rail including a flange extended beneath both flanges of the base plate, a web located between the flanges of the base plate and in contact with the inner edges of the first and second flanges of the base plate, and a ball engaged by the first flange of the base plate; an anchor plate disposed outside of the second flange of the base plate and comprising a solid depending rib extended between the rib of the second flange and the web of the rail, and engaging the ball of the rail, the anchor plate and the second flange having registering openings; and a securing element mounted in the said openings.

1,461,309. DEVICE FOR TRUING CONNECTING RODS. WILLIAM C. CORYELL, Wayne, Nebr. Filed June 5, 1922. Serial No. 566,000. 1 Claim. (Cl. 33—180.)

A device for truing and alining the axes of a connecting rod and a piston fitted thereon comprising a one-piece metal body having a substantially oblong intermediate flat faced portion adapted to be clamped between the jaws of a vise, the upper face of said portion being formed with a longitudinal groove extending through the ends thereof, said groove being designed to accommodate a portion of a gaging instrument, and cylindrical stub-axes extending from the ends of said oblong part, one of said axes being designed to extend through the bearing of said connecting rod, the axes being of different diameters to accommodate the different sizes of bearings.

1,461,310. SHOE-SHINING DEVICE. FREDERICK W. DUSCHE, East Orange, N. J., assignor of one-half to Leon M. Nussbaum, Newark, N. J. Filed July 6, 1921. Serial No. 482,701. 10 Claims. (Cl. 15—266.)

1. A shoe polishing device including a stand, a guide on said stand, a yoke slidably and hingedly connected to said guide, a spring roller in said yoke, and a polishing strip attached at one end to said roller and wound thereon.

1,461,311. DEMOUNTABLE RIM FOR TIRES. LEE B. HANCOCK, Richmond, Va. Filed Aug. 6, 1920. Serial No. 401,690. 2 Claims. (Cl. 301—21.)

1. In a wheel having a felly, a felly band encircling said felly circumferentially recessed on its outer face, the face of said recess being laterally inclined, the end

walls of said recess being laterally inclined, a rim fitting upon the band and having a circumferentially extending projecting portion on its inner face fitting said

recess and having its ends inclined complementarily to the inclined end walls of the recess and means for detachably holding the rim in place upon the felly band.

1,461,312. WHEEL PULLER. FRANK W. HAYWARD, San Francisco, Calif., assignor to Kimmerle Bros., San Francisco, Calif., a Partnership composed of Daniel S. Kimmerle and Larned Kimmerle. Filed Feb. 20, 1922. Serial No. 537,731. 2 Claims. (Cl. 29—85.)

1. A wheel puller comprising a conical frame having an axially extending bearing at its apex and a series of equally spaced radially extending bearings at its base, a gripping bolt screw threaded into each of the last-named bearings and carrying at its inner end a swiveled shoe formed with threads to co-act with the threads on a wheel hub and a thrust bolt screw threaded into the axial bearing and adapted to engage with the end of the axle of the wheel.

1,461,313. GYROSCOPIC TOY. HENRI HÉBRARD, Sceaux, France. Filed July 14, 1921. Serial No. 484,698. 2 Claims. (Cl. 46—45.)

1. A gyroscopic toy, comprising a frame; front and rear wheels supported thereby and adapted to travel

along a smooth supporting surface; a gyroscope mounted on the frame and having a driving connection leading

from it to one wheel; and a figure mounted on said frame and having movable parts operatively associated with said driving connection to be actuated thereby.

1,461,314. SEPARATING MECHANISM FOR THRASHERS. EMILE W. JONES, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed June 9, 1919. Serial No. 302,941. 4 Claims. (Cl. 130—26.)

1. In a threshing machine, a casing, straw carriers carried by said casing, a crank shaft for operating said straw carriers, a separator, located below said carriers and a revolving beater disposed above said separator and operatively connected with said crank shaft for evenly distributing the material to be separated across said separator.

1,461,315. LOCOMOTIVE SMOKE-BOX FRONT. ARTHUR T. KUEHNER, Elkrige, Md. Filed Oct. 4, 1919. Serial No. 328,562. 5 Claims. (Cl. 110—172.)

1. The combination with a locomotive, and a smoke box front closing the smoke box of the locomotive, of a series of mating plates extending around the peripheral margin of the front and forming a reinforcing ring

thereon, means coacting with certain of said plates for detachably securing the front in position, and means

adapted to extend between the smoke box and certain other oppositely disposed plates for pivotally supporting the front whereby the front may be swung to one side.

1,461,316. INDEXING PLATE FOR MILLING MACHINES. EUGENE RAYMOND LA CASSE, Syracuse, N. Y., assignor of one-half to Charles A. Haag, jr., Syracuse, N. Y. Filed May 9, 1921. Serial No. 468,049. 3 Claims. (Cl. 90—57.)

1. An indexing device for indexing heads of milling machines and the like which heads comprise a shaft connected to the indexing spindle through suitable reducing gearing, the device including inner and outer concentric index plates mounted concentric with the shaft, the inner plate having a circular series of equally spaced holes and a pointer mounted on the shaft to turn therewith and movable over the inner plate, and having means associated therewith for entering any one of the holes, the outer plate being fixed from movement and the inner plate being normally fixed from movement about its axis and being shiftable about its axis to change the position of the holes relatively to the pointer, means for determining the amount of such shifting movement to position one of the holes for a predetermined indexing and means for normally locking the inner plate from shifting movement, substantially as and for the purpose specified.

1,461,317. STRAINER AND STOPPER FOR PIPES. MINNIE LEBLESON, Guttenberg, N. J. Filed May 10, 1922. Serial No. 559,822. 2 Claims. (Cl. 4—35.)

1. As an article of manufacture, a strainer and stopper for pipes, formed with a hollow body having an annular upstanding wall with an open top and having

perforations in spaced proximity to its lower end, a bottom on the lower end of the annular wall, having an imperforate flat edge portion and having a perforated

concaved central portion, and hooks on the bottom of the body for releasably engaging a crossbar in the entrance of the pipe by partially rotating the body.

1,461,318. MULTIPLE-TUB WASHING MACHINE. IRVIN D. LENGEL, Reading, Pa., assignor to Knoll Manufacturing Co., Reading, Pa., a Corporation of Pennsylvania. Filed July 7, 1921. Serial No. 482,888. 6 Claims. (Cl. 68—15.)

6. A multiple-tub washing machine comprising a central standard having a fixed bearing bracket carrying a swingable agitator arm and agitator drive mechanism, a tub-carrying hub rotatably mounted on said standard and formed with a series of peripheral arm-engaging recesses, a series of detachable tub-supporting bracket arms having recess-engaging projections and adapted to form rigid spoke extensions of said hub, and a movable arm-engaging catch adapted to hold any one of said rotatably adjustable arms in operative relation to the agitator.

1,461,319. FLOOR-MOP ATTACHMENT. PEARL HART MACY and JAMES SYDNEY MACY, Weehawken, N. J. Filed Nov. 24, 1920. Serial No. 426,113. 6 Claims. (Cl. 15—246.)

1. An attachment for the handle of a cleaning implement comprising an arm disposed in angular relation to the handle above the lower working end thereof, and means for attaching said arm to the handle, said arm being adapted to engage under and lift the edge of a floor covering during the operation of the implement.

1,461,320. SPARK PLUG. JOHN MARKS, Pearl River, N. Y. Filed July 24, 1920. Serial No. 398,744. 4 Claims. (Cl. 123—169.)

1. A spark plug comprising a core made of non-conducting material, a sleeve surrounding the bottom part of the core, the sleeve and the core having co-acting parts to limit the downward movement of the sleeve on the core, a terminal on the core terminating in a point at the bottom of the core, a thimble screwing on the terminal, a nut on the terminal so as to form a binding post, and a collar with an extension insulated from the said sleeve having means for connecting an electric circuit thereto and having a movable element to be placed in and out of contact with the thimble, the thimble resting on the collar.

1,461,321. FRAME FOR THE HORIZONTAL DEVELOPMENT OF FILM PLATES. PAUL MATHIOTTE, Neuilly-sur-Seine, France, assignor to Pathe Cinema, Anciens Etablissements Pathe Freres, Paris, France. Filed Aug. 9, 1922. Serial No. 580,599. 2 Claims. (Cl. 95—100.)

1. A frame for the horizontal development of photographic film plates, comprising a rectangular frame body, two handles secured on said frame body, angle brackets secured on said frame body, said brackets protruding under the bottom face of the frame body, stud shafts on said brackets and cam shaped levers pivoted on said stud shafts and adapted to clamp the film plate upon the frame body.

1,461,322. AMUSEMENT APPARATUS. HYLIA FREDERICK MAYNES, Gaines, Pa. Filed Dec. 3, 1921. Serial No. 519,585. 7 Claims. (Cl. 104—53.)

4. An amusement apparatus comprising a substantially circular trackway, a car adapted to run upon said trackway, a collapsible tunnel adapted to enclose the car

and move relative thereto, a turntable at the center of the trackway, arms radiating from said turntable

pivoted thereto and attached to the tunnel, and means for swinging the arms about their pivots to collapse and extend the tunnel.

1,461,323. LAWN MOWER. JOHN W. PETERS, Roslyn, N. Y. Filed Mar. 2, 1921. Serial No. 449,259. 3 Claims. (Cl. 191—12.)

1. A lawn mower a propelling motor thereon, a flexible cable extending from the mower to a switch under the control of the operator, said switch functioning to stop and start the propelling motor and to control the direction of travel of the mower, and a flexible cable extending from the operator to a source of current supply.

1,461,324. APPARATUS FOR COKING LIQUEFIABLE BITUMINOUS MATERIALS. FRANZ PUENING, Pittsburgh, Pa., assignor to American Tar Products Company, Chicago, Ill., a Corporation of Delaware. Filed Dec. 20, 1920. Serial No. 431,854. 10 Claims. (Cl. 202—4.)

10. A retort mechanism, comprising, in combination; a retort receptacle, a plurality of suspension members engageable with said receptacle for holding the latter suspended, and means for releasing said suspension members in unison to permit dumping of said receptacle, substantially as specified.

1,461,325. OILER FOR ENGINES. WALTER A. RARIG, Oakland, Calif. Filed Dec. 1, 1917, Serial No. 204,926. Renewed Mar. 26, 1923. 9 Claims. (Cl. 184—11.)

1. A sight glass of the character described, comprising a plate having an inlet and an outlet opening therein, a transparent tubular member having one end fitted against one face of the plate and having said openings communicating therewith, a cap closing the other end of said tube, and a connecting rod detachably connecting said cap and plate together, whereby the parts are maintained in position.

1,461,326. HAIR CLIPPER. WALTER HUNT REDMAN, Newark, N. J., assignor, by mesne assignments, to H. Boker & Co., Inc. (of N. J.), New York, N. Y., a Corporation of New Jersey. Filed May 2, 1919. Serial No. 294,237. 4 Claims. (Cl. 30—1.)

1. In an instrument of the character described comprising a comb-plate, a cutter-plate thereon having a smooth uniform flat upper surface, a cover-plate having a smooth flat lower surface and means for operating the cutter-plate, in combination, a frame interposed between said flat upper surface of the cutter-plate and the said flat lower surface of the cover-plate and connected with the cover-plate, and ball-bearings carried by said frame and engaging the said upper flat surface of said cutter-plate, said frame comprising an upper plate member engaging the forward flat lower surface of said cover-plate to the front edge of said cover-plate, an exposed front member extending downwardly from the front edge of said upper plate member and at the front edge of said cover plate, ends and a rearwardly extending lower plate member containing slots in which said ball-bearings are located, said cover-plate having adjacent to its ends downwardly projecting studs which extend through said upper plate member, said cutter-plate and said comb-plate.

1,461,327. TREAD SECTION FOR ANTISKID DEVICES FOR VEHICLE WHEELS. JOHN R. REYBURN, Fairfield, Conn., assignor to American Chain Company, Inc., a Corporation of New York. Continuation of application Serial No. 305,139, filed June 18, 1919. This application filed Mar. 1, 1921. Serial No. 448,764. 14 Claims. (Cl. 152—14.)

1. An anti-skid device for vehicle wheels, comprising a tread element including a chain link having oppositely arranged strands, and contact means for said strands comprising a section of wire extending transversely of the link and bent about said strands and connecting the same.

1,461,328. COLLAR HOLDER. EVERETT IRVING ROGERS, Jr., Providence, R. I. Filed Nov. 15, 1920. Serial No. 424,148. 2 Claims. (Cl. 24—81.)

1. A collar holder comprising a rigid front bar constructed of a single faced metal pressed to form a rearwardly opening channel, said metal having adjacent the center thereof at the rear edge, clip extensions for engaging a back bar; and a resilient back bar operatively related to said front bar and providing a centrally disposed loop-like member for receiving in permanent relation said clip extensions.

1,461,329. MACHINE FOR TREATING CINEMATOGRAPHIC FILMS. GEORGES AUGUSTIN SALINS, Vincennes, France, assignor to Pathe Cinema, Anciens Etablissements Pathe Freres, Paris, France. Filed Mar. 29, 1922. Serial No. 547,716. 6 Claims. (Cl. 95—94.)

1. A machine for treating cinematograph films comprising a treating vat, two upper longitudinal shafts arranged in the upper part of said vat on a level higher than the upper edge of said vat, an intermediate longitudinal shaft on a lower level than the upper shafts, two lower longitudinal shafts arranged in the bottom of the vat, means for supporting the lower shafts at a variable height in the vat, film supporting rollers placed end to end upon said shafts and so arranged that the film is transported in the longitudinal direction of the vat for a distance equal to the length of one roller during a vertical zig-zag movement of said film from one of the upper rollers to the next adjacent upper roller and means for feeding the film around the rollers.

1,461,330. MACHINE FOR TREATING SKEINS OF THREAD. MIGUEL SANTALO, Barcelona, Spain. Filed July 8, 1922. Serial No. 573,735. 2 Claims. (Cl. 8—19.)

1. A machine for treating skeins, having in combination, a vat containing the bath, a plurality of pairs of rollers, the upper roller of each pair being adjustable, two endless parallel chains following a path partly inside and partly outside of the bath, a pair of positively driven pulleys to impart motion to said endless chains, wheels for guiding said endless chains outside of the

bath, wheels for guiding said endless chains inside of the bath and mounted loosely on the axes of said rollers inside of the vat so as to allow the skeins carried by said chains to follow a zigzag course while passing

through the pairs of rollers, and driving mechanism to set in motion said rollers contained inside of the bath at a peripheral speed slightly greater than that of the chains.

1,461,331. TYPEWRITING MACHINE. PETER L. SCHMIDT, Mohawk, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed July 24, 1922. Serial No. 576,944. 4 Claims. (Cl. 197—161.)

1. In a typewriting or like machine, the combination of two ribbon spools, two spring pressed independently operable pivoted members, each comprising a sheet metal combined ribbon contact and reversing device with its parts all rigidly united, one member associated with each spool and having its contact bearing against the outer surface of the ribbon thereon and moving inwardly towards the axis of its spool to bring about a reversal in the direction of the feed of the ribbon, a driving gear for each ribbon spool and on which the spool is directly mounted and supported, a longitudinally shiftable driving shaft carrying pinions, one movable into mesh with its driving gear when the other is moved out of mesh with its companion driving gear, and two independently adjustable cams on said shaft and with each of which directly coacts the associated combined ribbon contact and reversing device member to cause the shaft to be shifted longitudinally by a camming action and reverse the direction of feed of the ribbon, whereby there is a direct meshing between the pinions on the shiftable shaft and the driving gears for the spools, a direct connection between the driving gears and the spools and a direct control between each of said combined members with the ribbon on its spool on the one hand, and between the member and its associated cam on the other hand.

1,461,332. PAPER-CUP-DISPENSING DEVICE. JOSEPH SCHORFE, New York, N. Y. Filed Apr. 1, 1922. Serial No. 548,601. 1 Claim. (Cl. 211—8.)

A dispensing apparatus for flat paper cups having transversely folded edges near their front ends, said

apparatus comprising a container having a relatively low front wall, a spring locked front plate hinged to said wall, a bottom plate having raised flanged side edges containing slots, means passing through the slots for adjustably securing the flanges within the side walls of the container, a hook adapted to contact with the folded edge of the lowermost cup, vertical guides extending in-

wardly from the rear wall of the container and from said front plate, said guides making contact with the folded cups, means for pressing the cups upon the surface of said bottom plate, a lever pivoted on said plate to move in a horizontal plane, a spring for retracting said lever, and an operative connection between said lever and said hook.

1,461,333. HORSESHOE. CHARLES SOLTESZ, New York, N. Y., assignor of one-half to Josef R. Hladish, New York, N. Y. Filed May 14, 1921. Serial No. 469,404. 1 Claim. (Cl. 168—31.)

In a horseshoe of the class described including a tread member, a plurality of curved bodies having a substantially semi-circular cross-section, a lower corrugated ground-engaging face on each of said bodies, and an upper flat tread-engaging face, eyes on said bodies allowing the passage of fastening means for fastening said bodies to said tread, and a cross-bar for strengthening said bodies.

1,461,334. PHONOGRAPH. WILLIAM M. VENABLE, Pittsburgh, Pa. Original application filed Apr. 1, 1920, Serial No. 370,521. Divided and this application filed Aug. 12, 1921. Serial No. 491,656. 11 Claims. (Cl. 224—13)

1. In disc phonograph apparatus, the combination of a soundbox with a stylus, a vertically pivoted guide arm therefor, a vertical pivot connecting the soundbox to the

guide arm, and a feeding mechanism for the soundbox, said feeding mechanism also operating to move the soundbox on its pivot to maintain the stylus axis in a

plane substantially tangential to the direction of rotation of the disc at the point of stylus contact with said disc.

1,461,335. DRAWING IMPLEMENT. KENNETH D. VOSLER, South Amboy, N. J. Filed June 23, 1920. Serial No. 391,093. 2 Claims. (Cl. 33—104.)

1. A drawing implement comprising a thin flat body having a comparatively long straight base, two straight sides converging from the ends of the base at 60° angles thereto, and two other straight sides extending at 150° angles, from the ends of said first mentioned sides remote from the base and meeting in a 120° angle.

1,461,336. HOLDER OR CABINET FOR CARRYING TALKING-MACHINE RECORDS. HANS WEIDE, Brooklyn, N. Y., assignor to Lorenz & Weide, New York, N. Y. Filed Aug. 4, 1921. Serial No. 489,676. 8 Claims. (Cl. 211—16.)

1. A record holding cabinet comprising a bottom section and a top section hinged thereto, the top section forming the entire top and end walls of the cabinet whereby the top section when swung to open position upon the hinges will permit the records to be removed laterally from the cabinet.

1,461,337. WALL BOARD. HOWARD FREDERICK WEISS, Madison, Wis., assignor to C. F. Burgess Laboratories, Madison, Wis., a Corporation of Wisconsin. Filed Feb. 26, 1919. Serial No. 279,288. 15 Claims. (Cl. 18—48.)

1. The method of manufacturing composite board by a continuous process, which comprises shredding fibrous

material with a binding agent in a substantially dry and solid condition to produce an intimate mixture, forming the dry mixture into a layer of the desired thickness,

compressing such layer, heating the same to soften the binding agent, and again compressing to consolidate the mixture into a board of nonhydrolyzed fiber.

1,461,338. LOGGING ENGINE. OSCAR A. WIRKKALA, Rome Township, Whatcom County, Wash. Filed Apr. 21, 1921. Serial No. 463,329. 7 Claims. (Cl. 254—185.)

1. In a logging donkey engine in combination, a donkey engine frame, three cable drums mounted in column on parallel shafts for rotation on said frame, two prime-mover shafts mounted parallel with said drum shafts for revolution on said frame, separately controllable power connections between each of said prime-mover shafts and each of said drums adapted to transmit power of rotation from either of said prime-mover shafts to each of said drums without connection with either of the other of said drums, and separately controllable means to operate each of said prime-mover shafts.

1,461,339. IGNITION REGULATOR FOR INTERNAL COMBUSTION ENGINES. GOTTFRIED WIRNER, Plainfield, N. J., assignor, by mesne assignments, to Connecticut Telephone and Electric Co., Inc., Meriden, Conn., a Corporation of Connecticut. Filed May 3, 1912. Serial No. 695,803. 43 Claims. (Cl. 123—99.)

1. In an internal combustion engine, means for timing the ignition comprising a movable member subjected to a fluid pressure determined by the combined effect of the speed of the engine and the load thereon.

1,461,340. RADIOACTIVE SPRAY MATERIAL. RALPH RANDOLPH ADAMS, Yonkers, N. Y. Filed Aug. 20, 1915. Serial No. 46,492. Renewed Nov. 24, 1922. 5 Claims. (Cl. 167—6.)

1. A spray material for stimulating plant growth consisting of a suitable vehicle containing radium in combination with an adhesive material, substantially as described.

5. A spray material for stimulating plant growth consisting of radium-bearing barium salts in combination with an adhesive material and arsenate of lead, substantially as described.

1,461,341. DIRIGIBLE HEADLIGHT. PETER N. ANDRESEN and PHILLIP J. JEFFWAY, Salem, Oreg. Filed Apr. 5, 1922. Serial No. 549,721. 2 Claims. (Cl. 240—61.)

1. An automobile headlight supporting and tilting mechanism, comprising a rod and means to secure it between the front fenders of the automobile, a sleeve rotatably mounted on said rod, lamp-supporting brackets adjustably mounted on said sleeve, an adjustable rod connected to one of said brackets, a lever adapted to be centrally pivoted on the dash-board of the automobile, said adjustable rod being connected to the lower end of said lever, manually operable means connected to the upper end of said lever, and a spring tending to swing said lever so as to elevate the focal axes of the lamps.

1,461,342. HOLDER FOR NURSING BOTTLES. RUSSELL E. BANNON, Springfield, Mass. Filed Aug. 26, 1920. Serial No. 406,248. 3 Claims. (Cl. 248—65.)

2. A bottle holder consisting of a frame provided with a laterally disposed loop adapted to receive the neck of an inverted bottle, and a yoke pivoted to the frame above the loop and provided with means for supporting the bottle in more than one inclined position.

1,461,343. CLUTCH DEVICE FOR MOTOR VEHICLES. MARIUS JEAN BAPTISTE BARBAROU, Paris, France. Filed Apr. 21, 1922. Serial No. 555,858. 2 Claims. (Cl. 192—69.)

1. In a clutch device for motor vehicles, the combination of clutching members, rocking levers adapted to act on the same, a thrust-bearing adapted to push said levers in one direction, return springs adapted to move

said levers in the opposite direction, a sheet metal member having radial slots through which the levers are adapted to extend, a circular abutment member adapted

to limit the rocking movement of the levers towards the thrust-bearing and means on the sheet metal member for retaining said abutment member in position.

1,461,344. LATHER BRUSH. MARCUS B. BEHRMAN, New York, N. Y., assignor to Lox Seal Corporation, Brooklyn, N. Y., a Corporation of New York. Filed July 22, 1922. Serial No. 576,679. 4 Claims. (Cl. 15-194.)

1. A lather brush comprising a bunch of bristles or the like having a knot-end encompassed by a metal band, a ferrule having an inner screw thread and in its lower portion a seat for said band, a threaded flat binding disk screwed into the lower portion of said ferrule against the knot of the bunch, and a handle having a threaded shank end screwed into the thread of the ferrule at the upper end portion thereof and also a shoulder to engage the upper edge of the ferrule and arrest said shank end above said disk, said disk having a central upwardly extending operating stem by means of which the disk may be screwed to position.

1,461,345. METHOD AND MECHANISM FOR TESTING GAS. ALEXANDER CLARKE, Charleston, W. Va., assignor to United Hydro-Carbons Company, a Corporation of West Virginia. Filed Mar. 4, 1920. Serial No. 363,256. 9 Claims. (Cl. 23-3.)

1. The herein-described method of treating gas for determining its gasoline content, which consists in com-

pressing and cooling, a predetermined quantity of the gas by the action of a cooling liquid under pressure

adapted to cause the gasoline content to be converted into a liquid state, and measuring the liquid gasoline.

1,461,346. VALVE-SPRING COMPRESSOR FOR AUTOMOBILE AND OTHER ENGINES. DOMINICK CLERICO, Yonkers, N. Y. Filed Jan. 27, 1922. Serial No. 532,065. 6 Claims. (Cl. 29-86.3.)

1. A tool of the character described comprising two coating jaw members provided with jaws on their forward ends adapted to be engaged with a spring and at their rear ends being turned toward each other and pivoted together, two handle bar members turned toward each other at their forward ends and pivoted together and crossing said jaw members forwardly of their pivot and being pivotally secured thereto, and a rack normally resisting outward movement apart of said jaw members and handle bar members.

1,461,347. CARRIAGE PULL BAND FOR TYPEWRITING AND LIKE MACHINES. HARRY E. COOK, Washington, D. C., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Sept. 24, 1920. Serial No. 412,426. 1 Claim. (Cl. 197-60.)

A pull band for typewriting and like machines, the body portion of which is made wholly of textile material and has rosin incorporated in its otherwise untreated body sufficient in quantity to render the band stiff enough to thread through parts of a machine and clingy enough to prevent slipping.

1,461,348. TWO-STROKE ENGINE. RICHARD HALLAND DICKINSON, Farnham, England. Filed Nov. 27, 1920. Serial No. 426,729. 11 Claims. (Cl. 123—69.)

1. A two-stroke engine comprising a cylinder, a piston reciprocable within said cylinder, one end of said cylinder forming the working chamber, the other end of said cylinder forming the pump chamber, an exhaust valve in said working chamber, an inlet port in said pump chamber, a transfer port adjacent to said inlet port, a passage connecting said ports, means for admitting air only through said inlet port, and means for carburetting said air after compression in said pump chamber.

1,461,349. WATER BACK FOR HOT-AIR AND OTHER FURNACES. JOSEPH HOFFENTHALER and CHARLES H. FISCHER, Philadelphia, Pa. Filed Feb. 27, 1922. Serial No. 539,463. 4 Claims. (Cl. 126—34.)

1. A water back for a heater of the character stated having a vertically-disposed body, and a closing cap plate provided with a flange outwardly extended for contact with an offset shoulder within the furnace, there being a depending diaphragm within the body extending to nearly the bottom.

1,461,350. FISH-SHIPPING TANK. GOTTFRIED L. A. FRIEDRICH, New York, N. Y. Filed July 3, 1922. Serial No. 572,615. 4 Claims. (Cl. 119—5.)

1. A fish shipping tank, comprising a substantially rectangular flexible waterproof hollow body with an open top and having an outlet in its lower part, a flexible chute extending from the edge of the outlet opening of the body and the chute being longer than the height of the body, and means on the upper edges of the walls of the body whereby the body may be removably suspended to a support.

1,461,351. CLEANING COMPOSITION. DANIEL E. HAKES and AUGUST LAPEROU, Calexico, Calif. Filed Dec. 17, 1919. Serial No. 345,463. 1 Claim. (Cl. 87—5.)

The herein described composition of matter, consisting of olive oil, 1 ounce; water, 1 quart; the extractive matter of two ounces of soap bark; washing powder, 6 ounces; glycerine, 1 ounce; turpentine, $\frac{1}{2}$ ounce; aqua ammonia, $\frac{1}{2}$ ounce; baking soda, 2 ounces; and wood flour, $1\frac{1}{2}$ quarts, all mixed and boiled to form a paste.

1,461,352. CAR SIGNAL DEVICE. ERLE H. HAND, Stapleton, N. Y. Filed Mar. 25, 1922. Serial No. 546,663. 14 Claims. (Cl. 246—196.)

1. In a car signal device, a contact member carried on a car, a shaft mounted above said member, a hub rotating on said shaft, and provided with radial arms arranged in pairs of different lengths, and rollers mounted in the ends of said arms to actuate said contact member for opening and closing an electric circuit.

1,461,353. LIFTING JACK FOR MOTOR VEHICLES. ABNER L. HOLTON, Big Stone Gap, Va. Filed June 12, 1922. Serial No. 567,691. 7 Claims. (Cl. 254—74.)

1. In combination with a motor vehicle wheel a device consisting of a substantially U-shaped shoe or yoke adapted to be fitted about the tire and felly of said motor vehicle wheel, having an arm extending from the upper

leg of the shoe or yoke at substantially right angles thereto, the arm having an elongated hole near the top through which to pass a threaded bolt, said bolt having on

one end a wheel supporting lug and on the opposite end a thumb nut; and a latch to fasten the device to the wheel.

1,461,354. WASHING MACHINE. TOYOJIRO INAKI, Fresno, Calif. Filed Sept. 25, 1919. Serial No. 326,415. 3 Claims. (Cl. 68—37.)

1. A washing machine comprising a receptacle for washing fluid; a frame supporting said receptacle; a standard secured to said frame and having a pin secured to its top; another standard removably mounted on said frame and provided with sockets on its lower edge; pins on the frame adapted to cooperate with said sockets to hold the other standard in position on the frame; a head bar connected to said other standard and having an opening at one end adapted to cooperate with the pin in the top of the standard secured to said frame; a hanger secured to said head bar; a roller positioned above said receptacle and journaled in said hanger and said other standard; an endless apron supported by said roller; and means for revolving said roller and apron for the purpose set forth.

1,461,355. ATTACHMENT FOR JACKS. STEVE A. IRWIN, Robinson, Ill. Filed Jan. 25, 1922. Serial No. 531,692. 1 Claim. (Cl. 254—111.)

As a new article of manufacture, a handle carrying attachment for jacks formed as a single casting and comprising a main section having an elongated solid shank and a handle receiving socket extending from one end of said shank, an auxiliary handle receiving socket extending from the main section adjacent the inner end

of the socket of the main section at an angle for extending upwardly when the device is in use, a brace bar ex-

tending between said sockets, and jack engaging abutments extending from the upper and lower sides of said shank.

1,461,356. COLOR TRANSPARENCY. WILLIAM V. D. KELLEY, Newark, N. J., assignor to Prizma, Incorporated, Jersey City, N. J., a Corporation of Maine. Filed Aug. 25, 1920. Serial No. 405,787. 3 Claims. (Cl. 88—16.4.)

1. Process of making a color transparency consisting in printing from a single negative in one operation images in different layers of multiple layer positive, developing both images, and coloring one image in one color and the other in a contrasting color.

1,461,357. HOT-BLAST STOVE. FRED E. KLING, Youngstown, Ohio. Filed June 27, 1922. Serial No. 571,181. 6 Claims. (Cl. 263—19.)

1. In a hot blast stove, a plurality of relatively small vertical flues forming vertical checkerwork, said flues having their walls reduced in thickness from a point intermediate their ends to their top and having wedge-shaped tops, and a plurality of relatively large horizontal flues forming horizontal checkerwork above said vertical flues, said horizontal checkerwork communicating with the combustion chamber and with the distributing chamber above said vertical flues, all substantially as and for the purpose described.

1,461,358. PLATE-FEEDING MECHANISM. CHARLES A. KLOMAN, Bellevue, Pa., assignor to The Colonial Engineering Company, Pittsburgh, Pa., a Corporation of Delaware. Filed May 25, 1921. Serial No. 472,496. 13 Claims. (Cl. 271—37.)

1. In a plate-feeding machine, means for supporting a stack of plates, pick-up rolls for engaging one edge of the upper plate of the stack and for lifting it above the stack, and means for engaging the elevated edge of the plate and for sliding the plate across the stack.

1,461,359. ELECTRIC GAS LAMP. ANTON LEDERER, Vienna, Austria, assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed May 16, 1914. Serial No. 839,091. 14 Claims. (Cl. 176—122.)

1. The method of lowering the starting potential of a commercially unfinished electric discharge device, which comprises vaporizing and forming in the device a thin deposit of an electro-conductive material, as a step preliminary to its commercial use.

1,461,360. ELECTRIC GAS LAMP. ANTON LEDERER, Vienna, Austria, assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed July 18, 1914, Serial No. 851,836. Renewed May 3, 1921. Serial No. 466,401½. 17 Claims. (Cl. 176—122.)

1. An electric gas lamp comprising an envelope enclosing a gaseous atmosphere, non-alkali metal electrodes and a relatively small quantity of an alkali metal in the form of a deposit.

1,461,361. FISH-TAPE PULLER. HAROLD E. LUBKER, Grand Junction, Colo. Filed July 12, 1922. Serial No. 574,404. 4 Claims. (Cl. 294—3.)

1. A tool of the character described comprising a pair of handles, jaws carried by said handles, pivotal connection between the outer ends of said jaws, said jaws being adapted to receive an article to be gripped therebetween, and means associated with said pivotal connection for retaining said jaws against lateral displacement.

1,461,362. NONGLARE REFLECTOR. JAMES N. LYLES, Addison Heights, Va. Filed Sept. 1, 1922. Serial No. 585,681. 3 Claims. (Cl. 240—41.)

1. A parabolic lamp reflector having a plurality of straight horizontally arranged stepped portions extending entirely across the upper half thereof from side to side and arranged to direct light rays received from a source of light placed at its focus downwardly and substantially at the same angle of inclination at all points in the length of said stepped portions.

1,461,363. UTENSIL HOLDER. FRANK R. MCGEE, Steubenville, Ohio. Filed Dec. 30, 1921. Serial No. 525,913. 3 Claims. (Cl. 211—17.)

1. The combination with a wall of a utensil rack comprising a channel shaped assembly bar arranged with its flanges projecting toward the wall and its web forming a forward face, shelf supporting brackets secured to and extending upwardly from the upper flange of said assembly bar, a shelf supported on said brackets, a plurality of utensil supporting members secured to the web of said assembly bar, and a plurality of wall supporting brackets each of which is pivotally secured to the upper and lower flanges of said assembly bar and rigidly secured to the wall.

1,461,364. DEVICE FOR CONDENSING GASES. CHARLES R. MABEE and MAY C. MABEE, Buffalo, N. Y. Filed Feb. 5, 1915, Serial No. 6,359. Renewed Dec. 7, 1922. 12 Claims. (Cl. 257—197.)

1. In an upright surface condenser, the combination of a cylindrical container, a plurality of annular steam chests mounted therein and separated to form therebetween a plurality of annular spaces, means for intro-

ducing a cooling fluid between the exterior surfaces of said annular steam chests, and connected rotors oper-

atively associated one with each of said spaces whereby to circulate the cooling fluid over the surfaces of the steam chests.

1,461,365. OIL-WELL BAILER. CHARLES WILLIAM MORRIS, Laramie, Wyo. Filed Apr. 7, 1922. Serial No. 550,286. 2 Claims. (Cl. 166—19.)

1. A well bailer, comprising a hollow cylinder open at bottom and closed at top; scoop shaped jaws hinged at the lower end and adapted to open in conformity with the contour of the cylinder and to close together on a central line; shanks rigidly secured to the jaws and extended inwardly; connecting rods pivoted at their lower ends to said shanks; a plate secured to the upper ends of said connecting rods; a square draw rod passing freely through the said plate and freely through the top of the cylinder, and ending in an eye adapted to engage a line; stops on the draw rod above and below the cylinder top; cross bars oppositely mounted inside the cylinder; hook-arms oppositely pivoted to the draw rod, and carrying hooks adapted to swing out and engage the cross bars; and chains attached to the hook arms and extended freely up through the top of the cylinder.

1,461,366. COOKING UTENSIL. HAROLD V. MULFORD and WALTER D. FELTY, Paulsboro, N. J. Filed Apr. 7, 1922. Serial No. 550,348. 3 Claims. (Cl. 53—1.)

1. A lid of the class described having a flat peripheral portion, a conical portion contiguous therewith provided with an opening at its apex, tongues punched out of said lid adjacent the said opening, a valve associated with the opening in the lid, said valve comprising a basket of substantially U shaped cross-section, said basket being adapted to be supported by said tongues and having an opening in its bottom, a flat float disposed within the basket consisting of a central portion adapted to seal the opening in the lid, and radial arms extending from said central portion for holding said float in spaced relation to the aforesaid opening in the basket.

2. A lid for a cooking vessel having a handle integral therewith, said lid being adapted to be supported on a cooking vessel below the upper edge thereof, a shoulder portion on said handle shaped to span the upper edge of the vessel, and a spring tongue punched out of the said handle, said tongue being curved to resiliently engage the upper edge of the vessel.

1,461,367. CONDENSER OR ILLUMINATOR FOR MICROSCOPES. HARVEY N. OTT and HARRY G. OTT, Buffalo, N. Y., assignors to Spencer Lens Company, Buffalo, N. Y. Filed May 3, 1920. Serial No. 378,371. 10 Claims. (Cl. 88—40.)

1. In a specimen illuminator for microscopes, the combination of a source of light, a device for directing the light rays from said light to the specimen, a support in which said ray-directing device and the source of light are mounted, means for adjusting said support with said ray-directing device and source of light carried thereby relatively to the optical axis of the microscope, and means for independently adjusting said source of light relatively to the ray-directing device.

1,461,368. APPARATUS FOR USE IN MAKING BELTS OR THE LIKE. CHARLES H. PAEPLOW, Buffalo, N. Y. Filed May 16, 1922. Serial No. 561,402. 11 Claims. (Cl. 18—17.)

1. In an apparatus for treating belting and the like, the combination of a platen adapted to receive the belt, a side bar movable toward and from said belt, slides arranged at a side of said platen and connected with said side bar, and means for moving said slides to cause said side bar to move toward and from a belt.

1,461,369. CONCRETE WALL. ALONZO GUSTAVUS REYNOLDS, Oakland, Calif. Filed Jan. 20, 1920. Serial No. 352,707. 1 Claim. (Cl. 72—6.)

A wall comprising spaced walls formed from plastic slabs, interlocking means between the vertical ends of said slabs and in vertical alignment, plastic columns disposed between spaced walls at the points of engagement of the slabs which slabs engage each other centrally of the column, horizontally disposed reinforcing rods extending through the slabs, the ends of said reinforcing rods extending inwardly at right angles from the slabs at points spaced from their ends, the inwardly extending portions of the horizontally disposed reinforcing rods being bent to form outwardly extending hooks, said hooks being imbedded in the plastic columns, and vertically disposed reinforcing rods extending through said columns and through said hooks thereby tying the adjacent ends of the slabs to the columns.

1,461,370. OVERLOAD DEVICE. CHARLES H. RIPPL, Cleveland, Ohio, assignor to The Electric Controller & Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 14, 1921. Serial No. 522,231. 3 Claims. (Cl. 200—122.)

1. In an overload device for an electric circuit, a switch for controlling the circuit, an expansive wire electrically connected to the circuit for controlling the switch, a coil electrically connected to the circuit and arranged to transmit heat to the wire, the thermal capacity per linear unit of the expansive wire and of the wire of the coil being so proportioned that, when current above a predetermined value traverses the expansive wire and coil, the former will effect the operation

of the switch without overheating the coil and, when current above a predetermined lower value traverses the expansive wire and coil, the coil will transmit sufficient heat to the expansive wire to effect the operation of the switch before the coil becomes overheated.

1,461,371. ELEVATING TRUCK. ANDREW SONANDER, Rutland, Vt., assignor to Howe Scale Company, Rutland, Vt., a Corporation of Vermont. Filed Nov. 17, 1919. Serial No. 338,730. 3 Claims. (Cl. 254—10.)

1. In a truck or the like, a vehicle frame, a second frame, rock shafts mounted on fixed parallel axes on said vehicle frame, means for oscillatably connecting said rock shafts, lever arms keyed to said rock shafts, one of said lever arms when oscillated by the other lever arm being adapted to elevate one end of said second frame and the other of said lever arms being suitably disposed to be oscillated by said second frame when an elevating movement is imparted thereto, and means for elevating the other end of said frame.

1,461,372. PROCESS OF TREATING ORE AND LIKE MATERIALS. WALTER E. TRENT, Washington, D. C., assignor to Trent Process Corporation, Washington, D. C., a Corporation of Delaware. Filed Feb. 21, 1920. Serial No. 360,452. 15 Claims. (Cl. 75—17.)

1. The method of treating ore and like materials, consisting in subjecting divided particles of ore or the like to heat treatment to place the same in adhesive condition, in projecting the treated ore upon a collecting surface to form a coherent mass and in then applying heat to the mass to smelt the ore.

1,461,373. LUGGAGE CARRIER. JOHN W. WHITESIDE, New York, N. Y. Filed Feb. 13, 1922. Serial No. 536,151. 3 Claims. (Cl. 224—29.)

1. A luggage carrier for taxicabs and the like, comprising a supporting column, and an arm carrying bracket

adjustable on said supporting column, one arm of said bracket being adjustable, said adjustable arm also being provided with an adjustable extension.

1,461,374. SELF-SERVING STORE. LORENZO NORWOOD
ANDERSON, Hawkinsville, Ga. Filed Feb. 14, 1921.
Serial No. 444,687. 5 Claims. (Cl. 211-8.)

3. A self-serving store having at the front a lobby and at its front portion shelves on opposite sides of the lobby, shelves arranged in zig-zag fashion running along the side walls of the store from front to rear thereof, entrance and exit gates for the lobby, checkers' stands adjacent said gates but in rear thereof, shelves arranged in the middle portion of the rear part of the store, and another checker's stand arranged between said last-mentioned shelves and the first-mentioned checkers, said checkers' stands being accessible from either side of the store.

1,461,375. TOP FOR CONTAINERS. CHARLES S. BARON,
Tiffin, Ohio. Filed July 2, 1921. Serial No. 482,048.
9 Claims. (Cl. 221—13.)

1. The combination with a container top provided with a discharge spout, of a lid for the spout hinged to the top, and lid opening and closing mechanism comprising a gravitationally actuated bent lever hinged to the top and operative within a slot provided for it in the lid.

1,461,376. CUTTING BUR. FRANCIS A. BARTLETT,
Stamford, Conn. Filed Nov. 29, 1921. Serial No.
518,546. 3 Claims. (Cl. 144-219.)

1. In the art of tree surgery, means for gouging out a cavity to be filled, comprising a power driven cutting bur completely free and controllable so that it may be

operated at various angles and is freely movable in any direction, said cutting bur comprising a plurality of spaced discs having cutting teeth on their peripheries, the discs intermediate the ends of the bur being of larger diameter than those adjacent the ends thereof to give a curved contour to the bur, and a guiding flange at the inner end of the bur of sufficient diameter and thickness to afford with relation to the contour of the bur a guiding bearing upon which the bur may be rocked to govern the penetration of the teeth.

1,461,377. GAS APPARATUS. FRANK BELLVILLE, EDWIN A. BELLEVILLE, and ROBERT S. HENDERSON, Twin Falls, Idaho. Filed Apr. 9, 1920. Serial No. 372,569. 1 Claim. (Cl. 48—190.)

In apparatus of the class described, the combination of a generating tank, a chamber, a pipe leading from said tank to the chamber to convey the contents of the tank directly to the chamber, a pipe for supplying air under pressure to the tank, a branch leading directly from said pipe to said chamber, and a blowpipe connected with said chamber for receiving therefrom the contents delivered to it by said two pipes.

1,461,378. ANTISKID DEVICE FOR VEHICLE
WHEELS. ANDREW J. BORST, Jr., Buffalo, N. Y.
Filed July 12, 1918. Serial No. 244,557. 11 Claims.
(Cl. 152—2.)

1. An anti-skid device for vehicle wheels, comprising a chain structure having tread chains, removable gripping elements secured to links of said tread chains, each gripping element comprising an elongated body portion and prongs passed through one of said links and curved around the opposite side bars thereof, and means embodied in the structure of said body portion to cause the calk to be easily removed from said link when worn to a certain extent.

1,461,379. AIR-PUMP PRESSURE-REGULATING DEVICE. HARRY BREWER, Sidney, Nebr. Filed Apr. 15, 1922. Serial No. 553,103. 2 Claims. (Cl. 230—24.)

1. The combination with the cylinders of an air pump, said cylinders having a pipe connection with a relief valve which is open when the pump is not running and when the pump is moving slowly, a governor controlled collar, said governor controlled collar being slidably

mounted on the drive shaft of the pump, said relief valve being disposed adjacent said drive shaft, a lever connection between the governor controlled collar and the

relief valve, and forming means whereby when the drive shaft rotates sufficiently to actuate the governor said relief valve will be closed.

1,461,380. PEDAL-CARRIED CIRCUIT MAKER AND BREAKER. CLAUDE F. COLE, Athens, Pa. Filed June 29, 1922. Serial No. 571,770. 3 Claims. (Cl. 200—59.)

3. A pedal carried circuit maker and breaker said circuit maker and breaker comprising a stationary plate carried by the pedal, a loosely pivoted movable plate carried by the stationary plate, springs cooperating with the opposite sides of the pivoted plate for maintaining the same normally in registration with the stationary plate, means for limiting the pivotal action of the pivoted plate, means for normally forcing said plates apart at one end thereof, and contact members carried by the plates adjacent the ends which are forced apart.

1,461,381. DAMPING DEVICE FOR INSTRUMENTS. FARNUM F. DORSEY, Rochester, N. Y., assignor to North East Electric Company, Rochester, N. Y., a Corporation of New York. Filed Nov. 19, 1921. Serial No. 516,431. 4 Claims. (Cl. 264—13.)

1. The combination, with the rotary indicator of a speedometer or the like, and a stationary surface ad-

jacent thereto, of a damping device comprising a frictional drag connected with and moved by the indicator but sliding upon and supported by said stationary surface.

1,461,382. DISPATCH HOLDER. JOHN H. DOUB, Walnut, Kans. Filed Oct. 24, 1922. Serial No. 596,695. 3 Claims. (Cl. 258—3.)

1. A dispatch holder including a handle portion, integral resilient gripping fingers formed at one end of the handle portion, a hoop member having its arms secured to the handle portion, and said fingers having their outer ends curved outwardly.

1,461,383. CAP FOR GREASE CUPS. WILLIAM H. DURANT, Somerville, Mass. Filed Oct. 3, 1921. Serial No. 504,838. 4 Claims. (Cl. 184—48.)

1. In a grease cup, the combination with a member having a grease-receiving chamber and a screw-threaded opening leading thereto and also an interior bead or rib beyond the screw thread, of a cap screw-threaded into said opening and having means to limit its inward screw-threaded movement, said cap having at its inner end an extension provided with an exterior bead, one of said beads being made expansible and contractible radially and said beads having such a position relative to each

other and to the screw threads that they come into engagement and are forced past each other while the screw threads of the cap are in screw-threaded engagement with said member and just before the cap reaches the inward limit of its screw-threaded movement.

1,461,384. HEEL-BUILDING MACHINE. ARTHUR S. EVERETT, Lawrence, Mass., assignor to Page Machine Co., Inc., Haverhill, Mass., a Corporation of Massachusetts. Filed Jan. 27, 1917, Serial No. 144,883. Renewed Apr. 2, 1921. Serial No. 458,086. 18 Claims. (Cl. 12—50.)

1. In a heel building machine, a heel press, a heel form reciprocally movable between a lift-assembling position and a position in which it delivers an assembled heel to said press and having a forming member movable to permit disengagement thereof from the heel as it is withdrawn from said press, means to lock said member in forming position while the form is in said lift-assembling position, and means to unlock said member when the form is moved from said position to permit disengagement of the form from the heel while held by said press.

1,461,385. FLUID-CONDUIT COUPLING DEVICE. ABRAM E. FALOR, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Apr. 1, 1920. Serial No. 370,547. 4 Claims. (Cl. 285—161.)

1. A fluid-conduit coupling member provided with a through fluid passage and having an externally conical portion adapted to interfit with a complemental coupling member, said portion being formed with an annular gasket-holding recess relatively shallow at its margin of greater circumference and relatively deeper at a portion of smaller circumference, and an annular soft gasket of tapered section occupying said recess.

1,461,386. BRAKE-LINING DRESSING. WILLIAM B. FALOR, Akron, Ohio. Filed Oct. 10, 1921. Serial No. 506,929. 4 Claims. (Cl. 134—13.)

2. A dressing for brake lining and the like consisting of petroleum oil, resin and fuller's earth, substantially as described.

1,461,387. AUTOMATIC PISTOL AND OTHER SMALL ARM. JOHN WILLIAM FEARN, Birmingham, England. Filed Jan. 13, 1922. Serial No. 529,023. 2 Claims. (Cl. 42—70.)

1. A striker-locking safety comprising a rotatable element which is mounted in the part that carries the striker and is provided with a cam piece engaging a recess in the said striker: the arrangement being such that when the safety element is rotated from the "off" to the "on" position, it first projects the striker beyond the reach of the hammer and then positively locks the same against movement in either direction; the striker spring being compressed during the projection so that it operates to automatically restore the striker to its normal position when the safety is taken off.

1,461,388. DRAG-SAW. FRANK FOX, Chesaw, Wash. Filed Aug. 24, 1921. Serial No. 495,016. 2 Claims. (Cl. 143—163.)

1. In a drag saw, the combination of a body bar, a head mounted upon one end thereof and provided with an arcuate slot, an anchoring plate pivotally connected to the head for adjustment laterally with respect to the bar, means carried by the plate to extend through said slot securing the plate in adjusted position, and a saw blade carried by the bar for movement longitudinally thereof.

1,461,389. AIR-DISPENSING DEVICE. CLAUD B. FRY, Yates Center, Kans. Filed Mar. 8, 1922. Serial No. 542,197. 6 Claims. (Cl. 221—73.5.)

1. An air dispensing device, said device comprising a dome, upper and lower chambers in said dome, a diaphragm interposed between the chambers, means for supplying air pressure to one of said chambers at a predetermined pressure, means whereby air will be supplied to the other chamber at an equal pressure, said means being controlled by the diaphragm.

1,461,390. WINDOW-SHADE CONTAINER. GEORGE W. GRIGG, Portland, Oreg. Filed July 8, 1920. Serial No. 394,638. 1 Claim. (Cl. 156—23.)

A shade casing comprising an elongated rectangular shaped casing adapted to be disposed over a shade, the front side of said casing being removable, the ends of the casing extending beyond the front side thereof and provided with notches, said front side of the casing having threaded bolts longitudinally adjustable thereon adjacent its ends, said bolts being received in said notches and nuts threaded on said threaded bolts and engaging the outer faces of the ends of said casing, the upper and lower sides of the casing being also removable, thereby allowing access to the curtain from above or below the casing.

1,461,391. SHOCK ABSORBER. AUGUSTUS E. GUERTIN, Belmont, Mass. Filed Apr. 18, 1922. Serial No. 554,838. 3 Claims. (Cl. 188—89.)

1. In a shock absorber of the class described, a stationary receptacle having a stud fast therewith; a revoluble member, the main body of which is enclosed in said receptacle, said member having an internally threaded bore; a travelling partition slidably mounted on said

stud in said bore, having threads on the periphery thereof adapted to engage said internally threaded bore; a chamber on each side of said partition; a by pass in said stud adapted to communicate with said chambers; means to fill said chambers; a lever fast with said revoluble member; a link pivoted to said lever at one of its ends; and an anchor member to which the other end of said link is pivoted.

1,461,392. COMBINATION TOOL. OLE INGSTEAD, Lowell, Mass. Filed Nov. 4, 1921. Serial No. 512,881. 2 Claims. (Cl. 33—102.)

1. A combination tool comprising a pair of pivoted arms each being provided with a longitudinally extending slot, articulator means extending through the slots for pivotally connecting the arms, a slide associated with one arm and including a pair of plates each having a rib mounted in the slot of its respective arm, a set screw for associating the plates with the arm, and each plate being equipped with a right angular extension which is disposed flush with a longitudinal edge of the arm with which it is associated.

1,461,393. APPARATUS FOR DRYING LUMBER. RICHARD F. JENKINSON, Tuscaloosa, Ala., assignor of one-half to James S. Free, Tuscaloosa, Ala. Filed Oct. 16, 1922. Serial No. 594,799. 3 Claims. (Cl. 34—19.)

1. A drying kiln, comprising a drying room, heating means arranged in the room in position to direct its heating medium substantially upon all sides of the lumber, said means including nozzle pipes, certain of said pipes being free to swing laterally to facilitate introduction into and removal of lumber from the room.

1,461,394. GASEOUS-FUEL BURNER. BONIFACE R. KLOEB and JOSEPH A. KLOEB, Hoboken, N. J. Filed Aug. 14, 1922. Serial No. 581,810. 5 Claims. (Cl. 158—61.)

1. A gaseous fuel-burning device including a hollow burner having a depending flue portion, a superheater

tube arranged within the hollow burner, a hollow ring-like generator surrounding said depending flue, a vapor-

ized fuel feed pipe communicating with the generator and having a jet orifice disposed in discharging relation to one end of the superheater tube.

1,461,395. COMBINED READING GUIDE, PAPER CUTTER, AND BOOK MARK. OTTO J. KRAEMER, Portland, Oreg. Filed Nov. 8, 1921. Serial No. 513,856. 2 Claims. (Cl. 120—1.)

1. In a device of the kind specified, the combination with a handle, of a straight-edge in the same plane with the handle and disposed substantially at right angles to the longitudinal axis of the handle, and a member projecting from the surface of the handle, substantially at right angles thereto, to constitute a thumb-piece or stop.

1,461,396. POTATO-PLANTING MACHINE. HAAKON SIGVART LARSEN, Christiania, Norway. Filed June 5, 1922. Serial No. 566,044. 3 Claims. (Cl. 221—135.)

1. In a potato planting machine a rotating wheel, a stationary cylindrical receptacle for potatoes mounted co-axially within the said wheel, radial potato feeding channels in the said wheel, an outlet opening for potatoes in the bottom of the receptacle, said radial channels registering successively with said outlet opening during the rotation of the wheel, so as to receive potatoes from the receptacle.

1,461,397. WALL PAPER. WILLIAM A. LORENZ, Hartford, Conn., assignor to The Otaka Fabric Company, Hartford, Conn., a Corporation of Connecticut. Filed Jan. 4, 1921. Serial No. 434,940. 3 Claims. (Cl. 92—69.)

1. A longitudinally stretchable wall paper having designs printed thereon and capable of being stretched to cause the designs on one strip to match those on an adjoining strip, said paper being transversely crinkled or corrugated to permit the necessary stretching.

1,461,398. WINDSHIELD VISOR. JOSEPH B. McMULLEN, Catonsville, Md., assignor to Acme Motor Shield Corporation, Baltimore, Md., a Corporation of Delaware. Filed Feb. 7, 1921. Serial No. 442,906. 13 Claims. (Cl. 296—95.)

13. A windshield visor and supporting means therefor comprising, in combination, a visor, supporting arms attached to the ends of said visor in fixed relation to the length thereof, clamping means adapted to be secured upon the supports of a windshield and supporting each arm, the means for attaching the visor to the arms and the mounting of the arms upon the clamping means being such that the latter may be secured upon windshield supports of varying spacing.

1,461,399. COMBINATION BILLING SYSTEM. ROY V. NEWSHAM, Oakland, Calif. Filed June 29, 1922. Serial No. 571,594. 1 Claim. (Cl. 282—27.)

A combination bill system comprising in combination, a bill sheet adapted to be folded and written upon to leave an original and two carbon copies of a business

be mounted on the cradle of the piece of artillery and acting upon the said regulating element, the said cam having the same length as the recoil stroke of the cannon, a bevel gear mounted on the axle of the said cam, a toothed quadrant secured to the carriage of the piece of artillery, and gear wheels connecting the said quadrant with the said bevel gear, the said quadrant having a non-toothed portion whereby the same shall be prevented from acting except after a stated value of the aiming angle is reached, the non-toothed portion having a greater radius than that of the bottom of the teeth.

1,461,404. AUTOMATIC VALVE. PEDRO ROTH, Buenos Aires, Argentina. Filed July 15, 1922. Serial No. 575,389. 1 Claim. (Cl. 137—53.)

An automatic hydraulic valve for tanks and the like containing liquids of easy evaporation such as crude oils, naphtha, alcohols and the like, consisting of a tube communicating at its lower end with a storage tank and having its upper end enclosed within a chamber, and a second tube which effects communication of said chamber with a second outer chamber which has an opening to the atmosphere and is adapted to contain a liquid up to at least the level of the lower opening of the said second tube, the bottom of the first named chamber having an opening of reduced cross sectional area communicating with the second named chamber, substantially as described.

1,461,405. SPARK PLUG. JOSEPH SIMON SOLOMON, Evansville, Ind. Filed Dec. 16, 1920. Serial No. 431,134. 2 Claims. (Cl. 123—169.)

1. A spark plug comprising a metallic sleeve, having an annular shoulder extending inwardly from the inner wall thereof at an appreciable distance from the lower end, a tube of insulating material embraced by the portion of the sleeve located above the said shoulder and having the lower portion thereof spaced from the confronting portion of the inner wall of the metallic sleeve in such manner as to provide an annular air gap extending for an appreciable distance from the lower end of the metallic sleeve, said tube being of sufficient length to depend below the lower end of the sleeve, a stem ex-

tending through the tube, means at the upper end of the stem for sustaining the stem within the tube, a main electrode secured to the lower end of the stem, and a plurality of auxiliary electrodes seated within the periphery of the depending end of the tube, the auxiliary electrodes being spaced apart from one another and from the main electrodes by integral portions of the insulating tube, with the uppermost auxiliary electrode arranged in spaced relation to the lower end of said sleeve to provide a spark gap and with the peripheral face of each auxiliary electrode flush with the peripheral faces of the adjacent portions of the insulating tube.

1,461,406. COMBINED COASTER AND CHAIR. TILDEN J. STONE, Lenoir, N. C. Filed Oct. 2, 1922. Serial No. 591,934. 4 Claims. (Cl. 208—165.)

1. In a combined coaster and chair, a rigid member including a coaster seat, a wheel supported element connected to the member, means for guiding the wheel, a chair seat, means for hingedly connecting the chair seat to the under side of the said member, and a wheel supported member connected to the said seat.

1,461,407. CARD INDEX. SILAS EDGAR TROUT, Philadelphia, Pa. Filed July 27, 1922. Serial No. 577,882. 1 Claim. (Cl. 129—16.)

A card index comprising a carrying frame having flanged portions constituting a bearing and support for card-carrying strips; a strip having ends adapted to be disposed under the flanged portions of the frame; bales disposed on said strip and constituting bearings for a card-carrying member; a card-carrying member mounted on said bales, said member having portions extending in spaced relation to the body thereof; a card-carrying clip adapted to pivotally bear on a portion of the card-carrying member; and a card-carrying support adapted to be attached to the clip.

1,461,408. SPRING WHEEL. GEORGE WILBER WATTS, Hot Springs, Ark. Filed Nov. 9, 1922. Serial No. 599,914. 4 Claims. (Cl. 152—28.)

1. In a spring wheel, a hub, a body portion secured thereto, a felly, a ring carrier, means for securing the

ring carrier to the felly, a plurality of springs interposed between the ring carrier and the felly, each of said springs including a main U-shaped member, and a small U-shaped member arranged at each side of the main U-shaped member, the legs of the main U-shaped member being connected with one leg of each small U-shaped member, the other legs of the small U-shaped

members being extended and being curved to constitute attaching ends and being disposed flush against the ring carrier, means for fastening the curved body portion of each main U-shaped member to the body portion of the wheel, and a common means for securing the adjacent attaching ends of the springs to the ring carrier.

1,461,409. STEEL FORM FOR CONCRETE CONSTRUCTION. HERBERT E. WHITE, Youngstown, Ohio, assignor to Trucson Steel Company, Youngstown, Ohio, a Corporation of Michigan. Filed Aug. 15, 1921. Serial No. 492,268. 8 Claims. (Cl. 25—131.5.)

4. Forms for concrete construction including a base plate adapted to be supported below the beam, a hanger member having adjustable suspension upon an edge portion of the base plate, and a form supported by said hanger.

1,461,410. NUT-SHELLING MACHINE. JAMES H. ALDRICH, Oakland, Calif. Filed Sept. 20, 1921. Serial No. 501,994. 13 Claims. (Cl. 146—3.)

1. A nut shelling machine comprising a stationary member upon which a nut is adapted to be supported on an end, and means exerting a gradually increasing pressure against substantially opposed points at the middle portion of the sides of the nut.

1,461,411. TRAPDOOR FOR STORAGE AND DELIVERY APPARATUS. LOUIS CHARLIER, Jemeppe-sur-Meuse, Belgium. Filed June 27, 1921. Serial No. 480,879. 2 Claims. (Cl. 221—144.)

1. A closure device comprising, a pivoted closure hood, a counterweight normally biasing the hood to closed position, a motor for moving the hood to open position, and a beam carrying said counterweight and operatively connecting the hood and the motor.

1,461,412. TRAILER COUPLING. CHARLES G. CLEMENT, Edgerton, Wis., assignor to Highway Trailer Company, Edgerton, Wis., a Corporation of Wisconsin. Filed Oct. 22, 1919. Serial No. 332,863. 3 Claims. (Cl. 280—33.15.)

1. The combination of a draft member having a transverse bore; a coupling head having spaced walls to receive said draft member with apertures positioned to register with said bore and a coupling pin adapted to occupy said apertures and the bore of the draft member, said coupling head having an apertured rib exteriorly formed adjacent the aperture of one wall, the coupling pin having a pair of ribs positioned to extend at opposite

sides of said rib on the head, all three ribs having apertures arranged to register when the coupling pin is in operative position, and a spring-pressed plunger carried by the coupling pin in position to penetrate said registered apertures for removably locking the pin in position.

1,461,413. CONCRETE-BLOCK MACHINE. ROBERT S. COHOON, Orlando, Fla., assignor to Southern Cement Machine Company, Orlando, Fla., a Corporation of Florida. Filed Mar. 18, 1922. Serial No. 544,711. 7 Claims. (Cl. 25—41.)

1. A concrete block machine comprising a mold having movable sides; cams on said sides; and adjustable cams adapted to engage the first-mentioned cams for locking the movable block sides against spreading.

1,461,414. MACHINE FOR MAKING BOXES. ARTHUR V. COSTER, London, England, assignor to The Diamond Match Company, Chicago, Ill., a Corporation of Illinois. Filed June 17, 1922. Serial No. 568,898. 7 Claims. (Cl. 93—47.)

1. In a machine for making box trays from blanks, each blank comprising a bottom portion having end and side extensions and corner pieces, the combination with means for folding a blank into tray form with the corner pieces within the folds of the adjacent extensions, of means for punching inwardly projecting tongues from the blank in position to fasten the folded extensions against the corner pieces.

1,461,415. CARTON. FRANK B. DAVIDSON, Marseilles, Ill., assignor to National Biscuit Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 28, 1922. Serial No. 532,509. 8 Claims. (Cl. 229—35.)

1. A carton having a bottom wall, and upright front, rear, and side walls foldably connected with said bottom wall, two opposite of said upright walls having end flaps overlapping the other of said upright walls on the outside thereof, said flaps having their ends meeting and terminating short of the upright walls toward which they extend, said flaps having means at their meeting ends for interlocking the flaps together and holding all portions

of the flaps along their meeting ends, including their upper and lower edges, in the plane of said flaps, said locking means being engaged and disengaged without bending said flaps by moving the flaps relatively to each other in the plane of the same.

1,461,416. APPARATUS FOR THE MANUFACTURE OF GLASSWARE. PHILLIP EBELING, Bellaire, Ohio. Filed Sept. 9, 1921. Serial No. 499,484. 21 Claims. (Cl. 49—1.)

10. The combination with a glass melting tank, of an intermittently actuated carrier, molds borne by said carrier, automatic means for flowing glass from said tank, shearing mechanism arranged to sever charges from the flow for deposit in the molds, means cooperating with said molds for pressing said charges into ware form, valves in the bottoms of said molds, means whereby said valves are raised for elevating the ware within the molds, and means for reheating the ware while the latter occupies elevated position, said reheating means embodying openings through which heat from the tank is directed upon the ware.

1,461,417. COIN-CONTROLLED VENDING MACHINE. HARVEY GILES, Brooklyn, N. Y. Filed Mar. 20, 1920. Serial No. 367,534. 4 Claims. (Cl. 211—8.)

1. In a coin-controlled vending machine, an exterior casing having a coin-entrance-slot and a discharge opening for sold merchandise, and a vertical tray mounted within said casing adapted to hold a stack of pieces of merchandise and permit the discharge of said pieces one at a time in a lateral direction from the lower end of said tray into said opening, in combination, a horizontally slidable goods ejector at the lower end of said tray and

adapted to be slid against the lower piece of merchandise therein and move the same into said opening, a vertically slidable shutter normally closing said opening, an exposed operating handle capable of movement on the introduction of a coin into the machine, means including a sliding plate intermediate said handle and said shutter for operating therefrom said shutter, means intermediate said plate and said goods ejector for actuating therefrom said ejector, a spring for automatically restoring said ejector, shutter and handle to their respective normal positions, and a supplemental spring secured at one end to said plate and at its other end to said ejector operating means at a part thereof having a free bearing against said plate and normally acting under its initial tension to ensure the movement of said ejector operating means with said plate, said spring being adapted on a given resistance to the movement of the ejector and the continuance in movement of said plate to become extended and on the opening of said shutter to expend its stored up force against the said ejector whereby to exert a sudden impetus against the piece of merchandise then in process of being discharged.

1,461,418. FOCUSING FINDER FOR LANTERNS. CLINTON O. HARRINGTON, Chicago, Ill., assignor to Aldobilt Company, Chicago, Ill., a Corporation of Illinois. Filed June 2, 1921. Serial No. 474,543. 10 Claims. (Cl. 88—14.)

1. In a finder of the character described adapted to be positioned closely adjacent to a source of light to indicate relative positions of such source, the combination of a relatively small chart having markings associated therewith adapted to indicate relative locations of relatively small light spots thereon, and means for projecting upon the chart two relatively small shafts of light from a given relatively small source, with said shafts issuing from such source with a materially large angle between them, for defining two relatively small spots of light on the chart for indicating a relative position of the source of light.

1,461,419. TYPEWRITING MACHINE. JOSEPH B. HOLDEN, Syracuse, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Sept. 14, 1922. Serial No. 588,141. 11 Claims. (Cl. 197—161.)

1. In a ribbon reversing mechanism for typewriting and like machines, the combination of a longitudinally shiftable ribbon reversing shaft and detent mechanism therefor comprising a circumferential cam on said shaft, sliding detents arranged on opposite sides of said shaft and co-operative with said cam, and a yoke shaped floating spring coacting at its ends with said detents and forcing them towards each other and towards the axis of said shaft.

1,461,420. ADJUSTING MECHANISM ADAPTED FOR LINE CONTROL. LUDWIG HOLLAND-LETZ, Oak Park, Ill. Filed Jan. 29, 1921. Serial No. 440,835. 17 Claims. (Cl. 74—54.)

11. In a tractor, the combination with an engine, of a throttle valve controlling the speed thereof, a reciprocating element connected to said valve, a flexible member, and connections between said flexible member and reciprocating element whereby by repeatedly pulling the flexible member the throttle valve may be opened and closed to any desired extent.

1,461,421. DRAWING INSTRUMENT. GEORGE J. HOOD, Lawrence, Kans. Filed Jan. 30, 1919. Serial No. 274,057. 15 Claims. (Cl. 33—27.)

1. A drafting compass comprising a post having a pointed end and a body portion adapted to be grasped by the hand for rotating the same, a beam attached medially to said post at right angles thereto, an extended slide resiliently clamping against the sides of said beam, but freely slidable and laterally immovable thereon, and a marking instrument on said slide.

1,461,422. WATER TURBINE. THOMAS J. JOLLY and WILLIAM F. FITZPATRICK, Ulysses, Nebr. Filed May 2, 1922. Serial No. 557,893. 1 Claim. (Cl. 253—16.5.)

In a water turbine, a vertical casing having the upper end formed to provide a water inlet and the lower end formed to provide a water outlet, a vertical shaft in said casing at the center thereof, a water wheel fixed upon said shaft adjacent to the lower extremity thereof and comprising a hub and blades radiating from the hub and pitched in a direction to rotate the wheel in one direction, a second water wheel loosely mounted upon said shaft above the first named water wheel and

comprising a hub and blades radiating from the hub and pitched in a direction reverse to the direction of the blades of the first water wheel, whereby the second named water wheel may be rotated in a direction opposite to that of the first named water wheel, a sleeve loosely surrounding said shaft, a connection between the lower end of said sleeve and the second mentioned water wheel, a power shaft, driving connections between said power shaft and the first mentioned shaft and said sleeve, a valve mechanism for regulating and controlling the flow of water to said water wheels, said valve mechanism comprising a stationary plate formed with radial slots and a movable plate mounted upon said stationary plate and formed with radial slots adapted to be moved

into and out of registration with the slots in said stationary plate including a rack on the upper surface of the latter and a horizontal operating shaft extending through the casing and having a pinion on its inner end meshing with said rack, mechanism for adjusting said movable plate, a flanged ring secured to the inner surface of said casing and acting to support the outer margin of said stationary plate; and a cone-shaped member integral with the central portion of said stationary plate and surrounding said first mentioned shaft and formed with a peripheral groove at the lower larger end thereof to receive the inner edge of said movable plate.

1,461,423. HUMIDIFIER FOR HOT-AIR FURNACES. RICHARD E. KELM, Milwaukee, Wis. Filed Mar. 21, 1922. Serial No. 545,106. 2 Claims. (Cl. 126-113.)

2. The combination of a trough containing water, a cylindrical housing carried by the outer wall of the

trough, a fire pot, an ash pit, a bottom for said ash pit carried by the upper part of the inner wall of said trough, said bottom having dead air space below to prevent the absorption of heat beneath said ash pit.

1,461,424. LIQUID-MEASURING MACHINE. WENZEL W. LEINERT, New York, N. Y. Filed Nov. 12, 1921. Serial No. 514,637. 4 Claims. (Cl. 249-1.)

1. A liquid measuring machine comprising a tilting tank having an outlet therein, a valve to close the outlet, a float to raise the valve, means for holding the float submerged, and a tripping device operated by the tilting of the tank to release the holding means.

1,461,425. PAPER-CUTTING MACHINE. EDWARD R. LINEBAUGH, Barberton, Ohio, assignor to The Diamond Match Company, Chicago, Ill., a Corporation of Illinois. Filed June 15, 1921. Serial No. 477,618. 3 Claims. (Cl. 164-59.)

1. In a paper cutting machine having a knife, an adjustable back gage, means for adjusting said gage in relation to the knife, and a graduated measuring tape movable concurrently with said gage, two index members supported independently of and arranged in close relation to the tape so as to overlie the advancing graduations of the tape, and means whereby adjustment of said members in spaced parallel relation to each other can be effected.

1,461,426. APPARATUS FOR BUILDING CONSTRUCTION. MARYAN L. LISOWSKI, Cranford, N. J. Filed Sept. 8, 1919. Serial No. 322,453. 5 Claims. (Cl. 25-131.5.)

5. Apparatus for use in constructing frame-work for cement buildings comprising a plurality of telescopic stanchions; means for adjusting the sections of the

stanchions relatively to vary the length of the latter; means at the bottom of the stanchions for supporting and holding the same from slipping; means at the top of the stanchions for connecting the same in pairs, said means including a U-shaped support made up of a plurality of sections and means for adjusting the sections

relatively to vary the distance between the tops of the stanchions; bracing means rigidly connecting the stanchions between their ends; and means for adjusting the length of the bracing means correspondingly with the width of the top connecting means.

1,461,427. SNAP-FASTENER CLAMP FOR SEWING MACHINES. MICHAEL McCANN, Glenmorris, N. Y., assignor to Frederick Osann Company, New York, N. Y., a Corporation of New York. Filed July 15, 1919. Serial No. 311,006. 2 Claims. (Cl. 112-114.)

2. In a sewing machine a clamp holding lever having a clamping finger at its end, in combination with a positioning finger secured on the lower side of the clamping finger formed with a slotted end having shoulders to position a fastener and inwardly extending ledges to support its edges, said fingers being pressed toward each other by resilient means, resilient means pressing the clamp holding lever toward the cloth, means for elevating said lever and the fingers carried by it at will, and means actuated by the raising of said lever to press apart the fingers.

1,461,428. SEWING MACHINE. MICHAEL McCANN, Glenmorris, N. Y., assignor to Frederick Osann Company, New York, N. Y., a Corporation of New York. Filed Sept. 23, 1919. Serial No. 325,710. 17 Claims. (Cl. 112-73.)

1. In a sewing machine having a laterally movable needle bar and coating stitch forming mechanism, the combination therewith of cam controlled mechanism for regulating the lateral movements of the stitch-forming mechanism so that it will in connection with the cloth feeding mechanism periodically form stitches in an intermediate straight line and in zig zag lines, a cloth

clamp and cam controlled mechanism for moving said cloth clamp in one direction while the stitch forming

devices are in position to form a straight line of stitches and in reverse direction while the stitch forming devices are in position to form zig zag stitches.

1,461,429. ELECTRIC COMBINATION SWITCH FOR AUTOMOBILES. WILLIAM B. MARKS, Waterbury, Conn. Filed Jan. 18, 1922. Serial No. 530,158. 21 Claims. (Cl. 200-43.)

1. In a combination electric switch, a casing, a pair of terminals in said casing, a series of conductive springs between said terminals, and a series of reversible plungers loosely carried in said casing between said springs for electrically connecting said springs to each other and to the terminals for closing the circuit through said switch, said springs serving to guide said plungers.

1,461,430. SINGLETREE. JAMES W. MONTGOMERY, Thomasville, Ga. Filed June 7, 1922. Serial No. 560,520. 1 Claim. (Cl. 278-115.)

A single-tree formed of a bent metal plate having trace hooks mounted at its ends and having at its center a swivel lug mounted rigidly in the bend of the plate, a horizontal swivel pin mounted to turn in the front end of said lug, the forward end of said pin being flattened and provided with an eye, a pair of lapper hooks having their ends flattened in a plane at right angles to the plane of the hook and perforated, and a pivot bolt connecting said hook ends to the end of the swivel pin.

- 1,461,431. AUTOMOBILE BUMPER. WILLIAM T. MORRIS, Brooklyn, N. Y., assignor to American Chain Company, Inc., a Corporation of New York. Filed Nov. 4, 1922. Serial No. 598,978. 3 Claims. (Cl. 293—55.)

1. A bumper for automobiles comprising two central impact receiving members one extending above and the other below the medial plane of the bumper, and a rear bar curved slightly rearwardly at both ends and then reversely curved to continue parallel with itself, the two ends then continuing diagonally to meet the said rear bar, and means for clamping the several parts together.

- 1,461,432. GAME APPARATUS. CHRIST PAPOUCHIS, Far Rockaway, N. Y. Filed May 7, 1921. Serial No. 467,756. 4 Claims. (Cl. 235—98.)

1. The combination of an indicating device comprising a carrying reel and a plurality of number plates mounted thereon, a drum mounted on the same axis as the carrying reel but independently thereof and having a pawl for engagement with the reel, means to rotate the drum in a forward direction to rotate the reel to its initial position and means to rotate the drum reversely to its initial position.

- 1,461,433. MACHINE FOR MAKING MATCH BOOKS. MICHAEL PARIDON, Barberton, Ohio, assignor to The Diamond Match Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 9, 1922. Serial No. 527,855. 6 Claims. (Cl. 93—2.)

1. In a book-match machine having match-strip cutting mechanism, a plunger, means for reciprocating said

plunger to position match-strips in the cutting path, and a table from which match strips are delivered to the plunger, the combination with said table and plunger, of strip-feeding mechanism comprising an element whereby match-strips are deposited in an orderly manner on said table and then fed successively therefrom to and upon the plunger, and means for actuating said element in cooperative relation to the plunger.

- 1,461,434. MACHINE FOR MAKING MATCH BOOKS. MICHAEL PARIDON, Barberton, Ohio, assignor to The Diamond Match Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 27, 1922. Serial No. 539,560. 5 Claims. (Cl. 93—2.)

1. In a book-match machine, the combination with a support for a pile of match strips, a strip cutting mechanism, a plunger, and means for reciprocating said plunger to eject the lowermost strip or strips from the pile and position such strip or strips in the cutting path, of a strip barrier movable into and from the path of the plunger, said barrier being located above the support and forwardly of the cutting mechanism, and means for raising said barrier at predetermined intervals to provide a throat for the passage of the strip or strips to the cutting path.

- 1,461,435. INDIGOIDIC DYESTUFFS AND PROCESS OF MAKING SAME. HERMANN STAUDINGER, Zurich, HANS VERAGUTH and RICHARD TOBLER, Basel, Switzerland, assignors to Society of Chemical Industry in Basle, Basel, Switzerland. Filed Nov. 11, 1922. Serial No. 600,405. 16 Claims. (Cl. 260—48.)

16. As new products, the hereinbefore described vat dyestuffs from beta-thionaphthisatine and a complex composed of a heterocyclic five atom annulus as carrier of a methylene group capable of reacting and condensed with an aromatic radical which may carry still further substituents, which constitute dark powders soluble in sulfuric acid of 98 per cent with brown-violet to blue-green coloration, dyeing wool and cotton in the hydrosulfite vat liquor of fast red to brown tints and having a constitution characterized by the following atom grouping with two symmetrical members

the first member of which is coupled to the 1-position and to the sulfur atom of the beta-thionaphthol radical, whilst the second member belongs to a heterocyclic five atom annulus, condensed with an aromatic radical, which may carry still further substituents, said dyestuffs being in the form of halogen compounds.

1,461,436. OIL CAP. FERDIE ARRIGONI, New York, N. Y. Filed July 12, 1922. Serial No. 574,487. 1 Claim. (Cl. 220—86.)

In an oil cap, an elongated tube, an outwardly flared flange carried thereby at one end thereof, a spring resisted cover for said tube at the flared end thereof, spring clips carried by the tube to engage an oil spout, said tube being split at one end to provide yieldable tongues.

1,461,437. PENCIL. OBED C. BILLMAN, Cleveland, Ohio, assignor of one-half to Harvey H. Troxel, Wooster, Ohio. Filed July 28, 1919. Serial No. 313,791. 21 Claims. (Cl. 120—18.)

1. In a propeller pencil, a tubular pencil body provided at its top with an annular beading, a tubular propeller member rotatable in said pencil body, an eraser in said propeller member, a finger cap protecting said eraser and detachably connected to said propeller member, and means for detachably and rotatably securing said cap and propeller member to said annular beading of said pencil body.

1,461,438. ADJUSTABLE HEAD FOR PIPES. CHARLES M. BULLER, Milwaukee, Wis., assignor to L. J. Mueller Furnace Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed May 12, 1921. Serial No. 468,942. 5 Claims. (Cl. 137—75.)

1. An adjustable head for pipes, comprising a rectangular casing having double walls with a side open-

ing and an opening at one end, and an angular U-shaped member slidably adjustably connected to and extending

between the double walls of the side portion of the casing provided with the side opening for adjusting the width of the side opening.

1,461,439. CHECK VALVE. WALDO W. BURGIN, Lodi, Calif. Filed Apr. 12, 1921. Serial No. 460,707. 1 Claim. (Cl. 251—167.)

A check valve including a tubular body, a closure member for the body, and a ring removably fitted into one end of the body, the inner peripheral edges of the ring being adapted to either at a time form a seat for said closure member the body-bore being provided with longitudinal slots extending to the ring from the opposite end of the body.

1,461,440. CORNER JOINT FOR FRAMES. LORENZO R. CENTERBAR, Fitchburg, Mass. Filed Feb. 17, 1922. Serial No. 537,816. 4 Claims. (Cl. 20—92.)

1. As an article of manufacture, a frame comprising a vertical member having a groove along the outer surface thereof and a horizontal member, said members having a mitre joint between them and being glued together along the same, and being provided with a continuous slit of triangular form extending from the bottom of the groove in the upright member, to the outer surface of the horizontal member, and being provided with a strengthening piece of metal extending through said slit and having flanges engaging the outer surface of the horizontal member and the bottom of said groove.

- 1,461,441. WINDOW SCREEN. AMY E. DAVIS, New York, N. Y. Filed Jan. 29, 1920. Serial No. 354,953. 4 Claims. (Cl. 156—14.)

3. A frame with hooks, a screening means with a hem at its edges, a drawing string passing through the hem and having exposed portions passing over the hooks so as to hold the screening means in place, and said frame comprising means for permitting it to expand.

- 1,461,442. GARMENT HANGER. ISADORE DUBERSTEIN, Los Angeles, Calif. Filed Sept. 21, 1922. Serial No. 589,663. 10 Claims. (Cl. 211—13.)

1. In combination, a garment hanger embodying a garment supporting bar, and an elastic sleeve adapted to be freely adjusted upon the bar within the confines of the ends of the bar, the internal diameter of the sleeve being less than the external diameter of the bar, said sleeve serving to support and retain the garment upon one end of the hanger when the garment has become detached from the other end of the hanger.

- 1,461,443. GRATE CONSTRUCTION. SAMUEL N. FLEMING, Earlinton, Ky. Filed May 25, 1918. Serial No. 236,604. 3 Claims. (Cl. 126—164.)

2. A fire place grate comprising a forward basket portion and transverse rocking bars rearwardly thereof

having major rearwardly extending fire supporting parts, and means to rock the bars alternately whereby fire will be moved forwardly into the basket portion.

- 1,461,444. MAGNESIA REFRACTORY. WALLACE W. GREENWOOD, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Feb. 28, 1919. Serial No. 279,881. 8 Claims (Cl. 106—11.)

1. A composition of matter comprising preshrunk magnesia grains forming the major portion of the total mass and a ceramic bond proportioned and constituted to unite the grains into a super-refractory body which will withstand drying and firing without detrimental shrinkage.

- 1,461,445. COMPOSITION FOR SATURATING FABRICS AND PROCESS OF MAKING SAME. LESTER KIRSCHBRAUN, Chicago, Ill. Filed Oct. 5, 1921. Serial No. 505,653. 4 Claims. (Cl. 134—1.)

2. A process of making an emulsion, consisting in mixing colloidal clay, and water, adding thereto a bitumen while the latter is in heated liquid condition so as to form an emulsion, then adding thereto a hydrocarbon oil substantially liquid at normal temperatures, the two hydrocarbon constituents forming the internal and the water the external phase of the emulsion.

- 1,461,446. COMMUTATING SYSTEM FOR ELECTRICAL MACHINES. CHARLES LÉONARD ARMAND MAURICE LEBLANC, Paris, France, assignor to Société Anonyme pour l'Exploitation des Procédés Maurice Leblanc-Vickers, Paris, France. Filed Sept. 15, 1920. Serial No. 410,534. 5 Claims. (Cl. 171—321.)

1. A commutating device comprising, a commutator cylinder provided with a plurality of commutator segments, a plurality of low resistance brush elements electrically connected together and arranged in circumferential stepped relation with respect to each other for cooperation with said cylinder and each of said brush elements having a resistance in series therewith, alternate segments of said cylinder being connected to the armature windings of the machine and the intermediate segments each being inactive and divided into a plurality of sections which are insulated from each other and from said alternate segments, each of said sections being disposed in the path of one of said brush elements, whereby the individual brush elements are insulated from each other at the commutator, but electrically connected through said resistances.

- 1,461,447. STEAM-EJECTOR APPARATUS. MAURICE LEBLANC, Val-sur-Seine par Croissy, France, assignor to Société Anonyme pour l'Exploitation des Procédés Westinghouse Leblanc, Paris, France. Filed July 31, 1918. Serial No. 247,651. 4 Claims. (Cl. 230—13.)

1. In combination with a main condenser a steam ejector provided with a diffuser the axis of which is a curved line so arranged as to permit the fluid withdrawn to be discharged from the ejector in an oblique direction, an auxiliary condenser of elongated form having its axis parallel and immediately adjacent to that of the ejector,

and directly connected to the said diffuser, a second ejector forming the suction from the auxiliary condenser

and located in the same axial line as the first ejector, with the object of providing a compact unit easy to control and occupying a minimum floor space.

1,461,448. MEANS FOR INDICATING ERROR IN DIRECTION OF ROTATION OF SHAFTS AND OTHER MECHANICAL ROTARY MEMBERS. JAMES MCKECHNIE and WILLIAM FLOYD RABBIDGE, Barrow-in-Furness, England, assignors to Vickers Limited, London, England. Filed Aug. 22, 1921. Serial No. 494,109. 3 Claims. (Cl. 116—21.)

3. In indicating devices for rotary members, a warning bell, a pair of spring clappers adapted to strike the said bell, each clapper having an operating stud, a pair of toothed wheels on the rotary member adapted to operate the clappers through the striking studs, oppositely directed free wheel clutches on which the said toothed wheels are mounted, a distant control member adapted to turn into either one of two positions according to the direction in which the rotary member is to turn, and means provided on the distant control member whereby one or other of the clappers is pressed back out of operative position according to the direction of rotation required for the rotary member.

1,461,449. SCORE-INDICATING DEVICE FOR GAMES. HUGH M. MATHIESON, Glasgow, Scotland. Filed June 22, 1922. Serial No. 570,134. 1 Claim. (Cl. 235—83.)

A score indicating device comprising a figured dial, slotted pointing means rotatably mounted on said dial,

said pointing means comprising resilient arms embracing said dial, said arms hingedly connected at their outer ends and presenting finger grips and a spring compressible by actuation of the finger grips, said spring normally acting to maintain the inner faces of said arms in frictional engagement with said dial.

1,461,450. STOKER FURNACE. HERMAN A. POPPENHUSEN, Hammond, Ind., assignor to Green Engineering Company, East Chicago, Ind., a Corporation of Illinois. Filed Dec. 14, 1921. Serial No. 522,361. 9 Claims. (Cl. 110—40.)

1. In a furnace, the combination of a grate, a plurality of air ducts on opposite sides of said grate and opening beneath the fuel supporting portion of said grate for supplying draft thereto, the ducts at one side of said grate being opposite the corresponding ducts on the other side of said grate, a single conduit beneath said grate and between the ducts at the sides thereof, said conduit being common to all of said ducts for supplying air thereto, a damper for each duct, a plurality of shafts between said ducts, one for each set of opposite ducts, and means connecting each shaft with the dampers of its associated ducts so that the dampers of one set of ducts may be actuated independently of the dampers of any other set.

1,461,451. METHOD OF MAKING CONCRETE PILES. GEORGE G. POWELL, New York, N. Y., assignor of one-half to Ignatius V. McGlone, Jamaica, N. Y. Filed June 7, 1921. Serial No. 475,774. 5 Claims. (Cl. 61—57.)

1. The method of forming a concrete pile consisting in forcing a casing into the soil, removing the soil from the interior of the casing, locating an explosive in the soil below the bottom end of the casing, filling the casing with liquid concrete and exploding said explosive in said soil, said concrete flowing into the cavity formed by the explosive and forming an enlarged footing for the pile.

1,461,452. BUILDING CONSTRUCTION. JOHN A. PRITCHARD, Chicago, Ill., assignor, by mesne assignments, to Structural Gypsum Corporation, New York, N. Y., a Corporation of Delaware. Filed May 27, 1921. Serial No. 473,103. 4 Claims. (Cl. 72—71.)

1. In a building construction, in combination, an end purlin, an anchoring device erected upon said end purlin,

a slab of plastic material supported by said purlin and having an opening into which said anchoring device pro-

jects, and provided with an anchoring member extended into said opening and cooperating with said anchoring device.

1,461,453. WALL-PAPERING DEVICE. STANLEY PYTELAK, McMechen, W. Va. Filed May 13, 1922. Serial No. 560,582. 5 Claims. (Cl. 216-6.)

1. A wall papering apparatus comprising a holder for a roll of paper, a casing having hinged connection with said holder, said casing being divided longitudinally to form a brush compartment and a paste reservoir and having passages permitting paste to pass from said reservoir to said compartment, a rotary paste-applying brush in said compartment, said compartment being open at its top, paper guiding means holding the paper to said brush as it is drawn from said holder across said open top, and a rotary cutting disk whereby a marginal edge is trimmed from the paper as it is drawn from said holder.

1,461,454. TROLLEY. JAMES F. REILLY, Philadelphia, Pa. Filed Dec. 6, 1921. Serial No. 520,269. 16 Claims. (Cl. 212-105.)

1. In apparatus of the character describe, a carriage suspended from and adapted to travel upon an overhead trackway, a controllable cable one end of which is attached to said carriage, said cable extending downward in a loop from said carriage, a pulley block suspended in said loop of said cable, members mounted in the carriage

and adapted to be moved aside by said pulley block and to then return to their normal positions to form a seat for supporting said pulley block in said carriage, means adapted to be encountered and operated by said pulley block when the same passes to a predetermined position in the carriage for moving said supporting members to positions whereby the pulley block may be permitted to pass below the same, and means actuated by the pulley block as the same descends to return said supporting members to their normal operative positions.

1,461,455. TENS-CARRYING DEVICE FOR CALCULATING MACHINES. PAUL REISS, Danzig, Germany, assignor to the Firm Gutschow & Co. G. m. b. H., Danzig, Germany. Filed Apr. 20, 1922. Serial No. 555,713. 17 Claims. (Cl. 235-138.)

15. In a computing machine a tens carrying device comprising rotatable carrying means operatively connected to the numeral wheels of the computing machine, a carrying member movable in two directions and adapted to rotate said carrying means a step both in the one and in the other sense, on being itself shifted only in one of said two directions; means adapted to move said carrying member in the other direction; a locking member adapted to lock said carrying device against movement in one of said two directions; releasing means positively connected to said carrying means and adapted to release said locking member; positioning means adapted to rotate said carrying means and means for actuating said positioning means; said releasing means comprising a releasing member movably mounted on said carrying member and a finger rigidly attached to said carrying means, said finger adapted to engage said releasing member.

1,461,456. AUTOMATIC CUT-OUT. JOY S. REYNOLDS, San Francisco, Calif., assignor of one-half to Charles A. Balcom, San Francisco, Calif. Filed Apr. 26, 1921. Serial No. 464,695. 3 Claims. (Cl. 103-23.)

1. An automatic cut-out, comprising, a reservoir adapted to hold fluid, a continuously rotating shaft projecting

into said reservoir and having a crank therein, a pump in said reservoir having a piston in position to be actuated by said crank on its inner stroke, a spring positioned to actuate said piston against said crank, a pressure chamber, said pump connected to said chamber, and adapted to take fluid from said reservoir and force it into said chamber, a latch adapted to engage said piston and retain it at approximately the inner limit of its stroke, and means, depending on the pressure in said chamber, for actuating said latch in the direction of engagement with said piston, and a spring tending to actuate said latch in the direction of non-engagement with said piston.

1,461,457. GEAR-SHIFT LEVER. PERCY F. RICE, Tus-tin, Calif. Filed June 6, 1921. Serial No. 475,248. 7 Claims. (Cl. 74—39.)

1. In a device of the nature disclosed, the combination with a speed change gearing having a plurality of shift rods carrying gear shifting means, of a universally movable gear-shift lever having a flexible rod operating end, and tension means carried by the lever and functioning to yieldingly maintain the operating end in a normal position relative to the lever.

1,461,458. CONVERTIBLE BABY CARRIAGE. CHARLES O. ROBINSON, Bismarck, N. Dak. Filed Jan. 5, 1920. Serial No. 349,387. 18 Claims. (Cl. 280—31.)

1. A baby carriage having in combination, a body, a running gear comprising wheels and axles, a pair of springs each formed of a substantially continuous piece of material bent to form a closed figure with convex end portions, the bottom of said figure being straight and each of said springs having pairs of spaced means on their upper sides adapted to co-operate with detachable connecting devices on said axles whereby said running gear may be readily removed without removing said body.

1,461,459. GOLF BAG. JOHN E. SCHANK, Chicago, Ill. Filed Aug. 11, 1921. Serial No. 491,335. 9 Claims. (Cl. 150—1.5.)

5. In a golf bag, the combination with a flexible body, of an annular bendable stiffening strip secured around

the outside of the open top of the body, a rigid metallic annulus inside of the top of the body and having an

exposed outwardly extending flange overhanging the stiffening strip, and rivets for securing the body, strip and annulus together.

1,461,460. POWER HAMMER. ROBERT C. SCHROTH, Jr., New York, N. Y., and CLAUDE A. HERMAN, Bridgeport, Conn. Filed June 10, 1920. Serial No. 387,839. 3 Claims. (Cl. 125—34.)

1. A power hammer comprising a crank, a cylinder enclosing said crank and provided with an air passage communicating with the interior through its wall, said cylinder further provided with an enlarged offset portion having a longitudinal bore, a positively driven piston for compressing and expanding the air in said cylinder, a free piston adapted to be operated by the compression and expansion of said air, a tool adapted to be actuated by said free piston, a slide valve arranged in said longitudinal bore and adapted to open and close said air passage, and means for operating said slide valve, said means including a trigger for moving said slide valve to the closing position of said air passage and a spring for moving said slide valve to the open position of said passage.

1,461,461. COMPOSITION-APPLYING DEVICE FOR BOOK-MATCH MACHINES. WILLIAM H. SHOFER, Barberton, Ohio, assignor to The Diamond Match Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 4, 1922. Serial No. 534,258. 3 Claims. (Cl. 91—51.)

1. The combination with a carrier for a succession of separated articles, of a container for ignition material; a wheel mounted to rotate in said container and to transfer the material therefrom to the surface of said articles, said wheel having spaced-apart peripheral projections, a gauge plate adjacent the periphery of the wheel and the path of rotation of said projections, and means for rotating said wheel in synchronism with the travel of the articles whereby the peripheral portions of the wheel between the projections apply the material to the articles and the projections escape the articles.

1,461,462. COUNTERBORING TOOL. JOHN H. SMITH and GEORGE J. KENGEL, Detroit, Mich., assignors to Eclipse Interchangeable Counterbore Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 14, 1921. Serial No. 522,234. 3 Claims. (Cl. 77—58.)

1. In a boring tool, the combination with a cutter and a holder therefor having abutting end faces, of a drive key projecting from said end face of one of said members, having a pair of opposed plane faces substantially parallel to the axis of said member, the other member being formed with a correspondingly shaped socket engaged by said key and having a lesser diametrical extent than said member, of a cylindrical boss projecting from said key and axially engaging the socketed member to relatively center the two members.

1,461,463. STRAIGHTENING PRESS AND METHOD OF USING SAME. JOSEPH H. STALEY, Columbus, Ind. Filed Mar. 1, 1921. Serial No. 448,879. 5 Claims. (Cl. 153—53.)

1. In a shaft straightening machine, means to test a shaft having center holes comprising a gauge, a pair of center pins on which the shaft is mounted and rotated, and means to test the accuracy of the center holes in the shaft comprising additional supports with recesses in which the shaft is placed and rotated said gauge being adjustable to the two positions of the shaft.

2. The combination with a shaft-straightening press, of means to test a shaft having center holes, comprising a rockable shaft, a pair of center pins rockable with said shaft on which pins the shaft to be tested is rotated, additional higher shaft supports also rockable with the center supports, and a gauge mounted on the rockable shaft and adjustable in its distance from the latter to reach the shaft undergoing test when held by the center pins or on the higher supports.

4. The herein described method for testing the accuracy of center holes in a cylindrical member, compris-

ing the positioning of said member between peripheral supports, gauging the same, positioning said member between supports entering said center holes and again gauging said member, substantially as set forth.

1,461,464. CUT-OFF SLIDE ATTACHMENT. HARRY E. STALTER, Moline, Ill. Filed May 2, 1921. Serial No. 466,185. 3 Claims. (Cl. 29—57.)

1. A device of the class described, comprising a plate adapted for attachment to the head of a turret lathe; a rod supported vertically in said plate; and a rod of smaller diameter than said first-named rod, supported thereby so as to have its free end in proximity to the cutting device of said head.

1,461,465. BOX-ELEVATOR FEEDER. FRED STEBLER, Riverside, Calif., assignor to Stebler-Parker Co., Riverside, Calif., a Corporation of California. Filed Oct. 31, 1921. Serial No. 511,641. 8 Claims. (Cl. 198—34.)

1. In a box feeder, the combination of box-conveying means, means projecting above the box-conveying means to intercept the boxes one at a time when they reach a certain position, and means operating at intervals to raise the box above the projecting means to free the box therefrom.

1,461,466. CABLE END AND HOUSING AND METHOD OF ASSEMBLING THE SAME. GEORGE W. STOUT, Merchantville, N. J. Filed Aug. 20, 1921. Serial No. 493,998. 6 Claims. (Cl. 24—123.)

1. A cable head, composed of a cable, a cup shaped housing having a bottom plate through which said cable passes, the outer end strands of said cable being reversely bent within said housing, inner annular retaining devices wound around the outer end of said cable and positioned between said outer end and the reversely bent strands, outer annular retaining devices wound around said reversely bent strands, a wedge driven into the outer end of said cable, and a sealing medium filling said housing and enclosing said wedge, and said reversely bent, banded cable ends.

1,461,467. WINDOW FASTENER AND ANTIRATTLER. ROBERT STUART, Philadelphia, Pa. Filed Aug. 1, 1922. Serial No. 578,877. 5 Claims. (Cl. 292—75.)

1. A window fastener and anti-rattler, comprising a casing adapted to be secured to the window sash, a

roller adapted to travel on the window jamb, a roller support having a plurality of guides slidable in said

casing, resilient means to cause said roller to draw said sash towards said jamb and a locking member movably carried by said casing.

1,461,468. MIXING AND BEATING MACHINE. HENRY TRUST, Park Ridge, N. J., and FRANK M. ASHLEY, Brooklyn, N. Y.; said Ashley assignor of all his right to Josephine Trust, Park Ridge, N. J.; Josephine Trust administratrix of said Henry Trust, deceased. Filed Dec. 16, 1919. Serial No. 345,344. 4 Claims. (Cl. 259—134.)

1. A beater comprising a body portion having a thread formed in its surface and slots intersecting said threads, a cap adapted to overlie said slots and having threads to engage the threads in the body portion.

1,461,469. CUSHIONED TOE REENFORCE FOR LASTS. RALPH C. WEBSTER, Haverhill, Mass. Filed Mar. 1, 1919. Serial No. 279,980. 5 Claims. (Cl. 12—133.)

1. A wooden last having applied to its bottom a reinforcing piece of material tougher and more tenacious than wood extending lengthwise of the last body and its forward end providing the toe extremity of the last, and a cushion interposed between said piece and the last body.

1,461,470. CARBURETOR. KENNETH A. ACKLEY, Louisville, Ky. Filed May 14, 1921. Serial No. 469,551. 1 Claim. (Cl. 236—18.)

A combined valve and heating coil control thermostat comprising an expansible thermostatic cell, a bracket adjacent said cell and provided with a pair of spaced arms projecting over the cell and having aligned bearings,

a stem on the thermostatic cell extending through these arms, a circuit controlling lever pivoted to said bracket and extending past the stem, a pin on said stem engag-

ing the free end of said lever to move the same, and a valve controlling arm projecting laterally from the upper end of said stem.

1,461,471. WOOD BENDING APPARATUS. FRANK H. BANCROFT, Gardner, Mass., assignor to P. Derby & Co., Inc., Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 27, 1922. Serial No. 556,960. 29 Claims. (Cl. 144—264.)

1. In a machine for bending wood about a form, means for clamping a portion of the wood to be bent against the form and means for automatically maintaining a uniform pressure upon the ends of the wood during the bending process.

1,461,472. OSCILLATING VALVE FOR INTERNAL-COMBUSTION ENGINES. RALPH A. BRADLEY, Ottawa, Kans. Filed Dec. 17, 1919. Serial No. 345,676. 1 Claim. (Cl. 123—80.)

An internal combustion engine having a detachable head provided with an intake passage way, and having an exhaust passage way in the cylinder head surrounding the intake passage way, a wall intermediate the passage ways, said wall forming a valve seat, said wall having ports communicating with the intake and exhaust passage ways, a valve for said seat having ports to register with said ports, a stem on said valve extending through the intake passage way, an intake pipe on the head and in which said stem is journaled, a crank

above said pipe extending from the stem and adapted for unitary movement therewith, a stud on the cylinder

head, a bell-crank lever pivoted to said stud, a link connecting the crank and bell-crank and means for separable connection of said bell-crank to a push rod.

1,461,473. DISHWASHER. CARL BREER, Summit, N. J. Filed July 21, 1920. Serial No. 397,877. 5 Claims. (Cl. 141-9.)

2. In a dish-washer, the combination of a dish-support; and a water deflector having an upwardly directed discharge and an inlet adapted to receive a jet of water from a different direction than the direction of discharge.

1,461,474. DISH-HOLDING TRAY. CARL BREER, Summit, N. J. Filed July 21, 1920. Serial No. 397,878. 4 Claims. (Cl. 141-11.)

3. In a dish-holding tray, the combination of a frame; longitudinal rods secured to parts of the frame; and upright dish supports formed of wire with upright sides

between the rods, the lower ends of said wires being provided with lateral extensions secured to said rods, said extensions forming torsion members on which the up-rights may swing.

1,461,475. WHEEL. REUBEN GLADSTONE BRUNER, Windsor, Ontario, Canada. Filed Mar. 23, 1922. Serial No. 545,973. 8 Claims. (Cl. 152-28.)

1. In a wheel of the character described, a hub, a wheel body organized with the hub, a felly movably mounted on the wheel body, compression coil springs having their inner ends engaged with the hub, and a seat for the outer end of each of said coil springs, each seat being supported upon said felly when the spring with which it is associated is subjected to load and being engaged with the wheel body when the spring with which it is associated is not subjected to load.

1,461,476. DEVICE FOR DRIVING THE BANDS OF ROLLING PLATFORMS. LOUIS DOMINIQUE AUGUSTE CASALONGA, Paris, and GEORGES MIOT, Vanves, France. Filed May 3, 1922. Serial No. 558,250. 7 Claims. (Cl. 104-25.)

1. A traction device for rolling platforms, comprising, a plurality of carriages, a movable band fixed to each of the carriages, a plurality of sets of cooperating rollers, said band being positioned between the rollers of each set, each set comprising a driving, and a pressing roller.

1,461,477. RAILWAY TIE. CLINTON J. COOPER, Oak Park, Ill. Filed Dec. 13, 1922. Serial No. 606,676. 3 Claims. (Cl. 238-62.)

1. A railway tie consisting of a single casting and comprising smooth vertical side walls provided at their outer edges with outwardly extending lugs and a continuous integral longitudinal web of uniform thickness connecting the side walls and composed of horizontal

end portions arranged at the lower edges of the side walls, a central horizontal top portion arranged at the upper edges of the side walls and intermediate vertically connecting portions extending from the end portions to the central portion, said web forming a central chamber and end pockets, the central chamber being open at the bottom and closed at the top and the end pockets being open at the top and outer ends, rail supporting blocks arranged within the end pockets, and means carried by the lugs for securing rails upon the end blocks.

1,461,478. PROTECTIVE VENTILATING SCREEN FOR VEHICLES. BENJAMIN A. DANIELS, Tampa, Fla. Filed May 31, 1922. Serial No. 564,696. 1 Claim. (Cl. 296—95.)

In combination, a spring roller, a protective ventilating screen of substantially rectangular configuration and being made of a perforated flexible metallic material, said screen being secured along its upper edge to the spring roller, a fabric binding the side and lower edges of the screen, said binding along the lower edge of the screen being fashioned to provide a sleeve extending transversely of the screen, a stiffening rod disposed in the sleeve, and brackets engagable with the top bow of an automobile for pivotally supporting the roller at its ends in transverse relation to the windshield, said binding at the lower edge of the screen having spaced apart depending tab portions provided with eyelets for engaging hooks or the like at the lower end of the windshield frame to releasably hold the screen in extended position.

1,461,479. ICE SAW. JEROME COLWELL DIETRICH, Galt, Ontario, Canada. Filed Mar. 20, 1922. Serial No. 545,326. 7 Claims. (Cl. 262—33.)

1. An ice saw having a vane attachment connected to its blade back of the teeth and adapted to press the saw against its work when said blade is moved longitudinally.

1,461,480. SPOOL HEAD. VICTOR GERO, Philadelphia, Pa. Filed Mar. 21, 1922. Serial No. 545,435. 4 Claims. (Cl. 242—124.)

1. In a spool or bobbin, the combination of a spool body, a head arranged to be rigidly secured to said body, a protecting rim circumferentially arranged about said head, and a pin projecting axially through said head.

1,461,481. DOLLY JACK. FELTA B. GIST and CHARLES F. MARTIN, Orange, Calif. Filed Apr. 23, 1921. Serial No. 463,805. 2 Claims. (Cl. 254—7.)

1. In combination, a dolly having an aperture formed therein, a socket member mounted within the aperture, a notched flange formed on one end of the socket member, a pin removably mounted in the dolly and engaging the notch of said flange for locking the socket member against rotation within the aperture, a threaded shaft mounted in the socket member, a head formed on the upper end of the shaft, a wheel having radially extending teeth fixed to the shaft, an arm pivoted on the shaft, a spring pressed pawl carried by the arm and normally engaging said teeth, an operating handle connected to the arm, and means for rotating the pawl to cause the latter to engage the teeth of said wheel to effect rotation of said shaft in one direction or the other, according as the arm is moved in one direction or the other.

1,461,482. PIPE COUPLING. HENRY W. HAHN, Denver, Colo. Filed Jan. 25, 1922. Serial No. 531,687. 2 Claims. (Cl. 285—115.)

1. A pipe fitting, comprising a bell having a tapered bore, a pipe extending into said bore, the wall of the tapered bore of the bell being provided adjacent the inner end thereof, but spaced therefrom, with an angular groove, and a soft metal caulking ring pressed into the space between the pipe and the walls of the bore and extending into and fitting said groove.

1,461,483. RESILIENT VEHICLE WHEEL. THOMAS S. HALLETT, Mile 54, Alberta, Canada. Filed June 8, 1921. Serial No. 476,034. 8 Claims. (Cl. 152—30.)

6. In a resilient wheel, a hub, a tread comprising a plurality of sections, and spokes extending radially from the hub and connected with the sections, the said hub comprising portions circumscribing its body in spaced relation thereto and provided with slots opening through one edge of each portion and terminating at their inner ends in threaded openings the spokes each comprising an inner and an outer section and the inner section including a stem having an enlarged inner end, the stems being of a diameter to pass through the respective slots in the said portions of the hub, and a bushing sleeve fitted onto each of the stems and movable longitudinally thereof and threaded into the respective opening in the said portions of the hub, and means resiliently connecting the inner and outer sections of each spoke.

1,461,484. GEARING MECHANISM. CARL HENDERSON, Chicago, Ill., assignor to Miehle Printing Press and Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 1, 1922. Serial No. 533,191. 5 Claims. (Cl. 101—352.)

1. In a printing press, the combination of a form member, inking rolls associated therewith, a movable frame in which said inking rolls are mounted, gears through which said rolls are actuated, and a driving gear for said other gears carried by said frame and movable bodily with said gears, when the frame is moved for tripping the inking rolls, to maintain a constant degree of mesh between said gears.

1,461,485. SINGLE-TUBE PNEUMATIC TIRE. WILLIAM H. KERN, Jersey City, N. J. Filed Mar. 4, 1922. Serial No. 540,992. 2 Claims. (Cl. 152—20.)

2. A single tube pneumatic tire having a tubular air chamber, a flattened auxiliary chamber communicating therewith, a flat metallic band within said auxiliary chamber and upon which the sides of said chamber are adapted to be compressed.

1,461,486. LIQUID MEASURING AND DISPENSING VESSEL. JOHN M. KISHPAUGH, Pasadena, Calif. Filed Mar. 9, 1922. Serial No. 542,281. 4 Claims. (Cl. 221—95.)

1. A liquid dispensing and measuring vessel comprising a body, a sleeve sustained on the body, transverse inclined partitions arranged within the body at one side of the sleeve to divide the latter into a plurality of compartments, a discharge spout communicating with said sleeve, a plurality of openings formed in said sleeve for effecting communication between the compartments and said discharge spout, and a valve member movable in the sleeve and having ports formed therein to control said openings.

1,461,487. LOOKOUT OR DOOR PEEP. FRANZ LAIBACH, New York, N. Y. Filed May 21, 1919. Serial No. 298,731. 4 Claims. (Cl. 20—30.)

1. A tube having angularly adjustable lenses therein, and means for supporting said tube and means for adjusting said lenses in unison.

1,461,488. DOUGHNUT-COOKING MACHINE. HENRY LISI, Susquehanna, Pa. Filed Sept. 9, 1921. Serial No. 499,387. 8 Claims. (Cl. 53-7.)

1. A device of the class described comprising a support, a grease pan, an open-work basket for holding the articles to be cooked, said basket being arranged in said pan, hoisting means connected with one end of the basket for raising it to dumping position, a cover for the basket, and means for raising said cover to and holding it in a vertical position to permit the basket to be raised.

1,461,489. WINDMILL REGULATOR. JOHN M. LOWE, Butler, Ind. Filed Jan. 26, 1922. Serial No. 531,951. 8 Claims. (Cl. 103-29.)

1. A windmill regulator comprising a support; a lever fulcrumed thereon; a pawl carried and operated by the lever; a rack bar cooperating with the pawl; and means for mounting the rack bar for longitudinal sliding movement, and for transverse movement into and out of engagement with the pawl.

1,461,490. SAFETY GUARD FOR RAZORS. ANDREW McANULTY, Ottawa, Ontario, Canada. Filed Feb. 28, 1921. Serial No. 448,413. 5 Claims. (Cl. 30-12.)

1. In a razor of the class described having a safety guard pivotally attached to the blade, means for holding

the said guard on the blade comprising a stop integral therewith and resting on the razor tang, and a latch

attached to said guard and provided with stop means to rest on the back of the razor and locking means to hold the said guard distant from said razor.

1,461,491. TOBACCO PACKER. OLAVES R. MATSON, Columbus, Wis. Filed May 23, 1921. Serial No. 472,014. 20 Claims. (Cl. 100-5.)

2. In a press of the character described, a frame, a press box carried by the frame and including a movable end wall, a follower, means for applying pressure to said follower comprising a stationary unit including a rack, and a movable unit carried by the movable end wall and including a rack, common operating mechanism for the units including a rotatable shaft, a pinion fixed to the shaft and engageable with the rack of the stationary unit, a pinion splined with the shaft and engageable with the rack of the movable unit, and a crank for operating said shaft, and means for operating the movable end wall.

16. In a press of the character described, a frame, a press box carried by the frame and including side walls, a stationary end wall, a movable end wall, and a bottom wall having a movable section connected with the movable end wall, and means for operating said movable end wall and said movable bottom section including an operating lever and a connecting rod between said operating lever and said movable section.

1,461,492. ELECTRICAL TESTING INSTRUMENT. JOHN F. MOODY, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed June 24, 1920. Serial No. 391,502. 9 Claims. (Cl. 175-183.)

1. The method of locating concealed conductors, which consists in impressing an alternating electro-motive force upon the said conductor, moving into the magnetic field thus created a winding whose plane is substantially perpendicular to the surface moved over, adjusting the posi-

1,461,496. FIRE KINDLER. JOHN QUIST, Detroit, Mich. Filed Oct. 8, 1921. Serial No. 506,275. 10 Claims. (Cl. 158—10.)

1. A lighter unit of the character described, comprising a receptacle, a multiplicity of upstanding sheets within said receptacle, said sheets being made of liquid absorbing material, and some of said sheets extending above the others for the purpose described.

1,461,497. RADIUS LEAF. GROVER C. ROBBINS, Blowing Rock, N. C. Filed Mar. 9, 1922. Serial No. 542,513. 2 Claims. (Cl. 267—67.)

1. In a radius leaf adjustment, a main leaf having an end provided with serrations on its upper and lower face and having a bolt hole and an elongated slot, a pair of clamping plates, the upper clamping plate having serrations on its under face engageable with the serrations on the top face of the main leaf, the lower clamping plate having serrations on its upper face engageable with the serrations on the lower face of the main leaf, said clamping plates having elongated slots adapted to be aligned with the bolt hole of the main leaf and having bolt holes adapted to be aligned with the elongated slot of the main frame, a bolt extending through the slots of the clamping plates and the bolt hole of the main leaf, a nut engageable with the bolt for urging said clamping plates into engagement with the main leaf, the bolt holes of the clamping plate and the elongated slot of the main leaf being adapted to receive securing means.

1,461,498. ROPE HITCH. ARTHUR L. SHANER, San Francisco, Calif. Filed June 7, 1922. Serial No. 566,485. 1 Claim. (Cl. 24—134.)

A device of the character described, comprising a U shaped sleeve adapted to receive a rope therein, and a hook element pivotally secured to said U shaped sleeve, said hook element having a boss formed therein and

adapted to lie within said U shaped sleeve when said hook is parallel to said sleeve, said hook being adapted to

receive a loop of said rope after said rope has been secured around an object for the purpose of maintaining said boss in contact with said rope within said sleeve.

1,461,499. WINDOW STOP. NORA L. SHANKLAND, Newton, Iowa. Filed Nov. 23, 1921. Serial No. 517,222. 4 Claims. (Cl. 292—207.)

1. A window stop comprising a plate to be secured to one of the side rails of the sliding window sash, a keeper formed therein, an abutment hinged to the plate and capable of being swung outwardly to overlie the other sash and capable of being swung inwardly against the plate when not in use, and a locking bolt slidably and pivotally mounted on the abutment for engagement in the keeper to retain the abutment in operative position and adapted to be swung parallel to the plate when not in use.

1,461,500. SCREEN FOR WINDOWS AND SCREEN DOORS. HARTWELL B. SHIPPEE, Killingly, Conn. Filed Jan. 31, 1922. Serial No. 533,053. 2 Claims. (Cl. 156—14.)

2. In a device of the character described, the combination of a frame having a continuous groove extending entirely therearound in one face thereof, said groove being comparatively deep and narrow and having an inner and outer wall, the outer wall being straight and parallel to the outer edge of said frame, the inner wall extending at an acute angle to the inner edge of said frame and

having beveled corners, and being of less height than the outer wall, a wire mesh fitting upon said frame and extending into said groove, a moulding having a comparatively broad head entirely covering said groove and having a comparatively long rounded tongue fitting within said groove for holding said mesh in position without danger of injury thereto, and securing means for holding said moulding upon said frame, whereby the outer wall of the groove will tip said moulding over slightly onto the inner wall, thereby binding the moulding upon the mesh at this point and also causing the tongue to wedge more firmly within said groove, as and for the purposes set forth.

1,461,501. TOILET KIT. HENRY SLAIGER, Attleboro, Mass., assignor to D. F. Briggs Company, Attleboro, Mass. Filed July 18, 1922. Serial No. 575,787. 5 Claims. (Cl. 132—79.)

1. A toilet kit including a tubular container open at each end, the ends of the container having bayonet slots, a cap for each end of the container having a rim fitting over the same and having a slotted sleeve secured to the cap and receivable in the container, ferrules slidable in the sleeves, toilet members carried by the ferrules, and pins carried by the ferrules for securing the toilet articles thereto and engageable through the slots of the sleeves and in the respective container slots.

1,461,502. CURRENT MOTOR. HENRY R. SOLINGER and ERNEST G. MESSER, Zillah, Wash., assignors to Solinger Power Company, Elma, Wash., a Corporation of Washington. Filed Feb. 15, 1922. Serial No. 536,688. 2 Claims. (Cl. 170—97.)

1. In a current motor, a plurality of supports carrying bearings, shafts journaled through said bearings and operatively connected, a power take-off device at one end of the series of shafts, and a conical rotor on each shaft equipped with spirally arranged blades, said rotors being of progressively increasing diameters.

1,461,503. TIRE CARRIER. ETHEL D. STINSON, Bisbee, Ariz. Filed Apr. 22, 1922. Serial No. 555,984. 2 Claims. (Cl. 224—29.)

1. A tire carrier comprising a rim provided with separable confronting ends, a lever pivotally connected at spaced points to said ends and designed to cause said ends to abut and to overlap in the expansion and contraction of said rim, one of said ends being provided with a keeper and the lever being provided with a lock engageable with said keeper, the other end being provided with a swinging latch designed to engage the relatively free end of the lever to hold the same in the contracted condition of the carrier.

1,461,504. MACARONI DIE. GUIDO TANZI, Long Island City, N. Y. Filed June 13, 1922. Serial No. 567,997. 6 Claims. (Cl. 107—14.)

1. A macaroni die comprising a plurality of plates secured together, one said plate being provided with a plurality of receiving orifices arranged in pairs and the other said plate being provided with a plurality of discharge orifices each discharge orifice communicating with a pair of receiving orifices and an irregularly shaped passage connecting each pair of receiving orifices with its co-acting discharge orifices.

5. A macaroni die comprising a plurality of plates secured together, one said plate being provided with a plurality of receiving orifices and the other said plate being provided with a plurality of discharge orifices, each said discharge orifice communicating with a plurality of receiving orifices and each said receiving orifice being provided with a discharge aperture in the wall thereof, all said discharge apertures of each associated group communicating with a single discharge passage, arranged in the nearest adjacent side of the plate, wherein the receiving orifices are produced.

1,461,505. RESILIENT RIM FOR AUTOMOBILE WHEELS. FREDERICK THORNTON, Huntington, W. Va. Filed Nov. 3, 1922. Serial No. 598,814. 3 Claims (Cl. 152—8.)

3. In a resilient rim structure, an element adapted to fit about the periphery of a vehicle wheel, a tire spaced from said element outwardly, a plurality of leaf springs arranged about the periphery of said element, some of said springs being arranged in pairs, having oppositely curved ends, said ends of said springs being arranged to slide upon each other for a considerable distance, a radially arranged set-screw, screw-threaded into said element for each of said pairs of springs and adapted to adjust the tension of the inner one of each of said pairs

of springs, a clip member surrounding the inner spring of alternate pairs of said pairs of springs, a socket in

said clip member on the inner side of said spring, and a reduced cylindrical portion on the upper end of said set-screw fitting into said socket.

1,461,506. NECKTIE HOLDER. CHARLES VACEK, Chicago, Ill. Filed June 13, 1921. Serial No. 477,171. 1 Claim. (Cl. 24-49.)

A necktie holder comprising a body, a pair of bowed rearwardly and oppositely inclined arms carried by said body at its upper end, said arms being reduced where they join the body to provide a depression between the adjacent ends of the arms to prevent displacement of the tie, the lower end of the body being expanded, a clip carried by said expanded portion at the rear side thereof, the arms serving to hold the device in place on a collar, and the expanded portion cooperating with the depression to hold a tie in place on the device.

1,461,507. GASOLINE TANK AND FEED-LINE LOCK. NELSON PAUL WHITTIER, Beverly Hills, Calif. Filed Mar. 30, 1920. Serial No. 369,992. 2 Claims. (Cl. 251-7.)

1. A tank having a rotatable closure cap, an outlet pipe, and a rotatable valve controlling the pipe, and means associated with the cap and valve for locking the two against rotation.

1,461,508. CULTIVATOR. GEORGE G. WORSTALL, Toms River, N. J. Filed Apr. 21, 1919. Serial No. 291,614. 1 Claim. (Cl. 97-192.)

In a device of the class described, a cultivator comprising a frame and a ground wheel carried by the forward end of the frame; deflector rods mounted for free straight-line reciprocation on the frame, the rods converging in advance of the wheel, and being disposed at a pronouncedly acute angle to the horizontal whereby the rods may reciprocate freely as their forward ends ride along the soil.

1,461,509. HAM BOILER. HANS ADELMANN, New York, N. Y., assignor to Ham Boiler Corp., New York, N. Y., a Corporation of New York. Filed June 22, 1921. Serial No. 479,562. 3 Claims. (Cl. 100-57.)

1. In a ham boiler, the combination with a receptacle constituting a mold for a ham or the like, of a cover fitted slidably within the receptacle for compressing the ham, said cover being provided with upwardly projecting standards, the upper ends of which extend outward beyond the upper edge of the receptacle, and engagement means for the receptacle pivoted to and depending from the outwardly projecting portions of the standards, the engagement members comprising hooks, each of which includes a knuckle pivoted to a standard, a catch member spaced below and movable relatively to the knuckle, and connecting means between the knuckle and the catch member providing for movement of the catch member resiliently with respect to the knuckle.

1,461,510. TYPEWRITING MACHINE. JOHN H. BARR, New York, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Feb. 5, 1921. Serial No. 442,790. 21 Claims. (Cl. 197-145.)

1. In a typewriting machine, the combination of a rotary platen, a platen axle, a platen carrier, and means for affording universal adjustment of the platen in a plane perpendicular to the platen axis and relatively to said platen carrier.

1,461,511. TYPEWRITING MACHINE. JOHN H. BARR, New York, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed May 14, 1921. Serial No. 469,461. 37 Claims. (Cl. 197—157.)

2. In a typewriting machine, the combination of a ribbon vibrator, printing keys, vibrating connections between said printing keys and said ribbon vibrator including a member provided with a slot straight throughout its entire length, and an actuator in engagement with said slot and operative during part of its movement while traversing said slot to actuate said member to move the vibrator to the printing point, said actuator being wholly self-guided and while moving in said slot during the latter part of its movement being substantially ineffective to move said member and said vibrator.

1,461,512. CONTROL SYSTEM. EDGAR M. BOUTON, Wilkesburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 17, 1920. Serial No. 410,906. 6 Claims. (Cl. 172—179.)

1. In a motor-control system, the combination with an electrical device, a switch for starting said device and means comprising an actuating coil for closing said switch, means for energizing said coil, means electrically connected to said device for maintaining said coil energized after the closing of said switch, and means for preventing the starting of said device through said maintaining means.

1,461,513. AUTOMATIC MINE-CAR CAGER. FERDINAND F. BRASCHE, Edwardsville, Ill., assignor of one-third to Charles Holding and one-third to William Palecek, both of Collinsville, Ill. Filed Nov. 25, 1921. Serial No. 517,673. 3 Claims. (Cl. 104—253.)

1. In a mine car cager, a plurality of bearings, a rocker shaft mounted in the bearings between the rails of an inclined track, said rocker shaft comprising two sections hingedly united near one end, a pair of car stops fixed to one section of the rocker shaft and positioned at an angle to each other so that one stop will lie out of car holding position when the other stop lies in car holding position, a crank member fixed to one end of the rocker shaft to be moved downwardly by a

descending mine cage to move the car stop in car holding position out of car holding position and to simultaneously move the car stop out of car holding position

into car holding position and resilient means mounted upon one end of the rocker shaft and engaging one of the bearings and a nut carried by one end of the rocker shaft to adjust the tension of said spring.

1,461,514. GRINDING MACHINE. JAMES A. BURNS, Wilkesburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 25, 1922. Serial No. 531,626. 5 Claims. (Cl. 51—206.)

1. The combination in a face disc grinding wheel, of a plurality of angular abrasive blocks disposed near the outer periphery thereof and means for aligning and individually securing said blocks in their respective positions, said means comprising a plurality of screw chuck members mounted on said wheel, each including a clamping plate, a stud bolt an adjusting nut and a tapered wedge sleeve, said clamping plate having a plane surface for engaging said abrasive material and a tapered concave surface in engagement with said wedge sleeve.

1,461,515. METAL WHEEL. ROBERT J. BURROWS, Buchanan, Mich., assignor to Clark Equipment Company, Buchanan, Mich., a Corporation of Michigan. Filed May 14, 1919. Serial No. 297,101. 14 Claims. (Cl. 301—63.)

9. A metal wheel, comprising a hub having peripheral flanges between the ends thereof, metal discs adapted to fit against the outer faces of said flanges and having out-turned flanges adapted to bear upon the hub, in-turned flanges at the outer margins of said discs, a rim

secured to said in-turned flanges, said discs having radial portions adjacent to said in-turned flanges and inwardly-inclined portions extending from said radial portions, forming a box-like rim structure, separable collars fitted

upon the end portions of the hub and bearing against the outer faces of said discs, said collars having recesses which receive said out-turned flanges and means securing said collars to said discs and to said peripheral flanges.

1,461,516. SUPPORT FOR CLASP BRAKE BEAM. EDWIN G. BUSSE, Chicago, Ill., assignor to Chicago Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 31, 1922. Serial No. 585,511. 13 Claims. (Cl. 188—213.)

5. In a clasp brake arrangement, a common third or fourth point support for both brake beams applied to the same pair of wheels.

1,461,517. SHOEMAKER'S REPAIR FORM. ROSARIO CASTROGIOVANNI, Brooklyn, N. Y. Filed Oct. 26, 1921. Serial No. 510,490. 1 Claim. (Cl. 12—123.)

In a form of the class described, a sole or base portion substantially flat, producing in elevation substantially a straight line both transversely and longitudinally, and

a heel portion therefor also substantially flat, and having a pointed toe portion, a reinforcing web of slight projection from the toe to the shank turning sharply substantially at the instep thereof and in combination side webs extending upwardly from said base to a point beyond the ankle.

1,461,518. TRANSFORMER RADIATOR. WALTER M DANN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 14, 1921. Serial No. 452,357. 8 Claims. (Cl. 257—139.)

2. A radiator comprising a main chamber enclosed by spaced top and bottom members and two parallel side walls disposed intermediate said members and attached thereto, said side walls severally comprising a plurality of separate members of substantially U-shape disposed in side-by-side relation the adjacent edges of which are welded together to form auxiliary chambers closed on three sides and communicating with said main chamber.

1,461,519. DISCHARGE-INDICATING DEVICE. OTTO H. ESCHHOLZ, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 14, 1921. Serial No. 469,676. 14 Claims. (Cl. 234—1.)

1. In combination with a lightning arrester comprising two spaced discharge members, a discharge-recording member disposed intermediate said discharge members and means dependent upon variations in the atmospheric temperature for moving said discharge-recording member.

1,461,520. VALVE OR COCK. WALTER A. FORMAN, Brooklyn, N. Y. Filed Nov. 17, 1917. Serial No. 202,490. 6 Claims. (Cl. 251—91.)

1. A jacketed valve for controlling flow of normally solid or semi-solid material, having a heating jacket surrounding the plug chamber and outlet, with its casing having a drainage duct from the lower part of the valve passage adjacent the valve chamber, and in heat-conducting contact with said jacket adapted to drain off the contents of said passage when the valve is closed to prevent the solidifying of the material and avoid the locking fast of the plug.

1,461,521. CARBURETOR-CONTROLLING DEVICE. FRANK FORNEY and ROBERT H. HOFF, Detroit, Mich. Filed Oct. 31, 1921. Serial No. 511,637. 1 Claim. (Cl. 74—39.)

In a carburetor controlling device an instrument-board base comprising an arc shaped indexing strip with indexing indentations therein, united by radial strips at its ends with a central boss, a shaft turning in said boss and connected at one end to the needle valve of a carburetor and having a dial disc fast upon the other, and an operating lever pivoted upon the said shaft, said lever being provided with a latch pin engaging said dial disc and also provided with an index pin engaging the indentations of the said arc shaped indexing strip; the said base being provided also with raised stops in the path of motion of the said operating lever.

1,461,522. COMBINED PIPE AND NUT WRENCH. GEORGE FORTON, Detroit, Mich. Filed Sept. 21, 1922. Serial No. 589,523. 1 Claim. (Cl. 81—105.)

A wrench comprising a handle bar having a jaw, a strap embracing said handle bar and pivotally con-

nected thereto, a shank slidable in said strap and provided with a jaw confronting the jaw of said handle bar, means between said handle bar and said shank maintaining said shank normally tilted relative to said handle bar, a nut in said strap in threaded engagement with said shank and adapted for shifting said shank relative to the strap, and a latch slidable on said handle bar into said strap and adapted to prevent tilting of said strap relative to said handle bar.

1,461,523. LIGHT-CONTROLLED MEANS FOR OPENING AND CLOSING AN ELECTRIC CIRCUIT. FRANS JOEL FRANSSON, Stockholm, Sweden, assignor to American Gas-Accumulator Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Sept. 15, 1922. Serial No. 588,307. 12 Claims. (Cl. 200—138.)

3. An electric circuit controlling means comprising two yielding flat strips supported in spaced relation to each other, said strips being situated in substantially the same plane, contacts carried by said strips and means whereby the alternate action of light and darkness on said strips causes movement thereof to control said contacts.

1,461,524. CUFF BUTTON. CHARLES ALLEN GODDARD, Cheshire, Conn., assignor to The Ball and Socket Manufacturing Company, West Cheshire, Conn., a Corporation of Connecticut. Filed Dec. 5, 1922. Serial No. 604,985. 5 Claims. (Cl. 24—102.)

1. The method of manufacturing cuff buttons consisting in passing the free extremities of an elastic member through openings in the backs of the buttons, bending downwardly against the protruding extremities of the elastic member inwardly extending tongues to thereby cause the tongues to engage and anchor the elastic member to the button backs and in so doing to cause the protruding extremities of the elastic members to bend and lie against the inner wall of the button backs and then assembling upon the said inner wall suitable cover members.

1,461,525. SLIDING MOLDBOARD FOR CABINETS. HARRY A. HALL, Newcastle, Ind., assignor to Hoosier Manufacturing Company, Newcastle, Ind., a Corporation of Indiana. Filed Aug. 14, 1922. Serial No. 581,621. 6 Claims. (Cl. 45—16.)

6. In a kitchen cabinet, a base, a superstructure, a mold-board on the base slidable in and out under the superstructure, roller-bearings between the superstructure and mold-board fixed to the superstructure, roller-

bearings under the mold-board fixed to the mold-board, movable track-bars under the mold-board for the last rollers to roll upon, springs to press the track-bars to-

ward the mold-board, and means for holding the mold-board against sliding adjustment at any position of its range in use.

1,461,526. SPARK TIMER. GUSTAVE L. HERZ, New York, N. Y., assignor, by mesne assignments, to Ely Bernays, New York, N. Y. Filed Oct. 11, 1921. Serial No. 507,060. 3 Claims. (Cl. 200—27.)

2. An engine casing, a rotary cam having a concentric portion, a rotatively adjustable housing and contact pieces carried thereby, said housing having an inner circular flange mounted on the concentric portion of the cam, and an outer circular flange pressing against the casing whereby the housing is centered with respect to the axis of rotation of the cam and is positioned longitudinally with respect to the cam, said housing also having a central chamber for receiving the cam.

1,461,527. RUBBER APRON FOR CARDING MACHINES. THOMAS H. HUNTER and GEORGE W. HUNTER, Philadelphia, Pa. Filed July 16, 1919. Serial No. 311,249. 2 Claims. (Cl. 19—153.)

1. A rubber apron comprising a rubber body, a canvas backing fixed to the inner face of said body, and rubber flanges located at each edge of the apron and fixed to the inner face of said canvas backing.

1,461,528. AUTOMATIC SWITCH. FRANK S. IRVINE, Huntington, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 22, 1920. Serial No. 411,880. 9 Claims. (Cl. 179—18.)

1. In a telephone system, subscribers' lines arranged in a plurality of groups, automatic switches arranged in a plurality of groups for serving all of said lines, and arranged to be taken for use in a given order, each group of switches arranged to serve as first choice a different one of said groups of lines, means responsive to a call

in any group of lines to operate an automatic switch in the group normally serving such group of lines as first choice, means for operating a switch in another group when all the switches normally serving as first choice the group of lines containing the calling line are busy, a

preference device for changing the order in which the switches of a group are to be taken for use, and means responsive to the operation of a switch for operating said device whether the operated switch is taken to serve its first choice group of lines or another group.

1,461,529. TOBACCO-LEAF MACHINE. GRAHAM H. JACKSON, Newark, N. J., assignor to Universal Tobacco Machine Co., New York, N. Y., a Corporation of New York. Filed Dec. 24, 1921. Serial No. 524,675. 7 Claims. (Cl. 131—57.)

1. In a tobacco leaf-treating machine, the combination of stem-treating rolls and means for automatically moving one of said rolls out of operative relation with the other at a predetermined point in the treatment operation.

1,461,530. DRAFTING INSTRUMENT. JOSEPH A. KAMINSKI, Chicago, Ill. Filed Dec. 20, 1920. Serial No. 431,829. 5 Claims. (Cl. 33—27.)

1. In a device of the class described the combination of a support, a member connected to the support, said member having a marking element connected thereto, said member including a plurality of telescopic members adapted to be extended and retracted and held with relation to each other, and means for adjusting said elements relatively to the support when said telescopic members are held together.

1,461,531. METHOD OF MAKING CUSHION-TIRE STRUCTURES. FRED R. KLAUS and FRANK H. MEYER, Warren, Ohio. Filed Feb. 2, 1923. Serial No. 616,510. 11 Claims. (Cl. 29—159.)

1. The method of making a tire base or rim which comprises forming complementary locking means on endless annular side sections and an endless ring of smaller diameter, and stretching said ring into engagement with said side sections.

1,461,532. CUTTER BAR FOR LAWN MOWERS. EDWIN C. LANE, Mahwah, N. J. Filed Mar. 5, 1921. Serial No. 449,714. 5 Claims. (Cl. 56—294.)

3. In a lawn-mower having a cutting reel, a transverse member, a wire coiled at one end to form a spring and secured to the transverse member adjacent to each side frame, and a lower blade lifted at each end by the ends of the spring wires by an upward movement of their ends.

1,461,533. HAIR CURLER. ORA D. MCCLINTOCK, San Francisco, Calif. Filed Oct. 10, 1921. Serial No. 508,541. 2 Claims. (Cl. 132—43.)

1. A hair curler comprising a rubber covered hairpin member of soft wire provided with a medial loop, and a piece of rubber tubing adapted to surround the ends of said hair-pin member and be engaged thereon by returning the ends of said hairpin member.

1,461,534. STEAM-LOCOMOTIVE LIGHTING SYSTEM. ALEXANDER MCGARY, New York, N. Y. Filed Feb. 11, 1920. Serial No. 357,896. 3 Claims. (Cl. 290—3.)

1. A steam locomotive lighting system having in combination an alternating current generator driven by

steam from the locomotive one or more headlights fed by the generator at the generator voltage, a step down transformer also connected to the generator and locomotive lights connected to be supplied from the generator through said transformer at a relatively low voltage, and means whereby said one or more headlights may be supplied at relatively low voltage from said transformer to dim the same.

1,461,535. CAR-DOOR ROLLER. CHARLES MCGOWAN, GUSTAF PETERSON, and ARTHUR A. LUND, Susanville, Calif. Filed Dec. 18, 1922. Serial No. 607,573. 2 Claims. (Cl. 193—42.)

1. A device of the class described comprising a supporting bar of channel form having longitudinally extending elongated slots in the web thereof and at its ends, bolts extending through and slidably disposed in said slots and having nuts threaded upon the outer ends thereof, said bolts being provided with laterally extending inner ends forming clamping arms, a block slidably disposed in the channel of the supporting bar and projecting beyond the free longitudinal edges of the flanges of said supporting bar, said supporting bar having a further central longitudinally extending elongated slot in the web thereof, a bolt extending through the last named slot and through said block, a nut upon the outer end of the bolt for adjustably clamping the block against sliding movement, and a roller supporting bracket pivotally mounted on said block.

1,461,536. YARN-TENSION DEVICE. JOHN O. MCKEAN, Westfield, Mass., assignor to Foster Machine Company, Westfield, Mass., a Corporation of Massachusetts. Filed Oct. 21, 1921. Serial No. 509,249. 8 Claims. (Cl. 242—150.)

1. A tension device for stop motions including a suitable yarn support carried by the stop motion drop arm, and a gravity operated non-metallic tension disc having substantially the softness of hard fibre, normally resting on said support.

1,461,537. YARN-TENSION DEVICE. JOHN O. MCKEAN, Westfield, Mass., assignor to Foster Machine Company, Westfield, Mass., a Corporation of Massachusetts. Filed Oct. 21, 1921. Serial No. 509,250. 8 Claims. (Cl. 242—150.)

1. A tension disk having a yarn contact surface of a metal having substantially the softness of lead.

1,461,538. SHEET-METAL BUILDING. ANGUS MCKENZIE, Canton, Ohio, assignor to United Alloy Steel Corporation, New York, N. Y., a Corporation of New York. Filed May 15, 1918, Serial No. 234,790. Renewed Dec. 13, 1922. 6 Claims. (Cl. 189—2.)

6. In a knock down building of the character described, the combination with an angle iron base, of studs mounted

1,461,543. CANDY NOVELTY. JULIA R. PETTIT, Montclair, N. J., assignor to Huyler's, New York, N. Y., a Corporation of New York. Continuation of application Serial No. 500,326, filed Sept. 13, 1921. This application filed Oct. 25, 1922. Serial No. 596,757. 4 Claims. (Cl. 46—40.)

4. A candy figure representing an animate object comprising a plurality of pieces of candy having suitable configurations to represent the head, body, legs and feet, said feet being adapted to support the object in upright position, wholly concealed means passing at least through the feet, legs and into the body portion to support same in fixed predetermined relationship, and means for securing other parts to said head and body.

1,461,544. HEADLIGHT. TRUMAN W. POST, Providence, R. I., assignor to Electric Autolite Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Sept. 12, 1917. Serial No. 190,977. 19 Claims. (Cl. 240—41.)

6. A device of the class described, comprising the combination of a casing; a reflector pivotally mounted therein; means for moving said reflector; and a single stop for limiting the movement of said reflector in both directions.

1,461,545. MECHANICAL PRESSURE ATOMIZING FUEL BURNER. WILLIAM R. PURNELL, Philadelphia, Pa. Filed June 4, 1921. Serial No. 475,143. 6 Claims. (Cl. 299—120.)

1. In a mechanical pressure atomizing fuel burner the combination of a burner pipe provided with a chamber; a tip member provided with a recess having lugs and a passage between said lugs and with an orifice communicating with said recess, secured to said pipe; and a plug member provided with an enlarged end portion having a circular recess constituting a whirling chamber, and a passage tangential to the periphery of said circular recess,

communicating with said first mentioned recess, said lugs being adapted to engage said enlarged end portion to position said plug member and said plug member also pro-

vided with a plurality of passages disposed parallel to the axis of said pipe and entering said chamber from said pipe, substantially as described.

1,461,546. APPARATUS FOR SPRAYING LIQUIDS BY COMPRESSED AIR. ROBERT ROBERTSON, London, England, assignor of one-half to Frank Hale Austin, Audlem, Chester, England. Filed June 17, 1920, Serial No. 389,693. Renewed May 31, 1923. 4 Claims. (Cl. 299—96.)

1. In a spraying apparatus wherein a pump is mounted in a container and has an outlet valve to establish communication between said pump and the container an agitator in said container operatively connected to said outlet valve to be actuated thereby in one direction when said outlet valve is opened, and means in said container adapted to actuate the agitator in an opposite direction.

1,461,547. REED FOR LOOMS. PAUL A. WAGNER, Jersey City, N. J. Filed Sept. 23, 1921, Serial No. 502,641. Renewed Dec. 9, 1922. 5 Claims. (Cl. 139—91.)

1. In a reed, a holder having grooves therein, dent-ends received in said grooves, and means formed by offsetting a portion of each dent-end for frictionally engaging such end with the walls of its groove.

- 1,461,548. METAL-WORKING TOOL. CLAUDE A. WEST, Detroit, Mich. Filed May 5, 1921. Serial No. 466,870. 3 Claims. (Cl. 279-9.)

1. A drive for metal working tools comprising in combination, a member provided with a tapered circular socket and with a bore extending longitudinally of the socket, the bore cutting through one side of the socket with a major portion of the bore circumference lying outside the socket circumference, a member having a tapered shank to fit said socket and provided with a longitudinal groove, and a key of circular form in cross-section fitting within the bore and held therein by engagement therewith with a side portion thereof projecting into said socket to engage and fit within the groove in the shank.

- 1,461,549. ANTIRATTLE. FLOYD G. WITHROW and HAROLD O. VAN ANTWERP, Grand Rapids, Mich.; said Van Antwerp assignor to said Withrow. Filed Nov. 12, 1921. Serial No. 514,836. 5 Claims. (Cl. 188-1.)

1. The combination with a brake rod and radius rod extending substantially parallel and a supporting member fixed to the radius rod and having an eye through which the brake rod extends of an anti-rattler engaging both the radius rod and brake rod adjacent the supporting member and exerting a pressure on the brake rod to press it against one surface of said eye.

- 1,461,550. COMPENSATING MECHANISM FOR BOTTLE-CAPPING MACHINES. CARL WALKER KENDALL, Glenside, Pa., assignor to Columbia Machine and Stopper Co. Inc., New York, N. Y., a Corporation of New York. Filed June 4, 1920, Serial No. 386,614. Renewed June 1, 1923. 4 Claims. (Cl. 226-84.)

1. A compensating mechanism for a bottle capping machine comprising, in a capping head, a main supporting member including a hollow cylinder, a cap-applying piston adapted to slide upwardly within said cylinder, a locking lever fulcrumed upon the upper end of said piston and adapted to have locking engagement with said cylinder thereby positively to lock said piston against upward movement in said cylinder, a bottle-ejecting plunger within said piston and adapted at its lower end to be engaged by the capped end of the bottle

to be moved upwardly thereby and adapted at its upper end to engage with and release said locking lever upon a predetermined extent of movement of said bottle end into said throat, a restoring spring to return said piston

to the cap-applying position, and a bottle-ejecting spring for said plunger for ejecting the capped bottle, and a restoring spring for the locking lever for moving it to the locking position.

- 1,461,551. SHIP-PROPULSION SYSTEM. CAMPBELL MACMILLAN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 19, 1921, Serial No. 501,651. Renewed May 10, 1923. 3 Claims. (Cl. 171-119.)

1. In an electric power system of the class described, an adjustable speed generating machine of the synchronous type, a load driving dynamo electric machine supplied thereby, means for controlling the excitation strength of one of said machines, a commutator type dynamo electric machine having a freely rotatable element connected to operate said excitation controlling means, said commutator machine comprising a winding connected in series relation with said generator and an opposing winding connected to respond to the voltage of said generator and means in the circuit of said voltage winding to render the current therein substantially independent of changes in generator voltage due to changes in speed.

- 1,461,552. SHIP-PROPULSION SYSTEM. ALBERT H. MITTAG, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 19, 1921. Serial No. 501,652. 5 Claims. (Cl. 172-8.)

1. In an electric power system wherein a variable speed synchronous generator is arranged to supply operating

current to an alternating current work motor, stability responsive means comprising a pair of coils arranged

to produce opposing effects and connected respectively in series relation with the work motor and generator field circuit.

1,461,553. ELECTRIC SHIP PROPULSION. ALBERT H. MITTAG, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 24, 1921. Serial No. 502,925. 4 Claims. (Cl. 172—8.)

1. An electric ship propulsion system comprising an adjustable speed synchronous generator, a propeller driving motor provided with an armature having a phase winding adapted to be supplied with direct current for synchronous operation, a rotary converter having its alternating current end connected in series relation between said generator and motor and means for connecting the direct current end of said rotary converter to said phase winding for synchronous operation of said propeller motor.

1,461,554. BUSHING EXTRACTOR. ANDREW RAFFAY, Schenectady, N. Y. Filed Apr. 3, 1922. Serial No. 549,067. 12 Claims. (Cl. 29—88.)

1. A bushing extractor comprising a pulling tool having a hook end adapted to engage the bushing, and a

sleeve movable along the said tool toward the hook end thereof and adapted to be slid over the axle spindle for holding the hook end of the pulling tool in locking engagement with the bushing.

1,461,555. CAST-METAL ANNEALING BOX. EMIL C. RAUSCHENBERG, Wheeling, W. Va., assignor to Wheeling Mold & Foundry Co., Wheeling, W. Va. Filed Dec. 28, 1922. Serial No. 609,415. 5 Claims. (Cl. 263—49.)

1. A cast metal annealing box having its body portion provided with depressed corrugations extending upward and continuous across the center of its top, said depressions being separated by straight stiffening portions.

1,461,556. VARIABLE-SPEED TRANSMISSION. JOHN REECE, Boston, Mass., assignor to Reece Transmission Company, Boston, Mass., a Corporation of Maine. Filed Mar. 11, 1920. Serial No. 364,897. 9 Claims. (Cl. 74—34.)

1. In combination, a driving member, an intermediate member actuated from the driving member, and a driven member actuated from the intermediate member, the intermediate member comprising a rotatable piston, a stationary cylinder co-operating with said piston, a liquid connection between said piston and cylinder, and means for holding said liquid against rotation in one direction and permitting it in the other.

1,461,557. POWER TRANSMISSION. JOHN REECE, Boston, Mass., assignor to Reece Transmission Company, Boston, Mass., a Corporation of Maine. Filed Jan. 25, 1922. Serial No. 531,591. 7 Claims. (Cl. 74—34.)

1. A variable speed transmission apparatus comprising in combination, a rotating driving member, a yielding and reasserting device carried on said driving member, a rotatable driven member, and a train of connec-

tions, between said device and the driven member, including a one-way device controlling the same, where

by rotation is transmitted through said first device, in one direction only, to the driven member, and means for cushioning the action of said one-way device.

1,461,558. POWER-TRANSMISSION APPARATUS
JOHN REECE, Boston, Mass., assignor to Reece Transmission Company, Boston, Mass., a Corporation of Maine. Filed Jan. 25, 1922. Serial No. 531,592. 9 Claims. (Cl. 74—34.)

1. A variable speed transmission apparatus comprising in combination with the rotating driving and driven members, a yielding and reasserting device arranged to be carried around with said driving member, operating to yield in one phase and reassert itself in the next phase, when the driving and driven members are rotating at different speeds, connections between said device and the driven member for rotating the latter during the first phase, and other connections for rotating the latter in the same direction during the second phase.

1,461,559. POWER-TRANSMISSION APPARATUS.
JOHN REECE, Boston, and FRANKLIN A. REECE, Brookline, Mass., assignors to Reece Transmission Company, Boston, Mass., a Corporation of Maine. Filed Jan. 25, 1922. Serial No. 531,593. 9 Claims. (Cl. 74—34.)

1. A variable speed transmission apparatus comprising in combination, a rotating driving member, a yielding and reasserting device carried on said driving member, a rotatable driven member, a train of connections, between

said device and the driven member, including a one-way control means controlling the same, whereby rotation is transmitted through said device, in one direction only, to

the driven member, and a second such device and connections for transmitting to the driven member when the first device is not transmitting.

1,461,560. VALVE TAPPET FOR INTERNAL-COMBUSTION ENGINES. GEORGE R. RICH, Los Angeles, Calif. Filed Sept. 23, 1922. Serial No. 590,026. 9 Claims. (Cl. 123—90.)

1. A valve tappet, comprising a tappet body and a separate tappet head swiveled thereto on a line running crosswise of an associated cam shaft, whereby the head may adjust itself to engage the cam squarely across its face.

1,461,561. RECOIL GUN. HEINRICH ROMBERG, Dusseldorf, Germany, assignor to the Firm Rheinische Metallwaren- und Maschinenfabrik, Dusseldorf-Derendorf, Germany. Filed June 28, 1921. Serial No. 481,062. 2 Claims. (Cl. 89—37.)

1. The combination of a recoiling barrel, a cradle therefor, trunnions for the cradle, a platform for sup-

porting the cradle and provided with bearings to which the trunnions may be attached and an intermediate member insertable between the platform and cradle and connected to the trunnion and bearings.

1,461,562. COTTON-CLEANING MACHINE. ELWIN HOLBROOK ROONEY, Providence, R. I. Filed Apr. 28, 1920. Serial No. 377,180. 7 Claims. (Cl. 19—105.)

4. In a machine of the character described, the combination of a cleaning cylinder, means to deliver the stock thereto, means to co-act with the cylinder to effect the cleaning of the fibre and means to transfer the fibre from said cylinder comprising means for direction air currents tangentially to the circumference of the cylinder into contact with the fibres and in opposed relation and a transfer chute having an entry opening into which the opposed air currents converge.

1,461,563. WARE-MOLDING APPARATUS AND PROCESS. VICTOR E. SCHMIEDEKNECHT, Louisville, Ky. Filed Oct. 13, 1922. Serial No. 594,392. 6 Claims. (Cl. 25—27.)

1. That process of forming articles of plastic material which consists in spreading the material over a die through a recticulated depth gauge, striking off the excess material above the depth gauge, removing the depth gauge, bringing an upper die into contact with said material and forcing said dies toward each other.

1,461,564. BUMPER. LEWIS F. STAFFORD, Chicago, Ill., assignor to Stafford Spring Guard Co., Chicago, Ill., a Corporation of Illinois. Filed Nov. 21, 1921, Serial No. 516,729. Renewed May 29, 1923. 6 Claims. (Cl. 293—55.)

1. A bumper comprising an impact member, arms extended therefrom for attachment to a vehicle, a supplementary member having means for attachment to a vehicle and the central portion whereof extends parallel and adjacent the corresponding portion of the impact member, and an element of greater width than the impact member interposed between the latter and said supplementary supporting member and secured to said members.

1,461,565. ATHLETE'S MEDAL. CHARLES J. VEITE, Waterbury, Conn. Filed Dec. 28, 1922. Serial No. 609,459. 6 Claims. (Cl. 40—1.6.)

1. In an athlete's medal, a disk having a plurality of perforations, and a plurality of ornamental panels adapted to be detachably secured in said perforations to indicate the achievements of said athlete in various branches of sport or other activities.

1,461,566. BAFFLE BLOCK AND COMBUSTION-CHAMBER TOP. RUFUS D. WADLEIGH, Old Town, Me. Filed Apr. 30, 1921. Serial No. 465,714. 2 Claims. (Cl. 110—99.)

1. A baffle block consisting of the combination of a frame; a plurality of non-combustible brick, each having a transverse slot upon one of its faces; bolts passing through said slots and the sides of said frame; and means of detachably hanging said blocks to an overhead support.

1,461,567. FLOUR SIFTER. HARRIETT V. WHEELER, Chicago, Ill. Filed Oct. 5, 1921. Serial No. 505,486. 7 Claims. (Cl. 83—60.)

1. A sifter utensil comprising a container open at its end and adapted to be endwise reversed, a reversible sifter and a rotary beater therein, a measuring cup and closure fitted over the open end of said container, said measuring cup and closure embracing a closed end por-

tion of greater diameter than the container and a tapered portion which telescopes in the open end of the

container, and a handle for the container positioned within the circumferential outline of the larger diameter of the measuring cup.

1,461,568. TELEGRAPHIC RECEIVING INSTRUMENT. CHARLES ADAMS-RANDALL, New York, N. Y. Filed Sept. 27, 1920. Serial No. 412,944. 5 Claims. (Cl. 178—100.)

1. In a telegraphic receiving instrument, the combination of an electro-magnet; an armature for said magnet; a second electro-magnet; a second armature for said last named magnet; separate pivots for said armatures; a vertical pivot around which said second magnet may revolve to adjust its attraction for said second armature; a spring to hold said second magnet in its new position after having been moved around said vertical pivot; a lever mounted on the pivot of said second armature; an adjusting screw for one end of said lever; and a spring located between said first named armature and the other end of said lever, substantially as described.

1,461,569. CIRCLE-GAUGING INSTRUMENT. HERBERT J. ADAMS, Battle Creek, Mich. Filed June 7, 1920, Serial No. 387,241. Renewed May 28, 1923. 19 Claims. (Cl. 33—177.)

6. In a circle gauging instrument, the combination of a framework embracing right and left guides and a chan-

nel in line directed midway between the guides; a normally straight flexible bar and a pair of arms fastened to its ends and projecting perpendicularly therefrom and provided with lugs affording them sliding engagement with the guides for carrying the arms towards each other and so guided throwing the bar into uniform curves upon its being sprung, for gauging and ruling circles in series of limited range; a transverse plate and means affording it sliding engagement along said channel and for stopping it thereon and releasing it; a pair of lever arms pivoted to the channel and connected with the arms by a pair of rods, said lever arms being slidably confined in right and left openings in said trans-

verse plate adapting them for being actuated by movement of the plate for moving the arms and curving the bar; a clip adapted to impinge on the flexible bar midway its length; a stay bar having one end vertically pivoted to the clip; a curved guide fastened to the frame clear of the swing of the arms and centering at said midway point; guide lugs on the stay bar affording it sliding engagement with said curved guide, said stay bar being adapted upon downward pressure thereon for steadying the flexible bar on the drafting board and for being swung to clear either side of the flexible bar either in straight or curved form; substantially as described and shown.

1,461,570. FILING DEVICE. ALBERT A. AINSWORTH, Brooklyn, N. Y. Filed Apr. 5, 1918. Serial No. 226,865. 9 Claims. (Cl. 129—16.7.)

1. A folder of the vertical filing type, one of the leaves thereof having gummed tabs formed therein for holding a series of record sheets in laterally extended order, said tabs being joined at their ends to the leaf.

5. A filing folder formed of sheet material and having a plurality of series of record sheet-holding means arranged to hold a plurality of series of record sheets in a superposed flat and laterally extended position between the leaves of the folder.

1,461,571. CONTROL SYSTEM. ERNST F. W. ALEXANDERSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 23, 1920. Serial No. 368,196. 23 Claims. (Cl. 171-119.)

1. In an electric system, a source of alternating current, a motor load supplied thereby, and means responsive to the characteristics of the motor load for indicating directly the degree of stability of the motor load.

1,461,572. ACETYLENE LAMP. JOHN M. BROCK, Brooklyn, N. Y. Filed June 23, 1920. Serial No. 391,107. 3 Claims. (Cl. 240-1.)

1. A lamp comprising a burner tube provided with an internal burner-receiving surface; a burner having a securing portion including a surface adapted to conform with the internal burner-receiving surface of the tube and to be disposed within the tube; said burner having a portion constituting a shoulder which extends beyond a marginal edge of the burner tube when the burner is disposed therein; and a member disposed on the outer surface of the burner tube back of the shoulder on the burner, said member being adapted to engage the shoulder on the burner when being removed, whereby separation of the member and the burner tube will also effect removal of the burner from within the tube.

1,461,573. FRICTION CLUTCH. ARTHUR B. BROWNE, Detroit, Mich.; Anna H. Browne executrix of said Arthur B. Browne, deceased. Filed Oct. 16, 1920, Serial No. 417,351. Renewed Sept. 14, 1922. Serial No. 588,289. 19 Claims. (Cl. 192-69.)

1. A clutch comprising a shaft, a main plate irrevolvably mounted thereon, a pressure plate, a driving disk between the plates, direct acting spring means arranged

to urge the main plate and pressure plate together to frictionally clamp the disk, and a releasing lever inde-

pendent of the spring means and pivoted on the main plate and arranged to act on the pressure plate to move the plates apart to release the clutch.

1,461,574. CAMPING TRAILER. MEYER CAPLAN, Brooklyn, N. Y. Filed Aug. 23, 1922. Serial No. 583,810. 3 Claims. (Cl. 296-23.)

1. In a trailer, a portable body, means associated with said body to form sleeping compartments at each side thereof, said means comprising a bottom member hinged to the lower side of the body, end members hinged to said bottom member, a side member hinged to said bottom member, a top member hinged to the body near the upper end thereof, means associated with said end members and with said top member for relatively positioning said members in compartment forming position, and means associated with said end members and with said side member for releasably holding said members in compartment forming position.

1,461,575. SHIP PROPULSION SYSTEM. FREDERIC H. CLOUGH, Hillmorton, near Rugby, England, assignor to General Electric Company, a Corporation of New York. Filed Nov. 8, 1920, Serial No. 422,630. Renewed May 10, 1923. 4 Claims. (Cl. 172-8.)

1. In an electric power system an adjustable speed generating machine of the synchronous type, a load

driving dynamo electric machine supplied thereby, and means for controlling the excitation strength of one of said machines comprising a series commutator type torque motor connected to respond to generator voltage and a reactor in circuit with said torque motor substantially to compensate any tendency of the current through said torque motor to change with changes in generator voltage due to changes in speed.

4. An electric ship propulsion system comprising an adjustable speed synchronous generator, a propeller, a propeller driving motor connected to the generator mains, and means for controlling the strength of the generator excitation comprising a series commutator type motor connected across the generator mains, a reactor in series with said commutator motor and means for changing the reactive effect of the reactor in accordance with changes in the current supplied to the propeller driving motor to increase the reactive effect with increases in motor current and decrease the reactive effect with decreases in motor current.

1,461,576. SHIP-PROPULSION SYSTEM. FREDERIC H. CLOUGH, Hillmorton, near Rugby, England, assignor to General Electric Company, a Corporation of New York. Filed Jan. 29, 1921. Serial No. 441,029. 4 Claims. (Cl. 172-8.)

1. An electric ship propulsion system comprising an adjustable speed prime mover, a synchronous generator driven thereby, an alternating current propeller driving motor connected to be supplied by said generator, means for regulating the field strength of said generator, and means for operating said regulating means comprising a series commutator type torque motor connected to exert a torque proportional to the current supplied to the motor.

1,461,577. BALING PRESS. THOMAS COOK, Stalybridge, England. Filed July 15, 1920. Serial No. 396,534. 4 Claims. (Cl. 100-121.)

1. In a press, a vertical press chamber having vertical slots in its sides, a press platen provided with arms

which project laterally through the said slots, lower guide sheaves carried by the said arms, upper guide sheaves carried by the press chamber, flexible connections secured at one end and passing over the said sheaves, fusee drums having the free ends of the flexible connections secured to their larger end portions, and means for revolving the fusee drums simultaneously, and thereby raising the platen with a constantly increasing pressure.

1,461,578. MACHINE FOR REMOVING AND REPLACING METAL PARTS OF TRAIN-PIPE COUPLINGS. WILLIAM D. FAIDLEY, Jr., Clifton Forge, JOHN W. MORRIS, Iron Gate, and SAMUEL A. PATTERSON, Clifton Forge, Va. Filed Dec. 27, 1921. Serial No. 524,910. 13 Claims. (Cl. 29-88.2.)

1. In a machine of the class described, the combination of a hose support, fittings, carriers arranged at opposite sides of said support and movable toward and from the same, and means between the support and the carriers for compressing clamps about the hose.

1,461,579. GEAR LOCK FOR COTTON TRAMPERS. THADDEUS S. GRIMES, Columbus, Ga., assignor to Lummus Cotton Gin Company, Columbus, Ga., a Corporation of Georgia. Filed June 12, 1922. Serial No. 567,725. 3 Claims. (Cl. 74-7.)

1. In a gear lock, the combination with a main operating gear, a working gear, and an intermediate idler, the working surface of said main operating gear being interrupted by a stop surface, of a locking notch in said idler, and a pawl to engage said notch and be held therein by said stop surface.

1,461,580. APPARATUS FOR SEPARATING ROLLED SHEET-METAL PLATES. JOHN A. HELLSTROM, Wheeling, W. Va. Filed Jan. 28, 1921. Serial No. 440,676. 7 Claims. (Cl. 29-17.)

7. An apparatus for separating rolled packs of metal sheets, comprising means for feeding sheets step by step,

dies for corrugating the sheets one corrugation at a time, means for hammering the corrugations, and die

gauges for preventing sideways moving of the pack while being corrugated, whereby the pack is fed straight through the hammering mechanism.

1,461,581. ORNAMENTAL FABRIC. CAPTOLIA JENKINS, Guthrie, Ky. Filed July 11, 1921. Serial No. 483,919. 1 Claim. (Cl. 2—187.)

An ornamental fabric having disks, each disk being in a single piece and provided with a plurality of openings therethrough equidistantly spaced from the center of the disk and from each other and relatively close to the margin of the disk, each disk aside from the openings therethrough being substantially imperforate, connectors of textile material for the disks, said connectors in pluralities passing through each opening, each connector being a strand having its ends ornamentally connected together, and the connectors being in groups to present the appearance of endless elements substantially in checkered relation with the disks.

1,461,582. CALF WEANER. EMANUEL WILLIAM NEDVED, Milbore, S. Dak. Filed Mar. 5, 1920. Serial No. 363,426. 1 Claim. (Cl. 119—131.)

A calf weaner comprising an elongated longitudinally tapering transversely curved sheet metal shield, a portion of the rearward edge of said shield being cut away

to expose the upper part of the face of the wearer, relatively wide rearwardly extending side plates formed by said cut away portions, a longitudinally curved angle member secured to the forward end of said shield, upstanding spurs carried by said member, attaching means pivotally connected to the side plates adjacent their rear ends, and said side plates serving to prevent lateral displacement of the shield.

1,461,583. SHADE-ROLLER FIXTURE. PETER A. PERSE, Jr., Pueblo, Colo. Filed Apr. 14, 1921. Serial No. 461,186. 6 Claims. (Cl. 156—28.)

4. A shade roller fixture comprising a sectional casing having its lower portion cut away, a spool mounted in the casing, a socket at one end of the spool, ratchet teeth on the socket, arms at opposite ends of the casing pivoted thereto, one of the arms being curved and provided with a pawl in cooperative relation with the ratchet teeth, a tie rod connecting the free ends of the arms, and an operating cord adapted to wind upon the spool and directly engageable with said tie rod to disengage the pawl from the ratchet teeth when a lowering of the shade is desired.

1,461,584. PACKAGE-TYING DEVICE. LAWRENCE R. SANGSTON, Loveland, Colo. Filed Aug. 15, 1922. Serial No. 581,977. 3 Claims. (Cl. 24—18.)

1. A fastener for a binding element having an arm for attachment to said element, an arm substantially at right angle thereto having a fastening hook for said element at one end and a guide member for the element at the other end, said hook and element being on opposite sides of the first arm, and cross arms extending to the first mentioned arm and one from said hook and one from said guide member to reinforce the hook and guide member.

1,461,585. STATIONERY LABEL. MATTHEW RICHARD SCANLAN, Liverpool, England. Filed Nov. 3, 1919. Serial No. 335,478. 1 Claim. (Cl. 40—2.)

The combination of a label adapted to have an end thereof bent on itself to form a loop, a detachable clip

on the looped end of said label, a set of lugs of said clip embracing a portion of said label so that said clip will be attached to said label independent of the looped end of said label, and a second set of lugs bendable independent of the other set of lugs to embrace and hold the end of said label in loop formation, said label having an enlarged end to prevent end withdrawal when the label is in applied position.

1,461,586. LEVEL-WIND FISH REEL. WILLIAM SCHMID, Coldwater, Mich. Filed July 31, 1922. Serial No. 578,559. 13 Claims. (Cl. 242—84.4.)

1. In a fish reel structure in which a spool revolves, reel heads, frame parts connecting said reel heads and cooperating therewith in forming said structure, one of said frame parts forming a guard, and a level wind mechanism in the guard of the frame part adapted to level wind a line on the spool.

1,461,587. EGG CASE. HENRY G. STUEMKE, Good Thunder, Minn. Filed Oct. 8, 1921. Serial No. 506,538. 1 Claim. (Cl. 217—5.)

In a device of the character described, opposed sections, guiding members secured to the ends of the sections, rods positioned within the guiding members and having right angled ends adapted to engage the ends of the guiding members to restrict movement of the sections with respect to each other, and coiled springs mounted on the rods and disposed between the sections, the ends of the coiled springs engaging the sections to normally urge the sections away from each other.

1,461,588. WINDOW SCREEN. CHARLES W. TRICKEY, McGrath, Minn. Filed Aug. 11, 1921. Serial No. 491,519. 5 Claims. (Cl. 156—39.)

3. Means for screening a window, the same comprising a supporting frame including longitudinal strips having their end portions upstanding, clips secured at one end to the sill of the window frame and engaging the strips of the supporting frame, guide and spring rollers mounted in the upturned ends of the strips, a screen passing around the guide roller and wound upon the spring roller and detachably engaging the lower rail of the sliding sash, guide strips applied to the side of the window frame and engaging the vertical edge portions of the

screen to exclude insects, a cover for the spring and guide rollers having an offstanding portion along one edge and provided with openings adjacent the offstanding portion to receive the said clips, keepers on the offstanding portion

of the cover receiving said clips, and a tongue projecting from the offstanding portion of the cover and adapted to receive a fastening whereby the parts are made secure to the sill of the window frame.

1,461,589. CAR REPLACER. JOHN A. VEAZEY, Youngstown, Ohio. Filed Dec. 5, 1922. Serial No. 605,073. 1 Claim. (Cl. 104—262.)

A car replacer comprising a clamp member grooved in its under side to receive a rail and having a portion at one side formed in its top with a longitudinal groove to receive the flange of a car wheel, deflecting wheels mounted upon the member at one side of the grooves thereof to cause the flange of a car wheel to enter said grooves, the opposite side portion of the clamp member including a wing and a circular ear, and a replacing member having a depression at one end to receive said circular ear to which it is pivotally connected, said replacing member comprising an inclined portion and an elevated portion, the two portions being separated by means of a shoulder which is longitudinally inclined to effect a lateral movement of a car wheel as the same mounts the inclined portion.

1,461,590. WALL CONSTRUCTION. CURRY ORA WALKER, Detroit, Mich., assignor of one-third to Frank A. Maslen and one-third to Bernard E. Clark, both of Detroit, Mich. Filed July 24, 1922. Serial No. 576,968. 4 Claims. (Cl. 72—17.)

1. A building structure comprising a plurality of supporting members, wall boards secured to said members with their abutting edges having portions capable of movement, a reinforcing material extending across the joint at the abutting edges of said panels opposite the

portions capable of movement, and a surface coating of an elastic plastic material covering the reinforcing material and adhering to the wall boards on opposite sides of the

reinforcement, said surface coating and wall boards being capable of relative movement adjacent to their abutting edges.

1,461,591. GATE LOCK. EINO H. WAYRYNEN, East Lake, Minn. Filed Nov. 16, 1921. Serial No. 515,565. 4 Claims. (Cl. 292-48.)

1. In a gate or like swinging closure, upper and lower brackets disposed to extend over the top and beneath the bottom of the gate to prevent vertical movement thereof when closed, and latch elements carried by said brackets to engage opposite sides of the gate to secure the same against lateral movement when closed.

1,461,592. DEMOUNTABLE RIM. JACOB K. WILKENS, Muscatine, Iowa. Filed Oct. 27, 1922. Serial No. 597,317. 1 Claim. (Cl. 301-30.)

Means for securing the separable ends of a demountable rim, the same comprising an opening formed in one of the ends, a substantially U-shaped keeper on the end provided with the opening and having the open side adjacent the said opening, a locking slide mounted in the keeper and adapted to be moved to extend over said opening, a tongue projecting from the companion end of the rim and having a projection or lip adapted to enter the said opening and retained therein by the locking slide, and means for securing the locking slide in operative position.

1,461,593. HAND CAR. ALLEN B. WOODSON and WARHAM FERRIL, Clarksville, Tenn.; said Woodson assignor to said Ferril. Filed Nov. 11, 1922. Serial No. 600,305. 4 Claims. (Cl. 105-88.)

1. In a hand car, the combination with a platform having an opening therein and a driving axle disposed below the platform, of a crank shaft journaled on the platform and extending across the opening, manipulating elements operatively connected to the crank shaft, a gear carried by the crank shaft and rotatable within the opening in the platform and adapted to have rotation when the crank shaft is rotated, a gear loosely mounted on the driving axle and meshing with the first-mentioned gear and adapted to have rotation when the first-mentioned gear is rotated, and means for locking the second-mentioned gear to the driving axle when the said gear is rotated in one direction, so as to effect rotation of the driving axle.

1,461,594. ROTARY PRINTING MACHINE. JOSE M. ALMEDIA, Rock Springs, Wyo. Filed Dec. 22, 1921. Serial No. 524,242. 13 Claims. (Cl. 101-120.)

1. A printing machine having printing mechanism, means operable to dry the ink from a printed sheet consisting of a drum, a blotting sheet to surround and fastened adjacent one end to the drum, and latch means on the drum engageable with the sheet adjacent the other end of the sheet.

1,461,595. PIPE-THREAD PROTECTOR. HENRY W. AVERY, Cleveland, Ohio. Filed Oct. 13, 1921. Serial No. 507,481. 6 Claims. (Cl. 137-91.)

1. A pipe thread protector comprising a sleeve having an internal groove extending part way around it and having an opening communicating with said groove, and a locking key which lies partly in said groove, the diameter of said key being greater than the depth of the groove whereby the key will project into one of the spiral grooves of a threaded pipe upon which the sleeve is fitted.

1,461,596. RESONANCE DEVICE FOR BANJOS. FRANS R. L. BERGE, Port Angeles, Wash. Filed May 24, 1921. Serial No. 472,240. 6 Claims. (Cl. 84—270.)

4. As an article of manufacture an attachment for banjos and the like comprising a pair of arcuate wooden strips adapted to be engaged endwise with the inner face of the banjo head, a wire arranged within and strung to each of said strips, a thin wooden bar spanning the space between said strips, said bar having sector shaped heads with longitudinally arranged wire strings mounted on its inner face, a disk-like wooden plate to rest on the center portion of said bar and having a seat on its outer face to engage the inner face of the banjo stick, and set screws threaded through said disk like plate and engaging said bar for varying the pressure of the bar on said arcuate strips and thereby controlling the pressure of said members on the banjo head.

1,461,597. SOUND BOX. ARIZONIA Z. COATS, Newbern, Tenn., assignor of one-half to Elmer Headden, Newbern, Tenn. Filed Oct. 11, 1921. Serial No. 506,954. 1 Claim. (Cl. 274—35.)

A sound box of the class described composed of a cylindrical body the ends of which are equipped each with a sound conveying tube said body being constructed of detachably connected sections, a diaphragm mounted in each of said sections, a spacing ring arranged between said diaphragms, said ring being split and the ends thereof spaced apart, a sound arm extending through the opening in said ring and engaged with said diaphragms, and a needle holder connected with said sound arm.

1,461,598. EXTENSION FRAME FOR FORDSON TRACTORS. WILLIAM JEROME WYLIE, Columbia, Miss., and CLARENCE WINSTON COOPER, Oxford, Ala.; said Cooper assignor to George Willard Green, Columbia, Miss. Filed July 3, 1922. Serial No. 572,552. 1 Claim. (Cl. 180—1.)

The combination with a tractor comprising a rear axle casing, rear wheels carried by the casing, a front axle,

front wheels movably carried by the front axle for steering, and steering mechanism carried by the front axle and operatively connected with the front wheels—of means for associating and connecting the instrumentalities specified, to form a portable power plant, said means embodying a substantially U-shaped carrying frame, mechanism for connecting the front axle to the forward portion of the carrying frame for swinging movement in a vertical plane and in spaced relation to the forward portion of the frame work of the tractor, means for connecting the axle casing of the tractor to the rear portion of the carrying frame, means for securing the front portion of the frame work of the tractor to the carrying frame at a point intermediate the front and rear ends of the carrying frame and far enough from the forward end of the carrying frame to provide ample space for driven machinery to be located between the frame work of the tractor and the forward end of the carrying frame, means for supporting the machinery to be driven on the carrying frame between the frame work of the tractor and the forward end of the carrying frame, and an operating device for the steering mechanism, said device being extended backwardly to a point to the rear of the means which connects the frame work of the tractor with the carrying frame, thereby to permit said device to be operated by the steering element of the tractor.

1,461,599. MANIFOLDING ATTACHMENT FOR TYPEWRITERS. MALCOLM L. COSSITT, Alameda, Calif., assignor to Manifold Impressions Corporation, Carson City, Nev., a Corporation of Nevada. Filed July 3, 1922. Serial No. 572,683. 8 Claims. (Cl. 197—153.)

1. A manifolding attachment for typewriters comprising a movable arm mounted upon a stationary portion of the machine frame and thence extending above and clear of the platen carriage to the region of type impact; a manifolding member carried by said arm and adapted to be moved thereby into and out of functional position in the line of type impact, between the sheets of paper to be typed; and means dependent upon the operation of the machine in typing, for varying the surface point of the manifolding member exposed to the type impact.

1,461,600. COMBINED LIGHT AND FIREARM. SYLVESTER P. COTTRELL, Buffalo, N. Y. Filed July 8, 1922. Serial No. 573,676. 20 Claims. (Cl. 42—1.)

1. A combined light and firearm comprising an enclosing casing, a lamp arranged in the front part of said casing,

a battery arranged in the rear part of the casing, and a cartridge cylinder arranged in the casing between said lamp and said battery.

1,461,601. ELEVATOR. THOMAS C. CRAIG, Waterbury, Conn. Filed Aug. 24, 1920. Serial No. 405,587. 3 Claims. (Cl. 187-19.)

3. In combination with an elevator car and driving mechanism carried thereby, said mechanism including an electric motor, a circuit for said motor, a controller connected with said circuit and said car, conducting elements adapted to be mounted in the elevator shaft, a swingingly mounted trolley bracket carried by the car, wheels mounted on the bracket and adapted to engage the conductors when the bracket is swung to operative position, a lever, a rod having a terminal crank, a link connected at one end to said crank and having its outer end connected to said bracket, a second link connected at one end to a rod, and a third link connected with one end to said lever and at its other end to the second link, whereby said bracket is swung to operative or inoperative position on movement of said lever; a brake for the driving mechanism, said brake comprising a brake wheel mounted on a drive shaft, a brake shoe, to cooperate with said brake wheel, and links connecting said brake shoe and lever, whereby when said bracket is moved to break the circuit of the motor, said brake will be automatically applied.

1,461,602. FITTING FOR REVOLVING CHAIRS AND THE LIKE. ROBERT K. DAWSON, Guelph, Ontario, Canada. Filed June 13, 1921. Serial No. 477,073. 9 Claims. (Cl. 155-138.)

1. Means for connecting the legs of chairs and the like including a plate of relatively thin material adapted to engage said legs, cylindrical projecting parts extending outwardly from said plate and formed integral therewith, a reinforcing member of thicker material adapted to engage said plate at the juncture of said projecting parts with said plate, and means for drawing said member into clamping engagement with said plate.

1,461,603. GLASS-DRAWING APPARATUS. CHARLES DONALDSON, Augusta, Kans., and CHARLES DAY, Okmulgee, Okla. Filed June 24, 1921. Serial No. 480,211. 11 Claims. (Cl. 49-17.)

11. In apparatus of the class described, a truck supported for travel, spaced racks upon the truck, a shaft, gear wheels carried by the shaft and meshing with the rack, means whereby the shaft may be rotated, means for holding the shaft against rotation whereby to hold the same in positions of shifting adjustment effected through its rotation and the meshing of the gear wheels with the racks, a sleeve shaft upon the first-mentioned shaft rotatable independently thereof, means whereby the sleeve shaft may be rotated, means for holding the sleeve shaft against rotation and thus maintain it in positions of adjustment, a supporting member extending from the sleeve shaft, pot supporting means carried by the said member, the said supporting member being located at one side of the sleeve shaft, and counterbalancing means located at the other side of the said shaft.

1,461,604. HEADLIGHT MECHANISM. SAMUEL E. DOUGLASS, Raleigh, N. C. Filed Mar. 28, 1922. Serial No. 547,488. 2 Claims. (Cl. 240-62.)

1. In a headlight mechanism, in combination with a vehicle steering rod; a lamp, a shaft to mount the lamp, means to mount the shaft, said shaft having lugs extending therefrom in opposite directions, said lugs being disaligned vertically, said steering rod having a connection extending upwardly therefrom and a connection depending therefrom, flexible elements in crossed relation and non-contiguous, said elements extending one from each lug and being secured one above and one below and respectively to said connections.

1,461,605. SPARK ARRESTER. SAMUEL E. DOUGLASS, Raleigh, N. C. Filed Apr. 10, 1922. Serial No. 551,096. 1 Claim. (Cl. 183-97.)

A spark arrester comprising, in combination with a smoke stack, a vertically disposed flat dividing plate arranged within and extending diametrically of the stack and having its side edges engaging the inner walls of the stack, a pair of flat deflecting plates extending upwardly in diverging relation from the upper edge of the dividing plate and having their side edges contacting with the inner surface of the stack, the deflecting plates being perforated and terminating at their upper ends in

return elbows which overlie and engage the upper edge of the stack and which are of a length equal to the width of the deflecting plates, the inner end of the return elbow having openings coextensive in length with the width of the deflecting plates and having their end walls curved to engage the inner surface of the stack

and the outer ends of the elbows terminating in reduced nipples, discharge pipe connected to said nipples, and means passing through the dividing plate and the smoke stack, said means in addition to the engagement of the deflecting plates and elbows with the stack preventing the spark arrester from having any movement with respect to the stack.

1,461,606. DRAFT-CONTROLLING DEVICE. JOHN ELICK, Centralia, Wash. Filed Sept. 21, 1921. Serial No. 502,208. 1 Claim. (Cl. 110—163.)

An attachment for steam generators including a smoke box, the forward flue sheet, the flues, and an exhaust pipe, comprising a diaphragm formed of upper and lower horizontal portions extending in parallel relations and a portion directed at an angle to the longitudinal planes of the horizontal portions, the upper horizontal portion adapted to engage the flue sheet above the flues and the lower horizontal portion apertured to receive the exhaust pipe, a supporting rod extending transversely of the smoke box and above the line of the lower horizontal portion of the diaphragm, and a controlling element rotative with the rod and bearing against the forward edge of the diaphragm when in lower position and limited in its movement in one direction thereby.

1,461,607. MINER'S LAMP CLIP AND STAY. NEWTON FARLEY, Lillybrook, W. Va. Filed Apr. 28, 1922. Serial No. 557,081. 3 Claims. (Cl. 240—60.)

1. Attaching means for a miner's lamp comprising a clamp including a resilient bar having spaced arms projecting therefrom, and a holder comprising complementary members hingedly connected at one end and having

hinged connection intermediate their ends to the respective arms whereby the last mentioned hinge connection and resiliency of the bar enable the connected ends of

the holder members to move across a line passing through the point of connection of the holder members to the arms.

1,461,608. TOOL HOLDER. TIMOTHY C. FOLEY, Reno, Pa. Filed Apr. 18, 1922. Serial No. 554,676. 14 Claims. (Cl. 90—52.)

14. In a tool holder, the combination with a planer head, of a body portion carried thereby having means for holding a transversely disposed tool with a cutting edge at each end in a position at the bottom of the body portion, and other means located at each side of said tool and carrying tool holders at their lower ends with the two tools arranged in a substantially horizontal position, whereby the three tools are adapted to operate simultaneously on the inside and outside respectively of a shoe.

1,461,609. COLLAPSIBLE-TUBE CLOSURE. GERALD E. FORCE, New York, N. Y., assignor to Helmet Cap Company, New York, N. Y. Filed Apr. 11, 1921. Serial No. 460,194. 7 Claims. (Cl. 221—50.)

1. A collapsible tube or similar receptacle, having a discharge orifice surrounded by an externally threaded collar, a guide pivoted to and operable to positions overlying and lateral of the collar, said guide being threaded, its threads constituting a continuation of those on the collar, and a cap carried by the guide and adapted to be disposed by the collar in a position for engagement with the threads of the collar.

- 1,461,610. WINDOW-OPERATING MECHANISM. LAURENCE M. FOSS, Amesbury, Mass. Filed July 3, 1922. Serial No. 572,634. 9 Claims. (Cl. 268-4.)

1. Window-operating mechanism comprising, in combination, a frame; a window slidable in guides in the frame; a stud fixed to the window substantially equidistant from the guided edges thereof; a traveller having opposed parallel pushing edges contacting with said stud; and traveller-operating means movably connecting the traveller with the frame, maintaining said edges substantially at right angles with the path of movement of the window, and organized to cause a combined end-wise and edgewise movement of the traveller, and thereby slide the window in the frame, the said traveller edges being in sliding and pushing contact with the window stud.

- 1,461,611. GLOBE SUPPORT FOR ELECTRIC LIGHTS. JOHN W. FRENCH, New Rochelle, N. Y. Filed Mar. 12, 1921. Serial No. 451,706. 4 Claims. (Cl. 240-111.)

1. In combination, a globe and a light support, means for detachably securing the same together comprising opposed pairs of horizontally arranged levers encircling the globe and pivoted intermediate their ends to the light support, clamping members carried by the outer ends of the levers and detachably engaging the globe, means for simultaneously operating the levers of each pair to rotate them in opposite directions and to simultaneously disengage the clamping members.

- 1,461,612. TOILET. JOHN F. GEIBEL, Buffalo, N. Y., assignor to Kaustine Company, Inc., Buffalo, N. Y. Filed Apr. 26, 1920. Serial No. 376,506. 10 Claims. (Cl. 4-20.)

1. In a toilet, the combination of a tank, a toilet bowl arranged above said tank, a drop tube connecting said tank and said toilet bowl and comprising two sections which are arranged to permit said bowl to be turned to

different positions with respect to said tank, an agitator in said tank, an actuating rod connected to said agitator and having a portion arranged adjacent to said bowl,

and means on said agitator for normally holding said agitator in different positions, depending on the position of said bowl relatively to said tank.

- 1,461,613. VENDING MACHINE. WOODLAND H. GILBERT, St. Paul, Minn. Filed Apr. 25, 1922. Serial No. 556,380. 25 Claims. (Cl. 234-1.)

3. A vending machine including a container for a commodity, a closure therefor, means to lock the closure in container-closing position and adapted to be unlocked by a key of sheet material to permit removal of the commodity, and means adapted upon unlocking of the closure to mark said key sheet with the charge for the removable commodity.

20. A vending machine including a container for a commodity, a closure therefor, means to lock the closure in container-closing position and adapted to be unlocked by a key-member to permit removal of the commodity, means adapted upon unlocking of the closure to mark the key member with the charge for the removable commodity, and means adjustably to mount the marking means whereby the position of the marked charges on the key member may be altered in a plurality of directions.

- 1,461,614. CONTINUOUS STRAW GAS RETORT. GEORGE H. HARRISON, St. Paul, Minn., assignor to Manufacturers Chemical Company, Newport, Minn., a Corporation. Filed Apr. 6, 1921. Serial No. 458,964. 5 Claims. (Cl. 48-111.)

1. In a straw gas apparatus, a furnace, one or more cylindrical gas retorts extending horizontally through

the furnace, a horizontal cylindrical feeding tube in central line with each one of the retorts and having a feed hopper opening into its upper side, a perforated piston in said feeding tube and means reciprocating the piston below the hopper; the discharge end of each retort having a comparatively long delivery tube extending axially from said end, a spiral conveyor in said delivery tube and means on the outer end of said conveyor for imparting rotation to it.

1,461,615. MEAT-BLOCK CLEANER. STEPHEN HERMANOWICH, Ellwood City, Pa. Filed May 15, 1922. Serial No. 561,005. 3 Claims. (Cl. 144-2.)

1. A meat block cleaner comprising a head member formed with a polygonal shaped opening and a recess communicating with the opening, a washer mounted in said recess, a driven shaft having a polygonal shaped lower end engaging in the polygonal shaped opening of the head member to provide for the bodily rotation of the latter, a securing element extending up through said washer and engaging in the polygonal shaped end of said shaft, and a disk secured to the lower face of said member and inclosing said washer.

1,461,616. TIRE TOOL. WILLIS W. HILEMAN, Jonesboro, Ill., assignor of one-half to Charles H. Bruchhauser, Anna, Ill. Filed Feb. 20, 1922. Serial No. 537,900. 2 Claims. (Cl. 157-1.)

1. A tire tool of the character specified comprising an operating lever, arms pivoted at their inner ends to an end portion of the operating lever at different points and having rim engaging elements at their outer ends, one of said arms being of sectional formation, the outer section having a longitudinal slot and a plurality of teeth along an edge, a pin carried by the inner section and passing through said slot and pivoting the outer section to the inner section, a stop on the inner section to coact

with the teeth of the outer section to hold the latter in the required adjusted position, and cooperating means between the operating lever and one of the arms to hold the parts in adjusted position when the tool is in active service.

1,461,617. DECOY ANCHOR. RICHARD M. HILL, Spring Valley, Ill. Filed June 28, 1922. Serial No. 571,400. 2 Claims. (Cl. 43-3.)

1. A device of the character described formed from a single length of resilient wire bent intermediate its ends to define a normally open loop, an elongated shank and a relatively short arm, the loop being designed for engagement about the neck of a decoy, said shank terminating in an attaching eye carrying a swivel, and having its intermediate portion bent to define a hook, said arm being engageable within the hook to close the loop in encircling engagement upon the neck of the decoy, the free end of the arm constituting a handle and being angularly offset.

1,461,618. RECEPTACLE FOR THE STORAGE AND PRESERVATION OF USED PAINT BRUSHES. JAMES E. HOPKINS, South Orange, N. J., assignor of one-half to Allyn L. Wright, New York, N. Y. Filed May 4, 1922. Serial No. 558,390. 3 Claims. (Cl. 206-16.)

1. A liquid tight receptacle, a removable wire frame dividing the interior of the receptacle into compartments of differing size adapted to support the brushes vertically, said frame having a perforated bottom supported above the bottom of the receptacle.

1,461,619. SEWING MACHINE. JOHN KIEWICZ, Boston, Mass., assignor to The Reece Button Hole Machine Company, Boston, Mass., a Corporation of Maine. Filed Sept. 18, 1919. Serial No. 324,288. 8 Claims. (Cl. 112-252.)

1. In a sewing machine adapted to sew a short seam and then come to rest, the combination with stitch-forming mechanism including a throat-plate, of a clamp plate on which the work is supported, means for moving the clamp plate and stitch forming mechanism relative to each other, said clamp plate having a shearing edge on its work-receiving face situated at one side of the throat-plate, a cutting member pivotally mounted on the clamp plate and having a cutting edge, turning move-

ment of the cutting member carrying said cutting edge across the throat-plate so that it engages the threads extending therefrom and pulls off a length of thread and

then across the shearing edge thereby to sever the thread, and means operative at the end of the stitching operation to actuate said cutting means.

1,461,620. FLUID MOTOR. WILLIS KNAPP, Salt Lake City, Utah. Filed Mar. 31, 1921. Serial No. 457,286. 8 Claims. (Cl. 253-136.)

1. In a rotary tool structure, a casing having an outlet, a fluid driven motor in the casing, an inlet for fluid under pressure entering the casing, and a plate or guard in overlying relation to the rotor and covering a portion of the same adjacent the inlet.

1,461,621. MILK-BOTTLE HANDLE. LEOPOLD KRANZL, Seattle, Wash. Filed July 21, 1922. Serial No. 576,489. 12 Claims. (Cl. 215-100.)

1. In a carrier, article gripping elements, and diverging guides slidably receiving similar ends of said elements, said guides serving to relatively increase and decrease the spacing of the elements as the latter are moved longitudinally of the guides.

312 O. G.—25

1,461,622. PUMPING SYSTEM. HARRY E. LA BOUR, Chicago, Ill. Filed May 2, 1921. Serial No. 466,195. 6 Claims. (Cl. 103-113.)

1. In a self-priming pumping system, connections providing a complete circuit, means for circulating a medium through said circuit, mixing means and separating means located at spaced points in said circuit, a supply pipe associated with said mixing means and a discharge pipe associated with said separating means, and control means capable of varying the flow capacity of the portion of the circuit leading from the separating to the mixing means but incapable of completely interrupting the flow.

1,461,623. ADJUSTABLE CAP. MAURICE LEBOW, Baltimore, Md., assignor to Dorf & Company, Baltimore, Md. Filed Feb. 1, 1922. Serial No. 533,178. 2 Claims. (Cl. 2-106.)

1. A cap comprising a body having a contracted lower portion, a split band encircling and depending from said lower portion and secured intermediate its ends to the outer face of the back and to each of the sides of said lower portion thereby providing oppositely extending free end terminal portions positioned at the front of said lower portion, a strip depending from and arranged against the outer face of the front and a part of each side of said lower portion, said strip secured intermediate its ends for a portion of its length to the outer face of the front of said lower portion thereby providing said strip with rearwardly directed free end terminal portions, the free end terminal portions of said strip sliding directly against the inner face of the connected portion of said split band, the termini of the connected part of said strip being spaced from the termini of the connected part of said band, and means for adjustably connecting the free end terminal portions of the band together for varying the size of the cap and for inclosing the connected portion of said strip.

1,461,624. DUSTPAN. GEORGE W. LEWIS, Chicago, Ill. Filed June 17, 1922. Serial No. 569,096. 1 Claim. (Cl. 65-63.)

A device of the class described comprising a member adapted to be attached to the body of a dust pan and

outturned at one end with laterally opening seats in the outturned portion, perforated ears directed from the plate at the other end and in spaced relation, a combined support and handle bent from a section of resilient material to form spaced side portions and each side portion turned into a coil intermediate the ends to increase the resiliency and form stops to limit the downward movement of the pan, the free ends of the side portions being formed with oppositely directed portions to enter the apertures of the ears and the sides of the resilient member to enter said seats and retained in place therein by the resiliency of the handle member.

- 1,461,625. MARKING TICKET. ALONZO KIMBALL MARSH, New York, N. Y., assignor to A. Kimball Company, New York, N. Y., a Corporation of New York. Filed Oct. 7, 1922. Serial No. 593,037. 5 Claims. (Cl. 40—23.)

1. A marking ticket comprising a card divided by two transverse scores into three sections, means on the central section for engaging the material to be marked, and a soft wire stiffener extending longitudinally of the card across the scores whereby the ticket may be secured to the material to be marked by engaging the material with the central section, bending an adjoining section on the intermediate score back against the central section, and then bending these two sections and the engaged material on the other score back against the third section.

- 1,461,626. MIRROR SUPPORT. FRED H. MASON, Chinchilla, Pa. Filed May 25, 1921. Serial No. 472,491. 1 Claim. (Cl. 45—97.)

A support of the class described comprising an integral resilient clamping member having substantially parallel sides adapted to engage a post or support and provided with a plurality of spaced aligned notches, a nut having inwardly directed lugs slidable on said member, said lugs being adapted to positively engage and lock in said notches to hold said member in adjusted position, and means at the inner end of said member to further lock the support.

- 1,461,627. OIL FILTER. RICHARD S. MOORE and LEON B. JONES, Rockdale, Tex. Filed July 14, 1920. Serial No. 396,077. 2 Claims. (Cl. 210—48.)

1. An oil filter for stoves including a tapering receptacle the upper marginal edge of which is bent outwardly at right angles to provide a supporting ledge for supporting an oil can, a partition formed in said receptacle having its periphery integral with the upper end of the receptacle and being dished downwardly into the body of the

latter to provide a basin for primarily receiving oil dispensed from the oil can, a filter carrying support depending from said partition and discharging against the taper-

ing wall of said receptacle, and a feed pipe leading from said receptacle directly beneath said partition to carry off the oil from said receptacle.

- 1,461,628. MAGNETIC SPEEDOMETER. JOSHUA PATRICK, Detroit, Mich. Filed Dec. 1, 1921. Serial No. 519,211. 9 Claims. (Cl. 264—13.)

1. In a speedometer of the class described, a suitable hollow casing having an opening at its front side or end; a supporting plate secured to said casing and acting to close said opening; speed indicating mechanism located within said casing and supported solely and entirely by said supporting plate; and a driving shaft supported by said casing and operatively connected with an element of said speed indicating mechanism to drive the same.

- 1,461,629. SPARK PLUG. ALBERT SCHMIDT, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Corporation of Michigan. Filed Sept. 25, 1918. Serial No. 255,578. 15 Claims. (Cl. 123—169.)

1. A spark plug comprising an external shell or casing, tubular insulators located within said shell and permanently secured in place therein, a central electrode supported between the inner adjacent ends of said tubular insulators and extending above the upper end of said shell, an insulator surrounding the upper end of said

electrode, a dome surrounding the upper end of said electrode and said last mentioned insulator and the lower end of which abuts against the upper end of said shell or casing, and which dome is provided with a central hole through which said electrode extends, and a nut in engagement with the upper end of said electrode and which nut acts to hold said dome in place.

1,461,630. AIR-CLEANING DEVICE. CHARLES R. SHORT and ARTHUR L. CASH, Detroit, Mich. Filed Nov. 17, 1919. Serial No. 338,723. 9 Claims. (Cl. 183—36.)

1. In a centrifugal air cleaner, an elongated casing approximately circular in cross-section and having an air inlet opening at one end and an air outlet opening of less cross-sectional area than said casing at the other end thereof, and which casing is provided with a slot extending longitudinally and throughout the entire length thereof; and a spirally arranged member located within said casing and extending throughout a part only of the length thereof, and which member is adapted to impart rotary motion to air flowing through said casing; said spirally arranged member being located adjacent the inlet end of said casing whereby an internal chamber is provided adjacent the outlet end of said casing.

1,461,631. TEETER BOARD. MIKE SMERECHANSKI, Berwick, Pa. Filed Aug. 1, 1922. Serial No. 578,931. 1 Claim. (Cl. 46—22.)

In a teeter board of the type described, a base frame, a perpendicular standard mounted thereon, said standard being bifurcated to provide spaced side arms, a teeter board pivotally supported between said arms, a head block secured in the upper ends of said arms, and cushion springs mounted between the upper edge of the teeter board, and the head block and the lower edge of the standard teeter board and being anchored at their ends to the teeter board, standard and head block.

1,461,632. WASHING MACHINE. HOWARD F. SNYDER, Newton, Iowa, assignor to Maytag Company, Newton, Iowa, a Corporation of Iowa. Original application filed July 24, 1920, Serial No. 398,678. Divided and this application filed Sept. 2, 1921. Serial No. 498,113. 3 Claims. (Cl. 254—50.)

1. In a machine of the character described, a supporting casing having legs and a permanently open

bottom, operating means mounted upon the casing, a washing cylinder having trunnions extending from oppo-

site faces thereof mounted within the casing and pivoted thereon, and connections between the operating means and the cylinder for turning the cylinder on its pivots.

1,461,633. CARD GAME BOARD. JOHN H. STANSBURY, Norfolk, Va. Filed June 5, 1922. Serial No. 565,849. 10 Claims. (Cl. 46—56.)

1. The combination with a circular disc, and means for centrally supporting the same, of an annular series of radially disposed permanent magnets mounted on said disc, said magnets being arranged with similar poles directed alternately outwardly and inwardly, around the series, and an independent, freely movable body with duplicate indistinguishable ends, having a permanent magnet concealed therein, whereby, when said body is placed near said disc, the latter will be angularly displaced to an extent determined by the relative polarity of said body and adjacent disc carried magnetic.

1,461,634. RHEOSTAT AND THE LIKE. ERWIN R. STOECKLE, Milwaukee, Wis. Filed July 31, 1922. Serial No. 578,823. 10 Claims. (Cl. 219—48.)

1. A rheostat comprising a helically wound resistor whose axis lies in a circumferential groove formed by the co-axial superposition of a plurality of circular disks.

- 1,461,635. ENVELOPE. WALTER SZCZERBA, Newark, N. J. Filed May 20, 1922. Serial No. 562,476. 2 Claims. (Cl. 229—80.)

1. In an envelope of the type described, a central rectangular strip defining the front face thereof, foldable side flaps integrally joined to the central rectangular strip, a tongue projecting outwardly from each side flap and said flaps being longitudinally slitted at one side of the tongue adapted for interlocking engagement with each other, other integral flaps carried by the upper and lower ends of the said central strip and adapted to be folded backwardly upon the beforementioned side flaps and locking tongues carried by said flaps for securely retaining the flaps in interlocked engagement.

- 1,461,636. ATTACHMENT FOR STRINGED INSTRUMENTS. ELMER S. TANQUARY, Lawrenceville, Ill. Filed Apr. 14, 1922. Serial No. 552,486. 6 Claims. (Cl. 84—187.)

1. In a stringed instrument of the type in which the strings are adapted to be vibrated by the fingers of the performer, fretting means on the instrument, a stop device, a support attached to the instrument for holding said stop device normally out of contact with the strings but so mounted as to be bodily depressed and also rocked, to cause selected strings to engage the frets, by the arm or wrist of the performer without interfering with the freedom of movement of the fingers in playing the instrument.

- 1,461,637. COMBINED WINCH AND SUPPORT THEREFOR. ANDREW J. KARL, Sistersville, and BENJAMIN F. WEBB, Bens Run, W. Va., assignors to Webb Multispeed Winch Manufacturing Company, Sistersville, W. Va., a Corporation of West Virginia. Filed July 5, 1922. Serial No. 572,810. 7 Claims. (Cl. 254—186.)

1. In combination a support, a pair of standards carried thereby, a driven shaft mounted on the standards and extending outwardly from one of them, a driving element for said shaft positioned thereon near the other end thereof, a pinion fixed to the shaft, a revolvable drum including a pair of hubs loosely mounted on the shaft and further including a gear formed on one of the hubs and an inclosing means for the gear, one of said hubs extending on the extended end of said shaft, means connected with said extended hub for

manually operating the drum, drum actuating elements driven from said pinion and meshing with said gear and arranged in said inclosing means, and revolvable

supports for said elements, said supports connected together and loosely mounted on one of said hubs and said shaft.

- 1,461,638. FRUIT ELEVATOR. ALFRED Z. WELLS and JAMES M. WADE, Wenatchee, Wash. Filed Aug. 8, 1922. Serial No. 580,482. 15 Claims. (Cl. 198—26.)

1. In an apparatus for the purpose set forth, an elevating and lowering mechanism including a traveling carrier, and a delivery mechanism having as a part thereof a counterbalanced stop element and a spring controlled arresting element connected with each other and actuated from said carrier during the travel thereof.

15. In an apparatus for the purpose set forth, a delivery mechanism provided with stop and arresting elements, and means for pivotally supporting said elements, said stop element projecting rearwardly with respect to said arresting element and said arresting element provided with a pronged arresting member and an upwardly inclined arresting member, said elements resiliently connected together and said stop element provided with a counter-weight, and an actuating means for said elements depending from said stop element.

- 1,461,639. COTTON TRAMPER. WILLIAM D. WILSON and ADOLPH CULLANDER, Belzoni, Miss., assignors of one-third to Enoch Haga, Belzoni, Miss. Continuation of application Serial No. 318,020, filed Aug. 16, 1919. This application filed Jan. 13, 1921. Serial No. 436,997. 3 Claims. (Cl. 100—25.)

1. In a cotton tramper, a tramper block, a press box, a conveyor feed to said press box, means for reciprocating said block, means for operating said conveyor, said conveyor operating means being automatically operated by the tramper block, said automatic means including a reciprocating bar disposed above the press box, a roller

member upon one end of the bar, a channel iron on the tramper block and engaging said roller, said channel iron having its upper end curved whereby the upward movement of the tramper block will reciprocate the bar and operate a belt shifter, said belt shifter operable in relation to fast and loose pulleys on a drive shaft for said conveyor.

2. In a cotton tramper, a tramper block, a press box, a conveyor feed to said box, means for reciprocating said block, means for operating said conveyor, a reciprocating bar above the press box, a roller at one end of said bar, a channel member carried by the tramper block, said channel member having a curved upper end whereby to engage the roller upon the upward stroke of the tramper block to reciprocate the bar in one direction and reciprocate the bar in the opposite direction upon the downward stroke of the tramper block whereby to positively operate a belt shifter connected with the opposite end of the bar, said belt shifter operable in relation to fast and loose pulleys on a drive shaft for said conveyor.

1,461,640. PROCESS AND APPARATUS FOR EVAPORATING LIQUIDS. ELIAS WIRTH-FREY, Aarau, Switzerland, assignor to the Firm Aktiengesellschaft Kummer & Matter, Aarau, Switzerland. Filed Aug. 15, 1921. Serial No. 492,456. 4 Claims. (Cl. 159—16.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

4. Apparatus for evaporating liquids, comprising a vessel adapted to contain the liquid to be evaporated, heating means therefor, means for withdrawing and for compressing the vapors from said vessel and for supplying the greater part of the compressed vapors to said heating means, means for compressing a second portion of said first mentioned vapors to a pressure sufficient to overcome the hydrostatic head in said vessel, and means for liberating such second portion within the lower part of said vessel.

1,461,641. WINDING MACHINE. ERNST ZINDEL, Erlenbach, Switzerland, assignor to the Firm Scherer-Nussbaumer & Co., Erlenbach, Switzerland. Filed Aug. 25, 1921. Serial No. 495,211. 4 Claims. (Cl. 242—34.)

1. In a locking device for cop winders, a carrier, a sleeve member thereon, a guide rod loosely passing

through said member, a second member loose on said rod, one of said members having a conical surface, an element on the other member cooperating with said conical surface, and a spring between the two members, whereby

upon movement of the carrier and sleeve member the spring will be compressed to release said second member from its one-sided clamping engagement with said rod to permit said carrier to progress along said rod.

1,461,642. TRACTOR. CHARLES SIDNEY ALLEN, Dawson, Ga. Filed Aug. 26, 1921. Serial No. 495,667. 6 Claims. (Cl. 180—25.)

1. A tractor having power actuatable driving and steering wheels, an elevated frame provided with depending side housings in which the spindles of the driving wheels are journaled to adapt the machine to operate in straddling relation with a row of plants, a motor carried by the frame, a differential axle carried by the frame and having operative connections with the driving wheels consisting of chains and sprockets housed in said depending side housings, a transmission mechanism interposed between the motor and the differential axle, and operative connections between the transmission mechanism and the steering wheel.

1,461,643. ALLOY. FREDERICK M. BECKETT, Niagara Falls, N. Y., assignor to Electrometallurgical Company, Niagara Falls, N. Y., a Corporation of West Virginia. Filed Nov. 22, 1920. Serial No. 425,784. 4 Claims. (Cl. 75—1.)

1. An alloy containing as essential components magnesium, silicon and manganese, the silicon in excess of the equimolecular proportion to the magnesium, and the manganese in lesser molecular proportion than the silicon

1,461,644. VALVE FOR AUTOMATIC WATER HEATERS. CLARK D. BEDWIN, Long Beach, Calif. Filed Feb. 1, 1922. Serial No. 533,371. 6 Claims. (Cl. 236—25.)

1. In an automatic water heater the combination with a burner of a fuel supply valve, an automatic controlling means for said valve, said means including a pressure cylinder and piston movable therein, a valve controlled water inlet for said cylinder and a check valve in said water inlet for arresting the backward flow of the water and permitting the formation of excessive back pressure for operating the aforesaid piston to close the fuel valve.

1,461,645. AUTOMATIC TELEGRAPH SYSTEM. GEORGE R. BENJAMIN, Jersey City, N. J., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Nov. 4, 1916. Serial No. 129,421. 3 Claims. (Cl. 178—71.)

3. In an automatic telegraph system, the combination with a continuously operating, synchronous main line distributor, of extension circuit means extending to a distant point, means operated by such distributor for repeating into such extension circuit means, receiving means at the distant point arranged to receive signals so repeated, transmitting means at the distant point comprising a restarting translator, such transmitting means and translator arranged to transmit through such extension circuit means, and repeating means arranged to receive signals so transmitted from the distant point and to repeat them into said main line distributor, and comprising a receiving translator and actuating means therefor controlled by said distributor for a start impulse and thereafter free from all control of said distributor-operating means, and means controlled by said receiving translator for setting up contact combinations corresponding to the signals received, said distributor comprising means controlling the time of transmission into it from the contact combinations so set up.

1,461,646. MATERIAL FOR PRODUCING SMOKE SCREENS. HARRY F. FRENCH and RAYMOND C. BENNER, Fremont, Ohio, assignors to National Carbon Company, Inc., a Corporation of New York. Filed Jan. 14, 1919. Serial No. 271,126. 15 Claims. (Cl. 52—23.)

1. A non-explosive smoke producing mixture containing a carbonaceous material, an oxidizing agent, and a smoke forming substance vaporizable at a low temperature.

1,461,647. ORE SEPARATOR. ALBERT E. BOOKWALTER, Coeur d'Alene, Idaho. Filed Sept. 7, 1922. Serial No. 586,699. 4 Claims. (Cl. 83—76.)

1. An ore separator comprising a water box, a separating frame mounted for horizontal movement in said box with its lower side below the water level, the sides of said frame being spaced from the sides of the tank, vertically movable plungers between said tank and frame sides, and means for simultaneously shaking said frame horizontally and pulsating said plungers vertically.

1,461,648. WINDOW-CLEANER'S LIFE NET. GEORGE W. BRYANT, New York, N. Y. Filed July 2, 1921. Serial No. 482,211. 1 Claim. (Cl. 20—71.)

A window cleaner's life net comprising a flexible structure having vertical and horizontal strands of rope knotted at their intersections, a plurality of permanently attached securing devices carried by the vertical mar-

gins of said structure, a plurality of adjustable and detachable securing elements secured to said structure between said margins, all of said securing devices being capable of co-acting with hooks adapted to be secured to a window sill, and handles secured to one of the marginal edges for permitting the structure to be carried when the same is in a folded condition.

1,461,649. GAME APPARATUS. JOHN A. ERNST, JR., Ridgefield Park, N. J. Filed Sept. 27, 1921. Serial No. 503,529. 6 Claims. (Cl. 46-61.)

1. A game apparatus which comprises a support, a pivoted semaphore member connected to said support, one arm of said semaphore normally projecting above the edge of the support, means moving upon the edge of said support to contact with the projecting arm and depress the same, and a second arm on said semaphore normally disposed below the edge of the support and adapted to be elevated when the projecting arm is depressed by said means, the mass distribution of said semaphore being so disposed as to cause the return of the semaphore to normal position as soon as the projecting portion is released by said means.

1,461,650. HOISTING MACHINE. LOUIS FALZER and EDWIN M. WEBBER, Chicago, Ill.; said Webber assignor to said Falzer. Filed Aug. 18, 1922. Serial No. 582,607. 3 Claims. (Cl. 254-145.)

1. In a portable hoisting apparatus of the character described, the combination of a pulley-supporting frame, a pulley suspended from and within the upper portion of said frame, a hoisting cable passed over said pulley, a bucket hung from one depending limb of said cable, a platform mounted on the lower portion of said frame, an electric motor, speed reducer, safety device and winch-head mounted in coaxial alignment on said platform with said winch-head disposed at one side of the vertical path of said bucket and having the other depending limb of said cable coiled thereon, and the axis of rotation of said winch-head being disposed substantially at right angles to the depending limb of the cable wound thereon.

1,461,651. WHEELED TOY. RALPH P. FOX, Harrisburg, Pa. Filed Mar. 13, 1922. Serial No. 543,250. 2 Claims. (Cl. 46-45.)

1. A toy of the character described comprising spaced wheels, an axle connecting said wheels, a stationary sleeve surrounding said axle, a handle, a handle support comprising a substantially U-shaped member straddling said sleeve and secured thereto, said handle being received by said support, a platform, a pivot for said platform, said pivot being passed through the handle and said support therefor and associated therewith, a bushing surrounding the pivot and interposed between the platform and said handle, means for rotating the platform incident to the rotation of said wheels, and a toy figure carried by the platform.

1,461,652. DISPLAY LAST. ABRAHAM E. GOODWIN, Newburyport, Mass., assignor to Lynn Last Company, Lynn, Mass., a Corporation of Massachusetts. Filed June 8, 1922. Serial No. 566,754. 10 Claims. (Cl. 35-17.)

✓ A last having a representation of a shoe formed on the surface thereof.

1,461,653. EMULSIFYING APPARATUS. GEORGE GRINDROD, Oconomowoc, Wis., assignor to Carnation Milk Products Company, Oconomowoc, Wis., a Corporation of Delaware. Original application filed Aug. 12, 1919, Serial No. 316,966. Divided and this application filed Oct. 15, 1921. Serial No. 508,014. 5 Claims. (Cl. 99-2.)

2. In an emulsifier, a steam pressure receiving chamber having a plurality of jet orifices communicating

therewith and through which the steam is adapted to impinge upon a liquid and break up the liquid into minute globules, expansion chambers to receive the individual jets, and an ejector chamber into which the jets and liquid globules are directed through the expansion chambers, said ejector chamber having outlet orifices through which the liquid globules are distributed under steam pressure into a surrounding body of emulsifying liquid.

1,461,654. COLLAPSIBLE FUNNEL. WILLIAM J. HAESSLER, Philadelphia, Pa. Filed July 17, 1922. Serial No. 575,719. 4 Claims. (Cl. 225—38.)

1. In combination, an annulus, a frame-like member supported thereby, a slide operating within the annulus, means for guiding the slide in its movements, a funnel constructed of flexible water proof material, rib elements connecting the funnel with said slide, slotted lugs projecting inwardly from the annulus and constituting guides for said rib elements, and means for operating said slide, whereby the funnel is extended for use when the slide is elevated, and collapsed within the frame-like member when the slide is lowered.

1,461,655. FORGING MACHINE. FRANK A. HALLECK, Oak Park, Ill., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed May 2, 1919. Serial No. 294,270. 12 Claims. (Cl. 76—5.)

1. In a forging machine, a pair of relatively movable die members, a relatively reciprocable cylinder and piston, relative reciprocation of said cylinder and piston causing relative movement of said die members, and self-contained means for causing a flow of air across the faces of said die members including relatively movable pressure variation producing members actuated on relative movement of said cylinder and piston.

1,461,656. DISPLAY BOX. ADA K. HARNED, New York, N. Y. Filed Mar. 25, 1921. Serial No. 455,666. 1 Claim. (Cl. 206—44.)

A display device comprising a box consisting of a cover and body, a leg member hinged to the back of the box body and to the top of the box cover by a flexible hinge embracing a flange of the box cover, said flexible

hinge adapted to allow certain play to the said leg member to permit the same to be braced against the inside

of the flange of the box cover when the device is in operative position, thereby removing the strain from the flexible hinge.

1,461,657. RADIATOR VALVE. CHARLES V. HAYNES, Philadelphia, Pa., assignor to Hoffman Specialty Company, New York, N. Y., a Corporation of Illinois. Filed Feb. 10, 1919. Serial No. 276,156. 2 Claims. (Cl. 251—156.)

1. In a radiator valve, a body having an inlet at the bottom, a valve seat coaxial with the inlet and an outlet of rectangular section at the side, an adjustably held sleeve fitting in the body and having an opening corresponding in shape with the outlet section, a cap and connections retaining the sleeve in position and holding the end of the sleeve against the body about the valve seat, packing sealing the cap against the body and sleeve and the joint between them, a valve carried by the sleeve and adapted to engage the valve seat and rotary axially-fixed means for rotating the valve.

1,461,658. TORCH. IRVING M. HAYWARD, Brooklyn, N. Y. Filed Dec. 6, 1921. Serial No. 520,309. 5 Claims. (Cl. 158—27.)

1. A self heating tool comprising a combined fuel reservoir and vaporizing chamber, and a container coacting with the walls of said reservoir to retain a quantity of preheating fuel.

1,461,659. FUEL-ECONOMIZING DEVICE FOR INTERNAL-COMBUSTION ENGINES. JAMES C. HENRY, East St. Louis, Ill. Filed Apr. 19, 1920. Serial No. 375,030. 10 Claims. (Cl. 123—122.)

1. An attachment for internal combustion engines, consisting of a device provided with a narrow elongated slot through which the mixture supplied by the car-

buretor passes before entering the cylinders of the engine, means for heating the mixture passing through said device, and means for enabling the effective length of

said slot to be varied when the engine is in operation so as to increase or diminish the supply of combustible mixture to the engine.

1,461,660. LANDING DEVICE. HENRY C. F. HOLZ, Salt Lake City, Utah. Filed Dec. 9, 1922. Serial No. 605,861. 1 Claim. (Cl. 244—29.)

An airship having its wings pivoted to their supports at the front ends, movable means for connecting the rear ends of the wings together, and means for adjusting the movable means vertically to change the inclination of the wings, such means consisting of drums mounted on the rear portion of the wings, cables connected with the drums and with the diagonally opposite front portions of the wings and manually operated means for actuating the drums.

1,461,661. ELECTROLYZING APPARATUS FOR THE MANUFACTURE OF OXYGEN AND HYDROGEN. GEORGE FRANÇOIS JAUBERT, Paris, France. Filed Apr. 4, 1922. Serial No. 549,602. 2 Claims. (Cl. 204—5.)

1. An apparatus for manufacturing oxygen and hydrogen by electrolysis, having nickel electrodes, and nicke diaphragms perforated to form a fine mesh and separating the electrodes.

1,461,662. INTERNAL-COMBUSTION ENGINE. FRED N. KAWAMURA, Denver, Colo. Filed Jan. 5, 1920. Serial No. 349,422. 1 Claim. (Cl. 123—198.)

The combination with an internal combustion engine having a carburetor, of a fuel supply tank, a conduit for establishing communication between the carburetor and said tank, a valve casing disposed in said conduit and having an inwardly extending tubular projection, a diaphragm secured within the casing in spaced relation with respect to said tubular projection, a valve carried by said diaphragm and normally disposed in closed position to prevent the passage of fuel from the tank to the carburetor, spring means surrounding said tubular projection and co-acting with the valve casing of a diaphragm for positively holding said valve in closed position, and a pipe connected with the intake manifold of the engine and the tubular projection for establishing communication between the interior of the engine and the interior of the valve casing to open said valve while the engine is in operation.

1,461,663. GAS BURNER. JEAN KEMMER, Ilion, N. Y. Filed Oct. 27, 1921. Serial No. 510,696. 1 Claim. (Cl. 158—105.)

A device for the purpose indicated comprising concentric main and auxiliary burners of which each is provided with a chamber and suitable spreaders at the top thereof, a pair of fuel conductors arranged in superimposed relation of which the upper is in communication with the main burner chamber and the lower in communication with the auxiliary burner chamber, a valve casing having means for connection to a source of fuel supply and in operative connection with both of said fuel conductors, a valve mounted in said casing and ported to admit fuel into both conductors simultaneously or into the conductor in communication with the auxiliary burner chamber, depending on the position of the valve, and an air control means mounted on the fuel conductor in communication with the main burner chamber and consisting of a gate for sliding movement longitudinally of said conductor to more or less open an air inlet in the bottom of said conductor adjacent its point of communication with the valve casing, said gate being slotted longitudinally, and a screw threaded into said conductor and passing through said slot, the head of the screw bearing on the gate for the purpose specified.

1,461,664. DIRECTION INDICATOR. OTTO CHARLES KNIGGE, New York, N. Y. Filed Dec. 13, 1921. Serial No. 522,086. 4 Claims. (Cl. 116—48.)

1. A direction indicator for vehicles comprising a bracket carried by the dash of the vehicle, a standard mounted in said bracket and projecting through the top of the vehicle, said standard having a reduced portion on

its upper end forming a base for a lamp housing, a direction indicator, and a tubular extension projecting from said direction indicator, said tubular extension being of

a diameter to permit of its passing over the upper end of said standard to complete the lamp housing and form a mount for said direction indicator on said standard.

1,461,665. GREASE CUP. WILLIAM PETER KOEPFLER, Ponchatoula, La. Filed Mar. 31, 1922. Serial No. 548,400. 1 Claim. (Cl. 184-105.)

A grease cup provided with a spring pressed valve, in combination with a sliding cup filler formed as a shell telescopically engageable with the grease cup and having its upper end closed except for a bore leading into a chamber, and an upwardly seating valve for closing said bore.

1,461,666. CLAMPING MECHANISM FOR RADIAL DRILLING MACHINES. JAMES E. LARSH, Cheviot, Ohio, assignor to The Fosdick Machine Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed June 18, 1921. Serial No. 478,541. 4 Claims. (Cl. 77-28.)

1. In a radial drilling machine, the combination of a swingable drill-arm, a support on which said drill-arm swings, a clamp between said swingable drill-arm and said support, a fluid actuated part for operating said clamp, cushioning means for the latter whereby to cushion said clamp, a valve for said fluid actuated part,

and an axially movable rod extending lengthwise of said drill-arm having connection with said valve and ar-

ranged to be manually grasped at various positions along its length for manual movements of said rod axially to operate said valve.

1,461,667. RECEPTACLE. ISIDOR LEVY, Brooklyn, N. Y. Filed Jan. 19, 1922. Serial No. 530,419. 1 Claim. (Cl. 45-71.)

A receptacle comprising a cylindrical body portion having a portion cut away to provide access to the interior thereof, a flanged plate secured to each end of the body portion, said flanged plates being of larger diameter than the diameter of the cylindrical body portion and each plate having a flange extending around its respective end of the cylindrical body portion in spaced relation thereto, a sliding plate conforming to the cylindrical shape of the body portion and adapted to close the access opening thereof, said plate having its edges received in the space between the flanges of the end plates and the cylindrical body portion, and a flange secured to each edge of said closure plate and overlying the flange of its respective flanged plate.

1,461,668. UNIVERSAL FIXTURE. COURTNEY T. MALE, Schenectady, N. Y. Filed June 13, 1921. Serial No. 477,258. 1 Claim. (Cl. 90-60.)

In combination, a table, a fixed jaw mounted on the table, said table provided with a slot, a movable jaw having a shank passing through the slot, means for

locking the moveable jaw in a fixed position, a block mounted on the table and having a shank passing through the slot, means for engaging the shank of the

block for locking the block in a fixed position, and a screw element threaded in the block and adapted to engage the movable jaw.

1,461,669. LOOSE-LEAF CONNECTION. FRANCIS L. MARTIN, Brooklyn, N. Y., assignor of one-half to Adolf W. Swiezy, New York, N. Y. Filed June 1, 1922. Serial No. 565,042. 3 Claims. (Cl. 129—1.)

1. In a loose leaf binder, the combination with a binder back provided with transverse bars, of clips adapted to be attached to the leaves and resiliently engaged with the bar, said clips each comprising a single strip of resilient wire bent to provide a medial loop with the terminals thereof in abutting relation and provided with outwardly divergent portions having inwardly coiled extremities adapted to embrace the bar for detachable and shiftable association therewith.

1,461,670. DEVICE FOR INSERTING MAP TACKS. WILLIAM PERCY MILLS, Philadelphia, Pa., assignor to Moore Push-Pin Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 3, 1922. Serial No. 526,829. 1 Claim. (Cl. 1—47.)

A device for inserting headed map tacks which consists of a strip of suitable spring metal of prong shape, the

opposite sides of which terminate in hollow semi-spherical outwardly projecting portions adapted to receive the heads of the map tacks, the inner edges of said semi-spherical portions being provided on their lower edges with complementary notches adapted to receive the shanks of the map tacks and the inner edges of said semi-spherical portions being also provided at their opposite side edges with complementary notches adapted to receive the shanks of the map tacks.

1,461,671. TIMING INDEX. VICTOR W. PAGÉ, Kew Gardens, New York, N. Y. Filed June 2, 1921. Serial No. 474,428. 3 Claims. (Cl. 29—84.)

1. In a cam shaft assembly, a cam shaft, a housing, said housing being provided with a window, a driving gear for the cam shaft and having a portion thereof constantly visible through said window, a stationary pointer carried by the housing, and means carried by the driving gear and adapted to coincide with said pointer to indicate the relative position of the cam shaft and the mechanism adapted to be operated thereby.

1,461,672. SPRING MOUNTING. VICTOR W. PAGÉ, Kew Gardens, New York, N. Y. Filed June 18, 1921. Serial No. 478,527. 3 Claims. (Cl. 267—54.)

3. An attaching means for springs of vehicles comprising a plurality of bearing blocks rigidly carried by the frame of the vehicle, a bearing mounted for universal movement in said bearing blocks, and a spring mounted for sliding movement in said bearing, said spring having a cylindrical hollow end forming a lubricant receptacle whereby lubricant is fed to the sliding bearing and the universal bearing, substantially as described.

1,461,673. FLUSH TANK. OSCAR C. PAPIN, Dubuque, Iowa. Filed Oct. 24, 1921. Serial No. 509,889. 2 Claims. (Cl. 4—5.)

1. A flush tank of the class described comprising a goose neck outlet pipe, an inlet pipe, a valve connected with the inlet pipe, a float controlling the same, a tank rotatably mounted in the flush tank, manually operated

means for rotating the same, a feed pipe leading from the valve of the inlet pipe to the rotary tank, and adjust-

able means for checking the flow of water from the inlet pipe into the flush tank to cause the rotary tank to be filled first.

1,461,674. AUTOMOBILE BRAKE. GORDON PARSON, Plainfield, N. J. Filed July 9, 1921. Serial No. 483,615. 7 Claims. (Cl. 188-67.)

5. A brake for vehicles, including a shaft, a block surrounding the shaft, a pair of brake shoes pivotally mounted at one of their ends to said block and moving toward or from said shaft on said pivoted ends.

1,461,675. RECLAIMING VULCANIZED RUBBER. WILLIAM BEACH PRATT, Wellesley, Mass., assignor to E. H. Clapp Rubber Company, Boston, Mass., a Corporation of Massachusetts. Filed May 25, 1918, Serial No. 236,464. Renewed Dec. 6, 1922. 3 Claims. (Cl. 18-52.)

3. In reclaiming vulcanized rubber, digesting such rubber at an elevated temperature with approximately 2% to 10% of a volatile solvent obtained by digesting oil of turpentine with oxalic acid at an elevated temperature and removing the acid.

1,461,676. RACK. PATRICK T. REGAN, Bayonne, N. J., assignor of one-half to E. J. Quinn, Bayonne, N. J. Filed July 5, 1922. Serial No. 572,830. 2 Claims. (Cl. 126-342.)

1. A drying rack adapted for use with a circular support, comprising upper and lower split bands adapted to embrace the support, spaced vertically disposed rods supported by said bands, a plurality of supporting arms pivoted on the upper band and normally arranged in parallelism with said support, and adapted to be arranged

horizontally for use, a brace for said arms, said brace consisting of a semi-circular member slidable on said rods, and rods connecting said circular member with said supporting arm and pivotally associated with said parts, and means for connecting the said sliding brace member with the upper band when the arms are swung to a position for use.

1,461,677. SLIDE RULE. CLARENCE NEWTON REYNOLDS, Jr., Providence, R. I. Filed Aug. 27, 1921. Serial No. 496,028. 6 Claims. (Cl. 235-70.)

2. In a slide rule for illustrating the implications of Einstein's restricted theory of relativity, the combination with a body having a scale marked thereon for indicating the longitudinal velocities, two slides mounted in the body, one above the other, one slide being provided with windows, two scales marked on the slide provided with windows, one for indicating the time corresponding to the longitudinal velocities and one for indicating transverse velocities relating to the longitudinal velocities, and a scale marked on the other slide for indicating time of the transverse velocities.

1,461,678. CAR DOOR. HENRY RHOBECKER, Columbus, Ohio. Filed July 15, 1921. Serial No. 484,894. 3 Claims. (Cl. 20-22.)

1. A car door mounted for horizontal sliding movement at the inner surface of the car wall and having upper and lower guides for the corresponding edges thereof and a housing guide extending from the rear edge thereof and parallel with the side wall of the car for the reception of the door when open, the door being adapted at its free or front edge to overlap the inner surface of the door jamb or frame in its closed position, a guide clip disposed to receive the overlapping portion of said edge, and an outwardly extending stop flange being provided adjacent to the free or front edge of the door and extending the full height thereof for abutting contact with the inner surface of the door jamb or frame.

1,461,679. GARMENT. ISAAC ROGGEN, Yonkers, N. Y. Filed June 1, 1922. Serial No. 565,021. 4 Claims. (Cl. 2-92.)

4. In a placket construction, a garment member having a placket opening, a binding for said opening, said bind-

ing comprising two plies of material, one ply longer than the other and one end of each ply secured to the said member, an edge of each ply secured to the edge of the member along said opening, each ply folded to extend on opposite sides of the crotch of said opening, the shorter ply terminating between the longer ply and the member to serve as a reinforcement for said crotch, said plies permanently held in place by securing means passing through the opposite folds of said plies and the said member adjacent the crotch.

1,461,680. LIP-STICK CONTAINER. LE ROY ROOT, Brooklyn, N. Y., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed June 1, 1922. Serial No. 565,022. 8 Claims. (Cl. 206—56.)

1. In a lip-stick container, a tubular body, an end cap, a threaded stem providing a revoluble connection between said body and cap and non-revoluble with respect to said cap, and a follower mounted within said body and having cooperative engagement therewith and with said threaded stem, whereby by relative revoluble movement between said body and cap said follower will be moved longitudinally of said body.

1,461,681. ANIMAL TRAP. JOHN P. SCHUCKMAN, Wichita, Kans. Filed Feb. 27, 1922. Serial No. 539,545. 5 Claims. (Cl. 43—61.)

1. In an animal trap, a compartment having an opening in one side formed by striking the metal inwardly to provide spaced guide flanges for co-action with a cage which is designed to be inserted and removed through said opening, said flanges co-acting with the cage to prevent displacement and to facilitate insertion.

1,461,682. TRAY DRIER. WALTER M. SCHWARTZ, Philadelphia, Pa., assignor to Proctor & Schwartz, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 12, 1921. Serial No. 484,130. 6 Claims. (Cl. 34—39.)

1. The combination in a drying machine, of a heating compartment; a drying compartment; a partition sepa-

rating the two compartments; and including two sets of baffles; automatic means for opening one set of baffles

and for closing the other set of baffles; and means for circulating air in the two compartments.

1,461,683. BOILER-FEED MECHANISM. DAVID C. SEARS, Altus, Okla., and ARTHUR M. BRADFORD, Clovis, N. Mex. Filed Nov. 13, 1920. Serial No. 423,788. 2 Claims. (Cl. 137—101.)

1. A feed water system for boilers having a water column consisting of a casing enclosing a float and in communication at its upper and lower ends with the boiler by means of steam and feed water pipes of which the latter is in communication with a water supply pump, a float controlled feed water valve interposed in said feed water pipe between the boiler and the feed water pump, and an alarm mechanism having a pressure controlling valve in communication with the upper end of the water column casing and operatively connected with the float, said valve having its stem provided with a cross arm and a link connecting the cross arm with the float.

1,461,684. PLATING HALF-ROTARY FEED GUIDE. NAPOLEON HENRY SEYMOUR, Waltham, Mass. Filed May 4, 1922. Serial No. 558,486. 9 Claims. (Cl. 66—12.)

1. A feed drive for knitting machines comprising a bearing bracket for connection with the moving carriage of a knitting machine, a stem rotatably carried by the bracket and having a thread-passage, means for impart-

ing rotary movement to the stem, and means for limiting rotation of the stem, said means consisting of a yoke

bar secured to the stem and extending transversely thereof with its end portions extending to engage the bracket and limit rotation of the stem.

1,461,685. AMPLIFIER. RUFUS PAUL SILVERTHORN, Marion, Ohio. Filed Nov. 10, 1921. Serial No. 514,297. 2 Claims. (Cl. 181—27.)

1. A tone amplifier for phonographs, including a horn, and a frame around the mouth of the horn, said frame being disconnected from the horn mouth at intervals around the horn, the length of such disconnected parts of the frame being several times greater than the maximum lateral dimension of the frame.

1,461,686. TOOL. REGINALD W. STONE, Pasadena, Calif. Filed Jan. 24, 1922. Serial No. 531,488. 1 Claim. (Cl. 15—104.01.)

A scraper tool, comprising a substantially rectangular body which is milled and which has its corners rounded, said body having one of its ends widened and formed with a reduced extension whose edges and end are sharpened, said handle having its opposite end provided with a reduced portion terminating in a spoon-shaped extension, the outer end of the spoon-shaped extension being pointed, its upper edges sharpened and its sides integrally formed with sharpened scraping edges.

1,461,687. FUEL CLEANER. ROY E. STROBEL, San Luis Obispo, Calif. Filed June 24, 1921. Serial No. 480,173. 3 Claims. (Cl. 210—165.)

2. In a fuel cleaner, a receptacle having an inlet and outlet adapted to be connected in a liquid fuel line to an engine, said inlet terminating in a downwardly extending discharge and within the receptacle, a funnel shaped baffle in the receptacle and an inverted baffle supported above the first named baffle, said inverted baffle being smaller than the first named baffle and hav-

ing an opening between the respective edges of both baffles, the downwardly extending end of the inlet protruding through the inverted baffle with its discharge end confined within the enclosure made by both of the baffles, and a clearing screen in the receptacle between the baffles and the outlet, a removable top for the receptacle with the said outlet arranged therein and said

clearing screen being mounted transversely across the receptacle and held in place by the fastening for the said removable top, the bottom of the receptacle providing a sump with a drain cock in the base thereof; whereby foreign substances separated from the fuel may be collected in the sump and released by said drain cock at intervals.

1,461,688. LIFTING TRUCK. WILLIAM STUEBING, Jr., Cincinnati, Ohio. Filed Dec. 24, 1919. Serial No. 347,181. 8 Claims. (Cl. 254—10.)

1. In a lifting truck of the character described, a wheeled base, an elevating platform, and means for raising said platform including solid resilient mechanism adapted to permit the platform to move relatively to said base, said resilient mechanism being connected between the base and platform.

1,461,689. FLY-PAPER HOLDER. OLAF JOHAN SWANSON, Chappaqua, N. Y. Filed Oct. 22, 1921. Serial No. 509,538. 2 Claims. (Cl. 206—61.)

1. A fly paper holder consisting of a tray having side and end walls or flanges and transverse guards connect-

ing the side walls, one of said guards arranged at an intermediate portion of the length of the tray being arched to form a handle and being provided near its extremities with openings for engagement by tongues formed on the side walls of the tray.

1,461,690. DISK WHEEL. EILET M. TORKELSON and BASIL MEIGS, Washington, D. C. Filed Nov. 20, 1922. Serial No. 602,123. 12 Claims. (Cl. 301-63.)

9. A disk wheel construction including a hub, a main disk having a felly flange, a sectional rim construction including a main section adapted to fit on said felly flange and having a retaining flange extending inwardly toward the axis of the wheel, a cover disk carried by said retaining flange, a tire locking member detachably secured to said retaining flange, anchoring lugs carried by the felly flange of the main disk, and fastenings for connecting the retaining flange of the main section of the rim to the said lugs.

1,461,691. METHOD OF AND MEANS FOR PROPELLING AND CONTROLLING VESSELS. THOMAS G. TULLOCH, London, England. Filed Feb. 27, 1920. Serial No. 361,707. 7 Claims. (Cl. 115-14.)

1. A propeller for vessels comprising a water cylinder communicating with an opening in the vessel, a piston operable in said water cylinder, an explosive cylinder, a piston operable in said explosive cylinder, means connecting the two pistons, and means for operating the explosive cylinder piston for compressing a charge in the cylinder, said operating means allowing a rapid movement of the piston in one direction but effecting a slow movement of the piston in the opposite direction.

1,461,692. LOCK. ANDREW YUROW, New York, N. Y., assignor to Samuel M. Elowsky, Brooklyn, N. Y. Filed Aug. 2, 1922. Serial No. 579,247. 4 Claims. (Cl. 20-46.)

1. The combination with a lock of the character described including a casing, a bolt consisting of a pair

of side bars and a crossbar uniting said side bars at the front ends, and a keeper with which the bolt is en-

gageable, of guard lugs extending from one end of the casing and overlying the side bars of the keeper at the front and rear faces thereof.

1,461,693. CIRCULAR RIB-KNITTING MACHINE. THOMAS CHARLES BROMLEY and WALTER CAVERS, Leicester, England, assignors to Mellor Bromley & Co. Limited, Minotaur Works, Leicester, England. Filed Aug. 10, 1921. Serial No. 491,112. 5 Claims. (Cl. 66-22.)

1. In a circular rib knitting machine, in combination, a rotary needle cylinder, a fixed spindle coincident with the axis of said cylinder, a dial rotatably mounted upon said spindle and movable up and down thereon, a rotary frame carried by said spindle and situated within the needle cylinder, dogs on the inside of said cylinder to drive said frame, and a rod fixed to and projecting from the dial and passing slidably through the rotary frame to transmit rotation from the latter to the dial.

1,461,694. LIFTING DEVICE. JOSEPH BURKLEY, Treadwell, N. Y. Filed Feb. 13, 1922. Serial No. 536,215. 1 Claim. (Cl. 53-1.)

A utensil for handling articles of food, comprising two sets of arc-shaped arms, a rod projecting through the

upper ends of said arc-shaped arms pivotally connecting them together, rigid members connecting each pair of arc-shaped arms, a perforated plate attached to the lower ends of each set of arms, the inner edges of the plates contacting, forming a continuous platform when in normal position, handles attached to the rigid members mounted on the arc-shaped arms presenting a means for operating the pairs of arms, and a handle provided with hook members for detachably engaging the rod joining the upper ends of the arc-shaped arms for lifting the device.

1,461,695. ELECTRIC SWITCH. GEORGE A. BURNHAM, Saugus, Mass., assignor to Sears B. Condit, Brookline, Mass. Filed Oct. 12, 1920. Serial No. 416,504. 18 Claims. (Cl. 200—150.)

1. An electric switch having a component adapted to move to absorb energy, yielding supporting means for said component, and yielding means to control the action of said supporting means.

1,461,696. SHOE DRESSING. SALVATORE CASSISA, Far Rockaway, N. Y. Filed June 2, 1922. Serial No. 565,445. 3 Claims. (Cl. 134—7.)

2. A shoe dressing containing plaster of Paris, borax, magnesia, sugar, starch and glycerine in proportions substantially as specified.

1,461,697. PROPELLING ATTACHMENT FOR BOATS. JOHN N. COUGHLAN, New York, N. Y. Filed June 5, 1922. Serial No. 565,855. 1 Claim. (Cl. 115—24.)

A propelling attachment for boats, which comprises a bearing portion adapted to rest on the upper edge of the rear transom of a boat, a dependent plate on the front end of the bearing portion fastened to an interior portion of the boat, a U-shaped frame connected to the rear end of the bearing portion, a transverse plate on the frame, means for fastening the transverse plate of the U-shaped frame to the rear face of the transom, a driving gear supported on said plate, a driving shaft extending through said bearing portion, a pinion on the front end of said shaft meshing with said gear, a pinion on the rear end of said shaft, the rear end of said shaft

being journaled in one part of the U-shaped frame, a driven shaft journaled in the U shaped frame, a pinion on said shaft, a chain connecting the pinion on the driven shaft and the pinion on the rear end of the driving shaft, a propeller on the rear end of the driven shaft, outwardly and rearwardly projecting bracket plates connected to the upper and lower ends of the U-shaped frame, a rudder shaft journaled at its ends in said bracket plates, a rudder on said shaft, means for permitting the movement of said rudder, a pinion attached to said driving gear, and a handle attached to said pinion.

1,461,698. BATH AND BASIN FITTING. FAY CHASE DARLING, Walton, N. Y. Filed Feb. 8, 1923. Serial No. 617,896. 2 Claims. (Cl. 4—35.)

1. In combination with a bath or basin fitting having a discharge opening and a stopper therefor and an overflow opening, a flexible member connected to the stopper, and a counterweight connected to said flexible member, said counterweight being adapted to move the flexible member through the overflow opening of the fitting to cause disengagement of the stopper from the discharge opening of said fitting.

1,461,699. TURBINE. LOUIS DE SANTIS, Yonkers, N. Y. Filed Aug. 10, 1921. Serial No. 491,314. 6 Claims. (Cl. 253—147.)

1. A turbine including a plurality of rotor units mounted on a common drive shaft, a casing having inde-

pendent compartments for separately housing said rotary units, each unit consisting of high and low pressure rotors, an annular high pressure fluid supply chamber surrounding the high pressure rotors of each unit, a primary intake leading from said supply chambers to the high pressure rotors, a plurality of circumferentially spaced auxiliary intakes leading from said high pressure supply chamber to each high pressure rotor, and manually controlled means for selectively opening and closing the said auxiliary intakes.

1,461,700. AEROPLANE. ELMER E. NICHOLS, Oakland, Calif. Filed July 25, 1921. Serial No. 487,383. 2 Claims. (Cl. 244—30.)

1. An aeroplane embodying in its construction a fuselage having an air-tight compartment therein, and means for supplying atmospheric air to said compartment, an oxygen supply carried by the body of plane and means operating automatically when the atmospheric pressure in the compartment reaches a predetermined point, to cut off the atmospheric air supply to the compartment and admit oxygen from said tank.

1,461,701. FROG OR CROSSING STRUCTURE. CHARLES A. PSILANDER, Easton, Pa., assignor to William Wharton, Jr. & Company, Incorporated, Easton, Pa., a Corporation of Pennsylvania. Filed Apr. 18, 1923. Serial No. 632,891. 12 Claims. (Cl. 246—460.)

5. A central insert formed with a full section body and with continuous side flanges of reduced cross-section, whereby it has sufficient inherent flexibility to respond to selective deflection to resist crowning.

1,461,702. FRUIT-SIZING APPARATUS. FRED STEBLER and RALPH E. DAVIS, Riverside, Calif., assignors to Stebler Parker Co., Riverside, Calif., a Corporation of California. Filed Feb. 16, 1922. Serial No. 536,896. 10 Claims. (Cl. 130—32.)

1. In a sizing apparatus, the combination of spaced sizing units, a sorting belt to receive fruit from one of

the sizing units and discharge it upon the other sizing unit, means to direct all of the fruit from the first siz-

ing unit to one side of the sorting belt, and means to operate the sizing units and the sorting belt.

1,461,703. METHOD OF TREATING GRAIN GERM AND SCUTELLUM. DAVID CHIDLOW, Ridgefield, Conn., assignor to James F. Strachan and William S. Strachan, both of Montreal, Canada. Filed May 2, 1923. Serial No. 636,091. 7 Claims. (Cl. 83—42.)

1. The method or process of preserving the germ and scutellum of grain and the life sustaining vitamins contained therein, which consists in heating the germ and scutellum to a sufficiently high temperature and for a sufficient period of time to render the germ and scutellum invulnerable to the destructive action of the air while maintaining the heat below a temperature sufficient to destroy the vitamins in the germ and scutellum.

1,461,704. CARLINE. CHARLES D. BONSALE, Parnassus, Pa., assignor to P. H. Murphy Company, Parnassus, Pa., a Corporation of Pennsylvania. Filed Aug. 7, 1920. Serial No. 401,842. 7 Claims. (Cl. 108—5.6.)

1. A carline comprising a longitudinal portion of substantially inverted U section of uniform width with webs on each side terminating in the same horizontal plane and decreasing in height towards each end and having flanges in said plane increasing in width towards each end.

1,461,705. WINDING AND HANKING MACHINE. ARTHUR E. DUNHAM, Brockton, Mass., assignor to Brockton Welting Co., Inc., Brockton, Mass., a Corporation of Massachusetts. Filed Sept. 15, 1921. Serial No. 500,990. 9 Claims. (Cl. 242—53.)

1. In a machine of the class described, in combination, means to hold the free end of the material to be wound; an eye through which the material to be wound extends between said holding means and its source of supply; reel members provided with arms upon which

to wind the material, and mechanism comprising a movable arm and movable guide therefor to impart to said

eye movement substantially in the form of an 8 to wind the material in the form of a hank upon said arm.

- 1,461,706. RADIATOR CAP. GERALD E. FORCE, New York, N. Y., assignor to Helmet Cap Company, New York, N. Y. Filed May 12, 1922. Serial No. 560,430. 4 Claims. (Cl. 220—32.)

1. The combination with a radiator filling neck and an internally shouldered cap adapted to fit thereover, of a cap-retaining member contained within the cap and held against separation therefrom by engagement with said shoulder, and a connection between the retaining member and neck permitting the retaining member to be moved to positions overlying or lateral of the neck.

- 1,461,707. PORTABLE CONVEYER. GUSTAVE HANSON and CHARLES A. NELSON, East Berlin, Conn., assignors, by direct and mesne assignments, to Lancaster Iron Works, Lancaster, Pa., a Corporation of Pennsylvania. Filed Apr. 7, 1920. Serial No. 371,927. 11 Claims. (Cl. 198—126.)

1. A conveyer comprising a base, a supporting frame rising from the base, a conveyer frame rigid from end to end, extending on opposite sides, and supported for vertical movement on said supporting frame and pro-

jecting beyond the supporting frame on opposite sides thereof, means for independently lifting either end of said conveyer frame, said lifting means being supported by said supporting frame, and a conveyer movably mounted on said conveyer frame.

- 1,461,708. POLISHING MACHINE. FRANK A. MARCELLO, St. Paul, Minn., assignor of four-tenths to Joseph Franchi, St. Paul, Minn. Filed Apr. 3, 1922. Serial No. 548,945. 4 Claims. (Cl. 91—39.)

1. In a device of the class described, a hollow downwardly opening housing, an integral hollow handle, an electric motor secured within the housing, a polishing pad secured in sliding parallel relation and adjacent to the bottom of said housing, means interposed between the motor axle and said pad for reciprocating the latter and means for conveying oil from the hollow handle into and through the bottom of said pad and means for controlling the flow of oil from the handle.

- 1,461,709. MACHINE FOR MAKING ICE-CREAM CONES AND THE LIKE. FREDERICK H. MILLER, Portland, Oreg. Filed Dec. 27, 1915. Serial No. 68,910. 29 Claims. (Cl. 107—58.)

1. In a baking machine, an oven comprising a core and a divided mold, means for opening and closing the mold parts, a batter-applying element adapted to apply batter to the core between the separated mold parts when the mold is open, and means for operating said batter-applying element in time with the opening and closing of the mold.

- 1,461,710. CURVE RECORD SYSTEM. WILLARD C. BRINTON, New York, N. Y. Filed Sept. 26, 1917. Serial No. 193,391. 35 Claims. (Cl. 283—1.)

1. A plurality of translucent sheets having variously colored curves thereon adapted to be compared by being superposed or overlapped, each sheet being provided with major coordinate lines which are correspondingly spaced

on the several sheets and are adapted to register when the sheets are compared, and intermediate coordinate

lines which are non-correspondingly spaced on the several sheets but cooperate with the major coordinate lines on each sheet.

1,461,711. COOLING-LIQUID-PUMP MOUNTING FOR INTERNAL-COMBUSTION ENGINES. ARTHUR A. BULL, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Feb. 9, 1920. Serial No. 357,447. 20 Claims. (Cl. 123—175.)

1. In combination in an internal combustion engine having a jacket space through which a cooling liquid may flow, and driving mechanism through which the valve operating shaft of the engine is driven from the crank shaft thereof; a cover secured to the engine and enclosing said driving mechanism; a casing member secured to said cover and co-operating therewith to form a pump chamber; a discharge conduit leading from said pump chamber through said cover and discharging into the jacket space aforesaid, and through which a stream of cooling liquid is supplied thereto; a rotating impeller located within said pump chamber; a driving shaft located in line with the valve operating shaft of the engine and with which said valve operating shaft is operatively connected; a boss formed within said pump

chamber and surrounding said driving shaft and upon which boss said rotating impeller is supported; and driving means intermediate said driving shaft and said impeller and through which said impeller is driven from said driving shaft.

1,461,712. NAIL-PULLING MACHINE. WALLACE ELLIS, Beloit, Wis., assignor of one-half to William Ray, Beloit, Wis. Filed May 20, 1922. Serial No. 562,305. 11 Claims. (Cl. 254—18.)

1. In a device of the class described, a rigid elongated frame and a secondary vertically adjusted frame below the rigid frame, means within said frames for moving a number of planks longitudinally between them and means for removing protruding nails from the planks during the movement of the same.

1,461,713. WELL DRILL. FRANK L. GILMAN and JOSEPH R. WILSON, Los Angeles, Calif., assignors of one-fourth to Reni S. Berry, Los Angeles, Calif.; said Wilson assignor of one-third of his right to Caswell C. Matlock, Los Angeles, Calif. Filed July 22, 1921. Serial No. 486,675. 7 Claims. (Cl. 255—4.)

1. In a drill, a head, a plurality of cylinders pivoted on said head, pistons in said cylinders, drills carried by said pistons, means controlled by pivotal movement of

said cylinders for admitting air under pressure to said cylinders, and means for automatically effecting reciprocation of said pistons on delivery of air to the cylinders.

1,461,714. TRACTOR. WILLIAM N. SPRINGER, Janesville, Wis., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 16, 1919. Serial No. 317,922. 20 Claims. (Cl. 180—17.)

1. In a self-propelled vehicle of the class described, a driving shaft; a motor operatively connected with said shaft; two pairs of driven shafts, the individual shafts of each pair being parallel and spaced apart from one another; means whereby the individual shafts of each pair of driven shafts are driven simultaneously and in opposite directions from and by said driving shaft; driving wheels located one upon either side of the vehicle; and gearing whereby and through which each driving wheel may be driven from either one of the driven shafts of one of said pairs of driven shafts.

1,461,715. MOTOR VEHICLE. JOHN W. WHITE, Jr., Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Apr. 5, 1919. Serial No. 287,894. 12 Claims. (Cl. 188—78.)

11. In brake mechanism of the class described, a brake drum; a brake shoe supporting lever suitably supported

within and movable relative to said drum; a brake shoe operated by said lever; two curved seats formed one in said lever and the other in said brake shoe; a spool arranged between said lever and said shoe and within the curved seats aforesaid; and two springs located one upon each side of said spool, one end of each spring being connected with said shoe and the other with said lever.

1,461,716. FARM TRACTOR. LLOYD BLACKMORE, Highland Park, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed July 2, 1920. Serial No. 393,612. 18 Claims. (Cl. 180—17.)

1. In a tractor of the class described and in combination with a main supporting frame, two unitary driving devices one located upon each side of the tractor and at each end of said main frame and each of which devices comprises a supplemental top frame, and two pairs of depending legs the upper ends of which are fixedly secured to said top frame and which legs are arranged one pair in front of the other; two driving wheels associated with each of said driving devices and which wheels are arranged in tandem and are rotatably supported one between the lower ends of each pair of legs; means whereby said top frames may be secured one to each end of said main frame; an engine carried by said main frame and adapted to drive the tractor; two driving shafts driven by said engine and through which the driving wheels upon opposite sides of the tractor are driven from said engine; two oppositely rotating pulleys located above each of said supplemental top frames and which pulleys are driven from the driving shafts aforesaid; two driven shafts one supported by each of the top frames aforesaid, and each of which shafts is provided with two driven pulleys; two normally loose belts associated with each of said driving devices and which belts pass about the oppositely rotating pulleys aforesaid and about the pulleys upon the driven shaft associated with each driving device; and two belt tightening devices, one associated with the two belts through which the driving wheels upon each side of the tractor are driven and whereby one or the other of said belts may be tightened, to thereby drive the driving wheels with which they are associated.

THE OFFICIAL GAZETTE

OF THE

United States Patent Office.

Vol. 312—No. 3.

TUESDAY, JULY 17, 1923.

Price—\$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, \$5.00 per annum; single numbers, 10 cents each.
Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

Reciprocity of the Laws of Poland Recognized.

(ORDER NO. 2,826.)

U. S. PATENT OFFICE, Washington, June 30, 1923.

Notice is hereby given that the laws of Poland are recognized as affording to citizens of the United States privileges substantially reciprocal to the privileges accorded by the Nolan Act of March 3, 1921 (41 Stat. L., 1313), and that consequently all the privileges specified in said act will be extended to its citizens.

THOMAS E. ROBERTSON.

Commissioner.

ADJUDICATED PATENTS.

(U. S. C. C. A. Va.) Pugh patent, 1,030,428, for process of manufacturing wire-spoke rims, *Held* void and not infringed. *Wire Wheel Corp. of America v. Budd Wheel Co.*, 288 Fed. Rep., 308.

(U. S. C. C. A. Ohio.) Patent 1,284,432 invalid and not infringed. *Westinghouse Electric & Mfg. Co. v. Formica Insulation Co.*, 288 Fed. Rep., 330.

(U. S. C. C. A. Va.) Lindsay patent, Reissue 14,461, for driving wheel and axle, *Held* invalid and not infringed. *Wire Wheel Corp. of America v. Budd Wheel Co.*, 308 Fed. Rep., 308.

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,309,637, E. Klahn, Gyro apparatus, decided June 8, 1923, claim 1.

Pat. 1,381,932, J. E. Redford, Automatic slack adjuster, decided June 6, 1923, claims 1 and 2.

Interference Notice.

U. S. PATENT OFFICE, Washington, June 21, 1923.

Richard L. Clements, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the patent granted December 26, 1922, No. 1,440,057, to Richard L. Clements, care of J. E. Regan Machine Works, 76 Seventh Street, Long Island City, N. Y., and an application for patent filed by Melchior Armato, 1284 Clybourn Avenue, Chicago, Ill., and a notice of such declaration sent by registered mail to said Clements at the address of record and reforwarded to 4 Ketcham Place, Elmhurst, N. Y., the address furnished by his attorney, having been returned by the post office undeliverable, notice is hereby given that unless said Clements, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING,

Acting Commissioner.

Patent Office Publications

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decision.

EX PARTE A. SCHMIDT & SON.

Decided February 21, 1923.

PRINTS—REGISTRATION FOR LINE OF GOODS.

An advertisement relating to "Old and Modern Silver, Sheffield Plate, Old and Modern Glass, Garnitures and Fine Porcelains" should not be refused registration as a print "because it does not identify any particular goods," since the goods listed are articles of manufacture and there is no ground for holding that the print must relate to a specific individual article.

ON APPEAL.

PRINT.

Mr. Chauncey P. Carter for the applicants.

FENNING, Assistant Commissioner:

This is an appeal from the action of the Examiner of Trade-Marks refusing to register an advertisement as a print. The print indicates that it relates to "Old and Modern Silver, Sheffield Plate, Old and Modern Glass, Garnitures and Fine Porcelains." The Examiner refuses to register because it—

does not identify any particular goods, but does identify a line of goods.

The statute of 1874, under which prints are registered, indicates that when they are "designed to be used for any other articles of manufacture" they may be registered. It seems clear to me that the goods listed by applicant are articles of manufacture, and there is no ground for holding that the print must relate to a specific individual article. Where an applicant presents a plurality of prints, each identifying different specific goods, and requests that they all be included in a single registration, a different problem is presented.

In *ex parte Ruppert* (1906, C. D., 142; 121 O. G., 2327) a print apparently was registered for "malt liquors including beer and ale." Following this case, the Examiner of Trade-Marks is reversed.

Court of Appeals of the District of Columbia.

NULYNE LABORATORIES V. ELECTRO-ALKALINE COMPANY.

No. 1,502. Decided January 2, 1923.

TRADE-MARKS—"CHLOROX" AND "CLOROX" GOODS OF DIFFERENT DESCRIPTIVE PROPERTIES.

Assuming that, in a sufficiently diluted form, a bleaching, cleansing, and antiseptic compound may be successfully used as an antiseptic or mouth wash, the goods are not similar to and do not possess qualities different from tooth paste, and where at the time of the adoption and use of the mark by appellant, in connection with the sale of tooth paste, appellee did not contemplate the preparation and sale of a tooth paste or a mouth wash and its preparation was neither intended for nor capable of use as a tooth paste appellee should not be permitted to appropriate the business and established good will of the appellant, notwithstanding the fact that officers of the appellee company testified that they had used their preparation as a tooth wash.

Mr. F. L. Chappell for Nulyne Laboratories.

Mr. W. S. Hodges and Mr. Geo. R. Walton for Electro-Alkaline Company.

Before SMYTH, Chief Justice, and ROBB and VAN ORSDER, Associate Justices.

ROBB, J.:

Appeal from a decision of the Commissioner of Patents, in a trade-mark opposition case in which the Office refused to register "Chlorox" for appellant as a trade-mark for tooth paste, on the ground of conflict with appellee's previously registered mark "Clorox," for use on "bleaching, cleansing, and antiseptic compounds."

In February of 1915 the appellees, a corporation located at Oakland, California registered the following mark and claimed use since July 15, 1914:

According to the testimony of the president of appellee corporation, its preparation is put up in bottles and the directions thereon—

simply state what it is used for, as a germicidal, disinfectant and antiseptic and a bleach.

This witness, testifying in August of 1920, stated that for "over two years" he had used it as a "tooth wash." The testimony of the other witnesses for appellee was substantially the same, except that its Manager stated that its preparation was used—

for laundry purposes, household, creameries, hospitals, swimming pools, purification of water, bathing suits.

This witness further stated that he had used it as a tooth wash, "for probably four years, off and on," but he admitted that it never had been sold for that purpose. It further appeared that just prior to the taking of the testimony appellee had considered putting up a tooth paste and mouth wash.

Appellant, a corporation located in the city of Jackson, in the State of Michigan, filed its application in June of 1921 and alleged use since November of 1917.

We are convinced that, at the time of the adoption and use of the mark by appellant, in connection with the sale of tooth paste, appellee did not contemplate the preparation and sale of a tooth paste or mouth wash. We are further convinced, by the evidence offered for appellee, that its preparation was neither intended for nor capable of use as a tooth paste. It may be assumed that, in a sufficiently-diluted form, it may be successfully used as an antiseptic or mouth wash.

This, therefore, is a case in which the goods of the parties are dissimilar and possess different qualities and characteristics. (See *Anglo-American Incandescent Light Co. v. General Electric Light Co.*, 43 App. D. C., 385; 215 O. G., and *Fishback Soap Co. v. Kleeno Mfg. Co.*, 44 App. D. C., 6; 210 O. G., 663.) When appellant adopted its mark the field was open. In other words, there is nothing to raise a doubt as to its good faith, and we therefore do not think appellee should be permitted, at this late day, to appropriate the business and goodwill thus established. This was the view of the Examiner of Interferences, who said:

The mere fact that the goods of the opposer can be used as an essential ingredient of a tooth paste is deemed by the examiner not to justify the conclusion that tooth paste and these goods possess the same descriptive properties.

The decision appealed from is reversed.

Reversed.

Court of Appeals of the District of Columbia.

U. S. COMPRESSION INNER TUBE CO. v. CLIMAX RUBBER CO.

No. 1,579. Decided June 4, 1923.

TRADE-MARKS—ACT OF MARCH 19, 1920—NO APPEAL TO DISTRICT OF COLUMBIA COURT OF APPEALS.

The only appeal specifically provided for in the act of March 19, 1920 (section 8), being to the Commissioner of Patents from the decision of the Examiner clearly implies that Congress by omitting section 9 of the Trade-Mark Act of February 20, 1905, intended to limit the right of appeal under the present act (of March 19, 1920) to the Commissioner of Patents.

Mr. A. E. Wallace for U. S. Compression Inner Tube Co.

Mr. D. P. Wolhaupter for Climax Rubber Co.

Before SMYTH, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

VAN ORSDEL, J.:

This appeal is from a decision of the Commissioner of Patents sustaining a petition for cancellation of a trade-mark registered by appellant, United States Compression Inner Tube Company, under the act of Congress of March 19, 1920. (41 Stats. L., 533).

We are confronted with a motion to dismiss the appeal on the ground that appeal does not lie to this court from the decision of the Commissioner in cases arising under the 1920 act. The purpose of the act, as stated in the title, is—

to give effect to certain provisions of the convention for the protection of trade-marks and commercial names, made and signed in the city of Buenos Ayres, in the Argentine Republic, August 20, 1910, and for other purposes.

Previous to the enactment of this law, descriptive geographical and personal names were not subject to registration under the Trade-Mark Act of February 20, 1905, (33 Stats. L., 724), unless they had been used exclusively by the applicant for more than ten years prior to that date.

Paragraph (a) of section 1 of the 1920 act, requires the Commissioner of Patents to keep a register of trade-marks and commercial names, sent to him by the international bureaus, which are within

the protection of the Buenos Ayres agreement; and paragraph (b) provides, among other things, as follows:

All other marks not registerable under the act of February 20, 1905, as amended, except those specified in paragraphs (a) and (b) of section 5 of that act, but which had been in bona fide use for not less than one year in interstate or foreign commerce, or commerce with the Indian tribes by the proprietor thereof, upon or in connection with any goods of such proprietor,

are entitled to registration.

Appellant, by its application for registration under subsection (b), supra, concedes that the mark in issue is descriptive and, therefore, not subject to registration under the Trade-Mark Act of 1905. This brings us to the proposition presented by the motion to dismiss, whether or not appeal lies to this court from the action of the Commissioner directing the cancellation of a mark registered under the 1920 act. The right of appeal to this court from the decision of the Commissioner of Patents in trade-mark cases, is accorded by section 9 of the Trade-Mark Act of 1905, and unless appellant can establish its right to appeal under the express provisions of that act, the motion to dismiss must be sustained.

Section 6 of the 1920 act, among other things, provides:

That the provisions of sections 15, 17, 18, 19, 20, 21, 22, 23, 25, 26, 27 and 28 (as to class (b) marks only) of the act approved February 20, 1905, entitled "An act to authorize the registration of trade-marks used in commerce with foreign nations or among the several States, or with Indian tribes, and to protect the same," as amended to date, and the provisions of section 2 of the act entitled "An act to amend the laws of the United States relating to the registration of trade-marks," approved May 4, 1906, are hereby made applicable to marks placed on the register provided for by section 1 of this act.

It will be observed that section 9 of the Trade-Mark Act of 1905, providing for appeals from the decisions of the Commissioner of Patents in trade-mark opposition and cancellation proceedings to this court, is not embraced within the provisions of section 6 of the 1920 act. The only appeal specifically provided for in the act, (section 8) being to the Commissioner of Patents from the decision of the Examiner, clearly implies that Congress, by omitting section 9 of the Trade-Mark Act, intended to limit the right of appeal under the present act to the Commissioner of Patents. We are of opinion, therefore, that no right of appeal to this court has been accorded under the 1920 act, and that the motion to dismiss should be sustained.

Appeal dismissed.

Supreme Court of the United States.

CROWN DIE AND TOOL COMPANY v. NYE TOOL AND MACHINE WORKS.

No. 240. Decided February 19, 1923.

1. PATENTS—ASSIGNMENT OF CLAIMS AND RIGHTS AGAINST ONE INFRINGER ONLY—SUIT BY THE ASSIGNEE—JURISDICTION OF UNITED STATES COURT.

Where the owner of a patent executed an instrument assigning all its claims arising out of the infringement of the patent by the defendant, and all its rights of excluding the defendant from practicing the invention of the patent, the owner reserving its rights against others, and, both parties being citizens of the

same State, the defendant questioned the jurisdiction of the United States court, saying that a suit brought by the assignee under the alleged assignment does not arise under the patent laws of the United States, but is merely a suit on a contract, like one for royalties under a license, *Held* that the validity of the assignment of a patent was involved, which is a question arising under the patent laws.

2. SAME—COMMON-LAW AND STATUTORY RIGHTS OF A PATENTEE.

The Government does not confer on a patentee the right himself to make, use, or vend his own invention. Such right was a right under the common law. In its essence all that the Government confers by a patent is the right to exclude others from making, using, or vending his invention.

3. SAME—MERE RIGHT TO EXCLUDE OTHERS NOT ASSIGNABLE.

The preceding principles do not sustain the further step in the respondent's reasoning, which is that they make the mere right to exclude persons from the making, using, and vending of an invention such an interest in a patent that it can be assigned.

4. SAME—SAME—ILLEGAL DIVISION OF PATENT MONOPOLY.

An effort to divide up the monopoly of patent property, so that the patentee retains his right to make, use, and vend, but gives to many different individuals the right to sue certain named infringers, respectively, if held legal would give the patentee an opportunity without expense to himself to stir up litigation by third persons that is certainly contrary to the purpose and provisions for the assigning of patents.

5. SAME—SAME—SAME—CLAIM FOR DAMAGES FOR INFRINGEMENT NOT MERELY A CHOSE IN ACTION.

The view that the claim of an owner of a patent for damages for infringements is only a chose in action which in modern days may be so assigned that the assignee acquires full title and the right to sue at law as well as in equity without joining his assignor ignores the peculiar character of patent property and the recognized rules for the transfer of its ownership and its rules.

6. SAME—SAME—SAME—POLICY ARISING FROM PATENT STATUTES NOT SET ASIDE BY EQUITY RULE.

The equity rule under which it is urged that every action must be prosecuted in the name of the real party in interest was not intended to set aside a policy and rule having its source in the patent statutes.

7. SAME—SAME—SAME—PARTIES TO SUIT WHERE CLAIMS FOR PAST INFRINGEMENT HAVE BEEN ASSIGNED.

If the owner of the patent when the infringement took place has assigned his patents to one and his claims for damages for infringement to another, then the latter can not sue at law at all, but must compel his assignor of the claims to sue for him. In equity both such assignor and the assignee who is the real party in interest must join as plaintiffs.

ON WRIT of certiorari to the United States Circuit Court of Appeals for the Seventh Circuit.

STATEMENT OF THE CASE.

This was a bill in equity filed in the United States District Court for the Northern District of Illinois by the Nye Tool and Machine Works, a Corporation of Illinois, having its place of business in Chicago, against the Crown Die and Tool Company, a corporation of the same State and doing business in the same city. The plaintiff sought to enjoin the infringement of a patent for a machine for forming screw-thread-cutting devices, and for an accounting of profits and for damages. The inventors were Wright and Hubbard, and the patent issued to their assignee, the Reed Manufacturing Company of Pennsylvania.

The plaintiff based its right to sue on the following instrument which it terms an assignment:

EXHIBIT A.

Whereas, Reed Manufacturing Company, a corporation of Pennsylvania, is the owner of Letters Patent of the United States, No. 1,033,142, for a machine for forming screw-thread cutting devices, granted July 23, 1912, on an application of Wright and Hubbard; and

Whereas, under said patent said Reed Manufacturing Company has the right to exclude others from manufacturing, using and selling the devices of said patent; and

Whereas, it is believed by the parties that Crown Die & Tool Company, a corporation of Illinois, has been manufacturing and using devices in infringement of said patent; and

Whereas, Nye Tool & Machine Works is engaged in the manufacture of dies with which the dies made by said Crown Die & Tool Company, by the use of said infringing machine, are in competition; and

Whereas, Nye Tool & Machine Works is desirous of acquiring from Reed Manufacturing Company all of its rights of exclusion under said patent, so far as the same may be exercised against the Crown Die & Tool Company, together with all rights of the Reed Manufacturing Company against the Crown Die & Tool Company arising out of the infringement aforesaid:

Now, therefore, in consideration of one thousand dollars (\$1,000.00), and other good and valuable considerations, the receipt of which is hereby acknowledged, the Reed Manufacturing Company hereby assigns and sets over to the Nye Tool & Machine Works all claims recoverable in law or in equity, whether for damages, profits, savings, or any other kind or description, which the Reed Manufacturing Company has against the Crown Die & Tool Company arising out of the infringement by the Crown Die & Tool Company of the Wright & Hubbard patent No. 1,033,142; and, for the same consideration, assigns and sets over all the rights which it now has arising from said patent of excluding the Crown Die & Tool Company from the practice of the invention of said patent, the intention being that, in so far as concerns the exclusion of the Crown Die & Tool Company under said patent, the Nye Tool & Machine Works shall be vested with as full rights in the premises as the Reed Manufacturing Company would have had had this assignment not been made; and that the Nye Tool & Machine Works shall have the full right to bring suit on said patent, either at law or in equity against said Crown Die & Tool Company, and for its own benefit, to exclude the Crown Die & Tool Company from practicing the invention of said patent, and for its own use and benefit to collect damages which may arise by reason of the future infringement of said patent by the Crown Die & Tool Company, but nothing herein contained shall in any way affect or alter the rights of the Reed Manufacturing Company against other than the Crown Die & Tool Company; and, for the same consideration, all rights as are herein given against the Crown Die & Tool Company are given as against any successor or assignee of the business thereof.

REED MANUFACTURING COMPANY,

By P. D. WRIGHT,

Its President.

The defendant moved to dismiss the bill as follows:

Now comes the defendant, Crown Die and Tool Company, by its solicitor, and moves the Court to dismiss the bill of complaint instituted in the above entitled cause upon grounds and reasons therefor as follows:

1. That the bill of complaint states an alleged cause of action arising out of the assumed infringement of a patent in which plaintiff has no title, and prays an injunction, and accounting and damages.

2. That the owner of the entire or any part of the legal title to the patent sued on is not made a party to the suit.

3. That the legal effect of the alleged assignment set up as the basis of this cause of action and forming part of the bill of complaint herein is contrary to the statutes covering suits for infringement of patents, and shows on its face that the plaintiff has no interest in the patent sued on.

4. That the bill of complaint herein, including the alleged assignment, evidences a conspiracy against this defendant by the parties to the document identified as "Exhibit A," in which the plaintiff and the Reed Mfg. Company assumed the function of the Court in having already decreed that this defendant infringes Patent No. 1,033,142, and now seeks to utilize this Court to annoy and harass the Crown Die and Tool Company by instituting legal proceedings when no right of action exists.

5. That "Exhibit A" attached to the bill of complaint in this case purports only to convey to plaintiff all claims recoverable in law or in equity which the Reed Mfg. Co. may have against the Crown Die and Tool Co., over which subject matter this Court has no jurisdiction.

6. Prior suit pending, between the same parties in this Court, decision of which will determine any questions involved in this case.

Therefore this defendant respectfully moves the Court to dismiss said bill of complaint with its reasonable costs and charges in its behalf most wrongfully sustained.

CROWN DIE & TOOL CO.,

By FLORENCE KING,

Solicitor for Defendant.

The district judge in the interest of expedition granted the motion to dismiss in order that the main question, i. e., the plaintiff's right to sue might be determined by the circuit court of appeals before the expense of an accounting should be incurred, although he thought the plaintiff had acquired the right under the instrument. (270 Fed., 587.) The circuit court of appeals reversed the decree of dismissal, holding the instrument to be a valid assignment of an interest in the patent conferring the right to sue and remanded the cause to the district court for an accounting and further proceedings. (276 Fed., 376.)

Although the decree of the circuit court of appeals is not final, the importance of the question involved and the possible saving of useless litigation led this Court to grant the writ of certiorari before further proceedings in the district court.

Miss Florence King for Crown Die and Tool Co.

Mr. Russell Wiles for Nye Tool and Machine Works.

Mr. Chief Justice TAFT, after stating the case as above, delivered the opinion of the Court.

[1] The petitioner raises a question of jurisdiction. It says that the suit does not arise under the patent laws of the United States, but is merely a suit on a contract like one for royalties under a license of which the district court could not have jurisdiction because the parties are both citizens of the same State. To sustain this argument are cited *Albright v. Teas* (106 U. S., 613; 23 O. G., 829); *Pratt v. Paris Gas Light Company* (168 U. S., 255), and *Excelsior Wooden Pipe Co. v. Pacific Bridge Company* (185 U. S., 282; 99 O. G., 2102). The cases have no application and the point is without merit. The bill in this case is based on an assignment of a patent claimed to be valid under the statutes of the United States, and asking the protection of the patent right thus assigned by injunction and an accounting. It, therefore, involves the validity of the assignment of a patent, which is a question arising under the patent laws because it depends upon their construction, and if the assignment is valid, the suit is just an ordinary suit for injunction and profits dependent on the validity of the patent and its infringement under those same laws. There is no question of royalties by contract in the case.

The main question is an interesting one. The argument of counsel for the respondent and the one upon which the circuit court of appeals proceeded to its conclusion is that the right which the patentee derives from the Government by its grant is not the right to make, use and vend; that such a right is a so-called natural right not dependent on statute but arises under the common law and has no peculiar Federal source or protection other than any other right of liberty or property. All that the Government grants and protects is the power to exclude others from making, using, or vending during the grant of seventeen years. Under the patent law (sec. 4898 R. S.) a patentee may assign by an instrument in writing his patent or any interest therein. It is argued that as the patent is only the power to exclude all from making, using and vending, the power to exclude some particular person from doing

so is a part of that power of exactly the same nature and therefore is a definite interest in the patent that can be assigned.

[2] The analysis of the rights which a patentee acquires under the grant is sustained by a line of authorities. (*Bloomer v. McQuewan*, 14 How., 539, 548; *Patterson v. Kentucky*, 97 U. S., 501; *United States v. Bell Telephone Company*, 167 U. S., 224, 249; 79 O. G., 1362; *Bement v. National Harrow Company*, 186 U. S., 70, 90; 101 O. G., 887; *Continental Paper Bag Company v. Eastern Paper Bag Co.*, 210 U. S., 405; 136 O. G., 1297; *Heaton Peninsular Company v. Eureka Specialty Company*, 77 Fed., 288, 294; 78 O. G., 171; *Fuller v. Berger*, 120 Fed., 274.) The fullest and most satisfactory discussion of the subject is found in the *Continental Paper Bag Company v. Eastern Paper Bag Company*, supra. In that case it was sought to defeat a suit for infringement of a patent by the patentee on the ground that he was not entitled to ask a court of equity to aid him in protecting the grant of the patent to him by the Government because he had failed and neglected ever to use the patent himself or to allow anybody else to do so and therefore had not rendered to the public the benefit and consideration for which the patent was granted. This Court held that the benefit which the Government intended to secure was not the making or use of the patent for the benefit of the public during the seventeen years of the grant except as the patentee might voluntarily confer it from motives of gain, but only the benefit of its public use after the grant expired. The Court held that the Government did not confer on the patentee the right himself to make, use or vend his own invention, that such right was a right under the common law not arising under the Federal patent laws and not within the grant of power to Congress to enact such laws, and that in the absence of the express statutory imposition upon the patentee of the obligation to make, use or vend his patented invention as a condition of receiving his patent, it would not be implied. The Court further held that in its essence all that the Government conferred by the patent was the right to exclude others from making, using or vending his invention.

[3] We do not think, however, that these clearly established principles sustain the next step in the reasoning of the counsel for the respondent and the circuit court of appeals which is that they make the mere right to exclude persons from the making, using and vending of an invention such an interest in a patent that it can be assigned. It ignores the indispensable condition of the granting and establishment of a patent right and patent property that the patentee shall have himself the common-law right of making, using and vending the invention. The sole reason and purpose of the constitutional grant to Congress to enact patent laws is to promote the progress of science and useful arts by securing for limited times to inventors the exclusive right to their respective discoveries. (Art. I, sec. 8, clause 8.) In pursuance thereof, section 4886, Re-

vised Statutes, as amended (29 Stat., 692), provides that any person who has invented or discovered any new and useful art, machine, manufacture or composition of matter or any new or useful improvements thereof, upon certain conditions not important here, may obtain a patent therefor. Section 4884, Revised Statutes, directs that the grant of a patent shall be to the patentee, his heirs or assigns, for the term of seventeen years of the exclusive right to make, use and vend the invention or discovery throughout the United States. An inventor may in writing assign his invention and the right to a patent before the patent is granted, and under section 4895, Revised Statutes, a patent will issue to the assignee. Can it be claimed that an assignment of the right to exclude all from making, using and vending and excepting therefrom the right to make, use and vend in the assignee, would be such an assignment as would justify the Patent Office in issuing the patent under the statute to the assignee? Yet if all that there is in a patent property is the bare right to exclude others from making, using or vending some thing, the patent should issue in such a case.

The error in the position of the respondent and the court below is in a failure to distinguish between the property or title or interest in a patent capable of assignment and the chief incident of that property, title or interest, an incident which can only pass by assignment when attached to the right to make, use and vend. It is the fact that the patentee has invented or discovered something useful and thus has the common-law right to make, use and vend it himself which induces the Government to clothe him with power to exclude everyone else from making, using or vending it. In other words, the patent confers on such common-law right the incident of exclusive enjoyment and it is the common-law right with this incident which a patentee or an assignee must have. That is the implication of the descriptive words of the grant "the exclusive right to make, use and vend the invention." The Government is not granting the common-law right to make, use and vend, but it is granting the incident of exclusive ownership of that common-law right, which can not be enjoyed save with the common-law right. A patent confers a monopoly. So this Court has decided in the Paper Bag case, *supra*, and in many other cases. The idea of monopoly held by one in making, using and vending connotes the right in him to do that thing from which he excludes others.

Dealing with question of patent assignments under the laws of the United States, Mr. Justice Gray, in *Waterman v. Mackenzie* (138 U. S., 252, 255; 54 O. G., 1562), said:

The monopoly thus granted is one entire thing, and can not be divided into parts, except as authorized by those laws. The patentee or his assigns may, by instrument in writing, assign, grant, convey, either, 1st, the whole patent, comprising the exclusive right to make, use and vend the invention throughout the United States; or, 2nd, an individual part or share of that exclusive right; or, 3rd, the exclusive right under the patent within and throughout a specified part of the United States, Rev. St., par. 4898. A transfer of either of these three kinds of interests is an assignment, prop-

erly speaking, and vests in the assignee a title in so much of the patent itself, with a right to sue infringers; in the second case, jointly with the assignor; in the first and third cases, in the name of the assignee alone. Any assignment or transfer, short of one of these, is a mere license, giving the licensee no title in the patent, and no right to sue at law in his own name for an infringement. (Rev. St., par. 4919; *Gayler v. Wilder*, 10 How., 477, 494, 495; *Moore v. Marsh*, 7 Wall., 515.)

The learned justice then proceeds (p. 256) to give examples of what would and would not constitute an assignment. A grant of an exclusive right to make, use and vend two patented machines within a certain district, he points out citing *Wilson v. Rousseau* (4 How., 646, 686), is an assignment because the right, although limited to making, using and vending two machines excludes all other persons even the patentee from making, using or vending like machines within the district.

On the other hand [he says] the grant of an exclusive right under the patent within a certain district, which does not include the right to make, and the right to use, and the right to sell, is not a grant of a title in the whole patent right within the district, and is therefore only a license.

In *Gayler v. Wilder* (10 How., 477) it was held that the grant of an exclusive right to make and vend an article within a certain territory upon paying to the assignor a cent per pound, reserving to the assignor the right to use and manufacture the article by paying the assignee a cent per pound, was only a license and that a suit for the infringement of the patent right must be brought in the name of the assignor. The effect of the opinion in that case is that the monopoly granted the patentee is for one entire thing and in order to enable an assignee to sue he must have received the entire and unqualified monopoly in the territory specified. Chief Justice Taney's reason for this (p. 494) is useful in this case.

For [said he] it was obviously not the intention of the legislature to permit several monopolies to be made out of one, and divided among different persons within the same limits. Such a division would inevitably lead to fraudulent impositions upon persons who desired to purchase the use of the improvement, and would subject a party who, under a mistake as to his rights, used the invention without authority, to be harassed by a multiplicity of suits instead of one, and to successive recoveries of damages by different persons holding different portions of the patent right in the same place.

See also *Pope Manufacturing Co. v. Gormully Manufacturing Company* (144 U. S., 238, 250; 59 O. G., 471).

[4] These cases do not present the same facts as the one before us; but they indicate clearly what view the courts deciding them would have taken of an effort like that in the case at bar to divide up the monopoly of patent property so that the patentee retains the right to make, use and vend, but gives to many different individuals the right to sue certain named infringers, respectively, and that with the sole motive of harassing them such as is avowed in the recitals of the instrument before us. If held legal, it would give the patentee an opportunity without expense to himself to stir up litigation by third persons that is certainly contrary to the purpose and spirit of the statutory provisions for the assigning of patents.

Nor do we think that the principle of *Patterson v. Kentucky* (97 U. S., 501), or the instance of a

patent for an improvement on a machine, patent for which is held by another, involves anything inconsistent with our conclusion that the right to exclude others conferred in a patent can only be conferred upon one who has the common-law right to use, make and vend. In *Patterson v. Kentucky*, the patentee had the common-law right to make, use and vend, but the State of Kentucky exercising her lawful police power restricted him in it. In the case of the patentee for improvement on a patented machine, the patentee has the right to make, use and vend the improvement, but he can not make it profitable or useful unless he can secure the right to put it on to another machine.

For the reasons given, we think the attempted assignment in this case carried no part of the title to the patent or interest in it and therefore conferred no right to sue for damages for infringement of the patent after the execution of the instrument.

The remaining question is whether the instrument relied on by the plaintiff below gave it the right to sue in its own name in this case for damages for past infringements. We think not.

[5] The plaintiff below could not bring such a suit for past infringements without joining with it the owner of the patent when the infringements were committed. It is said that the claim of an owner of a patent for damages for infringements is only a chose in action which in modern days may be so assigned that the assignee acquires full title and the right to sue at law as well as in equity without joining his assignor. This view ignores the peculiar character of patent property and the recognized rules for the transfer of its ownership and its incidents. Patent property is the creature of statute law and its incidents are equally so and depend upon the construction to be given to the statutes creating it and them, in view of the policy of Congress in their enactment. This is shown by the opinion of this Court in *Waterman v. McKenzie* (138 U. S., 252), already cited, and in the line of authorities followed therein. It is not safe, therefore, in dealing with a transfer of rights under the patent law to follow implicitly the rules governing a transfer of rights in a chose in action at common law. As Chief Justice Taney said in *Gayler v. Wilder* (10 How., 477, 494):

The monopoly did not exist at common law, and the rights, therefore, which may be exercised under it cannot be regulated by the rules of the common law. It is created by the act of Congress; and no rights can be acquired in it unless authorized by statute, and in the manner the statute prescribes.

The law as to who should bring a suit at law for damages by infringement of a patent is clearly and correctly stated in Robinson on Patents (Vol. III, sec. 937), as follows:

With a single exception the plaintiff in an action at law must be the person or persons in whom the legal title to the patent resided at the time of the infringement. An infringement is an invasion of the monopoly created by the patent, and the law which defines and authorizes this monopoly confers only upon its legal owners the right to institute proceedings for its violation. These owners are the patentee, his assignee, his grantee, or his personal representatives; and none but these are able to maintain an action for infringement in a court of law. Moreover, the injury inflicted by an act of infringement

falls upon the individual who owns the monopoly at the date of the infringement. It does not affect former owners whose interest had terminated before the infringement was committed, nor does it so directly prejudice a future owner that the law can recognize his loss and give him a pecuniary redress. Hence the plaintiff must not only have a legal title to the patent, but must have also been its owner at the time of the infringement. The exception above referred to arises where an assignment of a patent is coupled with an assignment of a right of action for past infringements. In this case the present owner of the monopoly may institute proceedings for its violation during the ownership of his assignor as well as for infringements committed since the transfer of the title to himself.

In *Moore v. Marsh* (7 Wall., 515) the question was whether a sale and assignment by a patentee of his patent right was, under the fourteenth section of the Patent Act of 1836 (ch. 357, 5 Stat., 117, 123) now embodied in section 4919 of the Revised Statutes, a bar to an action by him to recover damages for an infringement committed before such sale and transfer. The section provided:

And such damages may be recovered by action on the case, in any court of competent jurisdiction, to be brought in the name or names of the person or persons interested, whether as patentees, assignees, or as grantees of the exclusive right within and throughout a specified part of the United States

The neat issue in that case was whether "the name or names of the person or persons interested" meant the person interested when the infringement took place or when the suit was brought. The Court held that it meant the person who was patentee, assignee, or grantee when the infringement occurred and the cause of action accrued. The Court held, therefore, that the proper plaintiff in a suit for past infringements was not the present owner of the patent, and that he did not acquire the right to bring suits for prior infringements merely by the conveyance of the full title to the patent and its enjoyment. This case was followed by that of *Gordon v. Anthony*, on the circuit reported in 16 Blatchford, 234; 16 O. G., 1135; S. C. 10 Fed. Cases, 773, case No. 5.605. The decision was by Blatchford, circuit judge of the second circuit, who had been district judge and who subsequently became a justice of this Court and had great experience in the administration of the patent law.

The question before him was whether the vendee and assignee of a receiver appointed by a State court of New York in proceedings supplementary to execution on a judgment against a debtor whose assets included a patent right and who was directed by the court to convey the same to the receiver but did not do so, could sue for damages for infringement of the patent occurring before the receivership. After saying that under the law of 1836 and under the Revised Statutes in which the sections of that law were embodied, no one could bring a suit either at law or in equity for infringement of a patent in his own name alone unless he were patentee, assignee, or grantee, the judge continues:

A claim to recover profits or damages for past infringement can not be severed from the title by assignment or grant, so as to give a right of action for such claim, in disregard of the statute. The profits or damages for infringement can not be sued for except on the basis of title as patentee, or as such assignee or grantee, to the whole or a part of the patent, and not on the basis merely of the assignment of a right to a claim for profits and damages, severed from such title. Therefore, if, in the

present case, no such assignment or grant has been made to the defendants as the statute contemplates, they could not bring suit, in their own names, under the assignment made to them, to recover any claims, profits or damages for infringement, which belonged to Gordon (i. e., the patentee), nor can they use the assignment as a defense against any such claims existing against themselves in favor of Gordon. In this case there has been no assignment executed by Gordon.

See also *Ball v. Coker* (168 Fed., 304, 307). Counsel for plaintiff cites *Hayward v. Andrews* (12 Fed., 786) to maintain the contrary and to sustain the right of the assignee of claims for past infringements to maintain suit. The case cited is not in point, the assignee in that case held the legal title to the patent.

The sole exception to the rule that only he who is the owner of the patent at the time of the infringement can sue for damages to which Professor Robinson refers is when such owner assigns the patent and also the claim for past infringements to the same person. In such a case, as the title and ownership of the claims are united, it is held that the owner may sue. (*Dibble v. Augur*, 7 Blatchford, 86; 7 Fed. Cases, 642, case No. 3,879; *Hamilton v. Rollins*, 5 Dill., 495; 11 Fed. Cases, 364, case No. 5,988; *Henry v. Frankestown Soapstone Stove Co.*, 2 Ban. & A., 221; 11 Fed. Cases, 1,180, case No. 6,382; 9 O. G., 408; *Consolidated Oil Well Packer Co. v. Eaton, Cole & Burnham Company*, 12 Fed. Rep., 865, 870; *Spring v. Domestic Sewing Machine Co.*, 13 Fed., 446, 449; 22 O. G., 1445; *Nellis v. Pennock Mfg. Co.*, 38 Fed., 379.) Under this exception, therefore, if the instrument here relied on had been effective to make the plaintiff an assignee or grantee of the patent or "of any interest therein" within the meaning of section 4898, Revised Statutes, as amended, then the plaintiff could have maintained this action for damages for infringements prior to the execution of the instrument; but as we hold, the instrument did not have this effect.

[6, 7] But it is urged that under equity rule 37 every action must be prosecuted in the name of the real party in interest, and, therefore, as the plaintiff is the beneficial owner of the claims for past infringements, it should be permitted to sue in a court of equity. The equity rule was not intended to set aside a policy and rule having its source in the patent statutes and can not affect this case. The rule laid down by Circuit Judge Blatchford in *Gordon v. Anthony*, supra, applied to both actions in equity and law and grew out of the sections of statutes quoted by him and not since amended. Both at law and in equity, either the owner of the patent at the time of the past infringement, or the subsequent owner of the patent who is at the same time the assignee of the claims for past infringement, must be a party to a suit for damages for the past infringement. If the owner of the patent when the infringements took place has assigned his patent to one, and his claim for damages for infringement to another, then the latter can not sue at law at all but must compel his assignor of the claims to sue for him. In equity both such assignor and the assignee who is the real party in interest

must join as plaintiffs. Such assignor is a necessary party and a bill for accounting and damages is fatally defective otherwise. (*Robinson*, Vol. III, sec. 1099; *Dibble v. Augur*, 7 Blatchford, 86; 7 Fed. Cases, 642, case No. 3,879; *Gamewell Fire Alarm Telegraph Co. v. City of Brooklyn*, 14 Fed. Rep., 255; 22 O. G., 1978; *Ball v. Coker*, 168 Fed., 304.) As the owner of the patent is not a party to this bill, the result is that on no ground can the bill of the plaintiff be sustained and that the motion to dismiss should have been granted.

The decree of the circuit court of appeals is reversed and that of the district court is affirmed.

PATENT SUITS.

[Notices under section 4921, Revised Statutes, as amended February 18, 1922.]

762,850, J. H. Silley, Doors for furnaces, etc., suit filed Aug. 30, 1920, U. S. D. C., S. D. N. Y., Doc. E 18/383, *J. H. Silley v. J. Reid and J. Reid & Co., Inc.* Assent decree sustaining patent, adjudging infringement by J. Reid. Bill dismissed as to defendant J. Reid & Co., Inc.

793,249, L. M. Todd, Printing apparatus, suit filed Apr. 25, 1917, U. S. D. C., W. D. N. Y., Doc. B 205, *Todd Protectograph Co. v. Hall-Welter Co., Inc.* Case settled by decree.

811,859, A. L. Marsh, Electric resistance material, consent decree sustaining patent, adjudging infringement and granting perpetual injunction, U. S. D. C., S. D. N. Y., *Hoskins Mfg. Co. et al. v. Bencoe Exporting & Importing Co.* Same, order of dismissal filed May 1, 1923, on motion of plaintiffs, U. S. D. C., W. D. Wash., *Hoskins Mfg. Co. et al. v. Everglo Electric Mfg. Co.* Same, order of dismissal filed May 10, 1923, on motion of plaintiffs, U. S. D. C., W. D. Wash., *Hoskins Mfg. Co. et al. v. Bestov Mfg. Co.*

819,042, A. Cummings, Underreamer for mineral boring; 827,595, E. C. Wilson, Underreamer, suit filed Aug. 21, 1922, U. S. D. C., S. D. Calif., Doc. G 23, *A. Cummings v. Wilson & Willard Mfg. Co. et al.* Bill dismissed with costs against plaintiff, but plaintiff may recover costs of counterclaim.

TRADE-MARKS

OFFICIAL GAZETTE, JULY 17, 1923.

[Vol. 312. No. 3.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 131,735. (CLASS 12. CONSTRUCTION MATERIALS.) THE JENNISON-WRIGHT Co., Toledo, Ohio. Filed Apr. 28, 1920.

SuperBlox

Particular description of goods.—Pavements and Floors and Materials Therefor, Including Elements of Brick, Block, or Tile Forms.

Claims use since February, 1920.

Ser. No. 131,736. (CLASS 12. CONSTRUCTION MATERIALS.) THE JENNISON-WRIGHT Co., Toledo, Ohio. Filed Apr. 28, 1920.

JENOLITE

Particular description of goods.—Floors and Pavements of Wood Plank, Timbers, or Block, Cement, Asphalt, Bituminous Composition Floors and Pavements, Composition Surfacing Material, Coatings for Floors and Pavements, Mastics for Floors and Pavements, Aseptic and Hydrocarbon Preservative Impregnations for Floors and Pavements, and the Mastic, Waterproofing Wood, and Mineral Materials for the Foregoing.

Claims use since October, 1919.

Ser. No. 135,121. (CLASS 39. CLOTHING.) WILSON BROTHERS, Chicago, Ill. Filed July 17, 1920.

Particular description of goods.—Hosiery.
Claims use since about the year 1908.

Ser. No. 135,737. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) GEORGE A. STAFFORD, doing business as G. A. Stafford & Co., New York, N. Y. Filed Aug. 2, 1920.

Particular description of goods.—Woven Cotton Fabrics in the Piece.

Claims use since Dec. 1, 1913.

Ser. No. 143,464. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ST. FIRO REMEDY Co., Newark, N. J. Filed Feb. 11, 1921.

Particular description of goods.—Healing Creams for Eczema.

Claims use since Sept. 16, 1920.

Ser. No. 143,773. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MEDOC DISTRIBUTING COMPANY, New York, N. Y. Filed Feb. 18, 1921.

MEDOC

Particular description of goods.—Pharmaceutical Preparations Consisting of Tonics Having Therapeutic Medicinal Values for the Relief of Dyspepsia and Indigestion.
Claims use since on or about Sept. 21, 1920.

Ser. No. 148,615. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) THE WILLIAM PRYM COMPANY, LIMITED, Stolberg, Germany. Filed June 3, 1921.

The words "Absolument Garanti Contre la Rouille" are disclaimed apart from the mark shown in the drawing.

Particular description of goods.—Bone Stiletos, Hooks and Eyes, Corset Eyes, Double Eyes, Shoe Eyes, Snap Fasteners, Shoe Buckles Not Made of Precious Metals, Waistband Clasps, Waist and Corset Clasps; Snap Fasteners on Tape and Hooks and Eyes on Tape for Fastening Waists, Skirts, Plackets, Dresses, and Other Articles of Clothing; Waist-Belt Clasps, Dress Holders Such as Large Snap Fasteners Used for Supporting Articles of Clothing, Shoe Buttoners, Glove Buttoners, Thimbles and Buttons Not Made of Precious Metals, Collar Supporters, Needles, Pins without Ornamentation and Not Made of Precious Metals, and Ornamented Hairpins Not Made of Precious Metals.

Claims use since Jan. 27, 1913.

Ser. No. 152,294. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE WILLIAM A. WEBSTER COMPANY, Memphis, Tenn. Filed Aug. 27, 1921.

REISSUES.

JULY 17, 1923.

15,653. LIGHTNING ARRESTER. CHESTER T. ALLCUTT, Wilkensburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 14, 1922. Serial No. 600,972. Original No. 1,361,801, dated Dec. 14, 1920, Serial No. 189,348, filed Sept. 1, 1917. 20 Claims. (Cl. 175—30.)

6. The method of forming a member for a lightning arrester which consists in molding an insulating support containing a phenolic condensation product and thereafter molding integrally therewith an electrical conducting portion comprising a comminuted conducting material and a binder therefor that serves to autogenously unite with said insulating support.

9. A protector comprising a pair of electrodes, one of said electrodes comprising a conducting member and the other comprising a non-conducting portion and a conducting portion autogenously connected thereto, the surface of said conducting portion being countersunk relatively to the corresponding surface of the insulating portion and being separated therefrom by means of a groove.

11. A discharge electrode for a lightning arrester comprising a plurality of refractory conducting particles held in a binder of phenolic condensation product.

18. A resistance element, comprising a bakelite bar having finely divided graphite embedded therein.

15,654. LINGERIE CLIP. EMMA EVANS CLARK, Hammond, Ind., assignor to The Wilson Fastener Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 24, 1923. Serial No. 627,458. Original application filed Mar. 22, 1920, Serial No. 367,913. Renewed May 14, 1921, Serial No. 469,495. Original No. 1,383,906, dated July 5, 1921. 10 Claims. (Cl. 24—259.)

1. A lingerie-clip comprising a U-shaped resilient body with a snap fastener of the stud and socket type carried respectively by the two limbs of the body entirely between such limbs and adjacent the free edges thereof.

15,655. STUMP HARVESTER. EDWIN A. MCKOY and GEORGE D. MOORE, New Orleans, La. Filed May 20, 1921. Serial No. 471,259. Original application filed Sept. 21, 1917, Serial No. 192,566. Renewed July 9, 1919, Serial No. 309,766. Original No. 1,313,708, dated Aug. 19, 1919. 31 Claims. (Cl. 144—2.)

1. In a stump harvester, a dirigible power plant, a boring tool comprising a cutter head having a recess

opposite its cutting surface, a housing forming with the recess a chamber to receive the cuttings and means

to discharge the cuttings from the housing to a predetermined depository.

15,656. LANDING GEAR FOR AIRPLANES. JEAN A. ROCHE, Dayton, Ohio. Filed Apr. 15, 1921. Serial No. 461,600. Original No. 1,329,477, dated Feb. 3, 1920, Serial No. 279,050, filed Feb. 25, 1919. 8 Claims. (Cl. 244—2.)

1. In a landing gear, a main frame carrying fore and aft extensions, an auxiliary frame carrying corresponding fore and aft extensions, said auxiliary frame being slidably mounted in said main frame, and a resilient cable engaging over the lower edges of the first-mentioned fore and aft extensions and over the upper edges of the second-mentioned fore and aft extensions.

15,657. HERNIAL TRUSS. GEORGE A. McMILLEN, Alton, Ill. Filed Mar. 13, 1919. Serial No. 282,513. Original No. 1,237,667, dated Aug. 21, 1917, Serial No. 149,612, filed Feb. 19, 1917. 26 Claims. (Cl. 128—104.)

3. A hernial truss, comprising, a supporting band, a pad mounted for movement thereon, means for selectively

- 62,662. HOLDER FOR ILLUMINATING GLASSWARE.
HARRY C. ADAM, St. Louis, Mo. Filed May 13, 1922.
Serial No. 2,227. Term of patent 14 years.

The ornamental design for a holder, for illuminating glassware, as shown.

- 62,663. DISPLAY CABINET. JOHN T. ASHBROOKE,
New York, N. Y., assignor to The Bonnie-B Company,
Inc., a Corporation of New York. Filed July 20, 1921.
Serial No. 486,274. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a display cabinet, as shown.

- 62,664. MIRROR, BRUSH, OR SIMILAR ARTICLE.
WILLIAM S. BECHTOLD, Newark, N. J. Filed Dec. 31,
1921. Serial No. 526,400. Term of patent 14 years.

The ornamental design for a mirror, brush, or similar article, as shown.

- 62,665. TRIMMING FOR GARMENTS AND SIMILAR
ARTICLES. CONRAD J. FUSCH, Wyomissing, Pa., as-
signor to The Narrow Fabric Co., West Reading, Pa.,
a Corporation of Pennsylvania. Filed Mar. 10, 1922.
Serial No. 1,102. Term of patent 14 years.

The ornamental design for a trimming for garments and similar articles as shown.

- 62,666. LIGHTING FIXTURE. HARRY C. ADAM, St.
Louis, Mo. Filed Dec. 15, 1921. Serial No. 522,706.
Term of patent 14 years.

The ornamental design for a lighting fixture, as shown.

62,667. AUTOMOBILE TIRE. JACKSON D. COMSTOCK, Chester, W. Va. Filed Dec. 11, 1922. Serial No. 4,567. Term of patent 14 years.

The ornamental design for an automobile tire as shown.

62,668. WASTEBASKET. MARTHA HALOWELL CONNOR, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Oct. 19, 1922. Serial No. 4,032. Term of patent 14 years.

The ornamental design for a wastebasket or similar receptacle, as shown.

62,669. DISPLAY STAND FOR HOSE CLAMPS. ADOLPH E. FEIGE, Hackensack, N. J., assignor to Universal Industrial Corporation, Hackensack, N. J., a Corporation of Delaware. Filed Oct. 19, 1922. Serial No. 4,027. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a display stand for hose clamps, as shown.

62,670. METAL BASKET OR SIMILAR ARTICLE. WILLIAM GEIB, Meriden, Conn., assignor to International Silver Company, Meriden, Conn., a Corporation of New Jersey. Filed Oct. 24, 1922. Serial No. 4,074. Term of patent 7 years.

The ornamental design for a metal basket, or similar article as shown.

62,671. RUBBER BOOT. ALFRED A. GLIDDEN, Watertown, Mass., assignor to Hood Rubber Company, Watertown, Mass., a Corporation of Massachusetts. Filed Jan. 12, 1923. Serial No. 4,866. Term of patent 14 years.

The ornamental design for a rubber boot, as shown.

62,672. LOUD-SPEAKING TELEPHONE RECEIVER. GEORGE R. LUM, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 12, 1922. Serial No. 3,703. Term of patent 14 years.

The ornamental design for a loud speaking telephone receiver, as shown.

62,673. PLATE FOR LIGHTING FIXTURES. GLENN E. McFADDEN, Lakewood, Ohio. Filed Oct. 14, 1922. Serial No. 3,973. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a plate for lighting fixtures, as shown.

62,674. SPECTACLES DISPLAY HOLDER. ARTHUR MENG, Cleveland, Ohio. Filed Sept. 11, 1922. Serial No. 3,684. Term of patent 7 years.

The ornamental design for a spectacles display holder, as shown.

62,675. PITCHER. ANDREW J. SANFORD, Newark, Ohio, assignor to A. H. Heisey & Co., Newark, Ohio. Filed June 17, 1921. Serial No. 478,452. Term of patent 14 years.

The ornamental design for a pitcher, as shown.

62,676. LAMP SHADE. GEORGE I. SCHLEY, Chicago, Ill. Filed Oct. 16, 1922. Serial No. 3,990. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a lamp shade, as shown.

62,677. TOY ANIMAL. ELIZABETH A. TICHLER, Paterson, N. J. Filed Nov. 15, 1922. Serial No. 4,299. Term of patent 7 years.

The ornamental design for a toy animal, as shown.

62,678. COMBINED LAMP AND BOOKRACK. ALBERT S. TRASK, Concord, N. H. Filed Sept. 8, 1922. Serial No. 3,654. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a combined lamp and book rack, as shown.

62,679. BOWL OR SIMILAR ARTICLE. HYMAN WANERMAN, New York, N. Y. Filed Sept. 28, 1922. Serial No. 3,837. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a bowl or similar article, as shown.

- 62,680. BOWL OR SIMILAR ARTICLE. HYMAN WANERMAN, New York, N. Y. Filed Sept. 28, 1922. Serial No. 3,838. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a bowl or similar article, as shown.

- 62,681. PLATE FOR LIGHTING FIXTURES. PERCY S. WARMAN, Roselle, N. J., assignor to Alfred Vester Sons, Inc., Providence, R. I., a Corporation of Rhode Island. Filed Feb. 24, 1922. Serial No. 883. Term of patent 7 years.

The ornamental design for a plate for lighting fixtures, as shown.

- 62,682. TIRE TREAD. EDWIN P. WEBER, Chicago, Ill. Filed Jan. 6, 1922. Serial No. 67. Term of patent 7 years.

The ornamental design for a tire tread, as shown.

- 62,683. TALCUM-POWDER BOX. CARL WEEKS, Des Moines, Iowa. Filed June 5, 1922. Serial No. 2,535. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a talcum powder box, as shown.

- 62,684. PERFUME BOTTLE. CARL WEEKS, Des Moines, Iowa. Filed June 5, 1922. Serial No. 2,534. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a perfume bottle, as shown.

62,685. BILLIARD TABLE. CHARLES A. WENDT, Milwaukee, Wis. Filed Sept. 30, 1922. Serial No. 3,849. Term of patent 14 years.

The ornamental design for a billiard table, as shown.

62,686. DIRECTION SIGNAL. CHARLES D. WIEMER, Los Angeles, Calif. Filed June 19, 1922. Serial No. 2,731. Term of patent 7 years.

The ornamental design for a direction signal, as shown.

PATENTS

GRANTED JULY 17, 1923.

1,461,717. SEGMENT CARRIER FOR TYPEWRITING MACHINES. FRANK H. ARMSTRONG, Auburn, N. Y., assignor to Corona Typewriter Company, Inc., Groton, N. Y., a Corporation of New York. Filed Dec. 30, 1919. Serial No. 348,326. 24 Claims. (Cl. 197-74.)

1. In a typewriting machine a vertically shiftable segment carrying member, vertically arranged raceways at the ends of said carrying member, relatively stationary complementary raceways mounted in the machine frame, anti-friction balls arranged in said raceways, and individual ball retainers to receive the balls and connected at one of their ends to the relatively stationary raceways and at their other ends to the vertically shiftable member whereby the balls will have a vertical movement with the vertically shiftable member and will be maintained in their proper relative positions in the raceways.

1,461,718. TYPEWRITING MACHINE. FRANK H. ARMSTRONG, Auburn, N. Y., assignor to Corona Typewriter Company, Inc., Groton, N. Y., a Corporation of New York. Filed Sept. 17, 1920. Serial No. 410,960. 22 Claims. (Cl. 197-72.)

2. In a typewriting machine, the combination of a frame, a vertically shiftable type-segment support having two ball channels facing toward one side of the machine and a third ball channel facing toward the opposite side of the machine, stationary means on the frame having ball channels facing inwardly and cooperating with said first two channels on the support to form ball races, a shiftable raceway member having an inwardly facing ball channel cooperating with said third ball channel on the support to form a ball race, anti-friction balls in the races, and a spring urging said movable raceway member inwardly transversely of the machine.

1,461,719. TYPEWRITING MACHINE. FRANK H. ARMSTRONG, Auburn, N. Y., assignor to Corona Typewriter Company, Inc., Groton, N. Y., a Corporation of New York. Filed Feb. 12, 1921. Serial No. 444,448. 27 Claims. (Cl. 197-72.)

1. In a typewriting machine, the combination of a main frame, a support shiftable relatively to the main frame to vary the relation between printing instrumentalities and a platen and provided with a plurality of ball channels spaced apart transversely of the main frame, a frame part extending transversely of the main frame, a plurality of members shiftable held to said frame part and each provided with a ball channel cooperating with one of the channels on the support, means carried by said frame part for adjusting said members, balls in the raceways formed by the cooperating channels on the support and members, and means detachably holding said frame part to the main frame.

1,461,720. TYPEWRITING MACHINE. FRANK H. ARMSTRONG, Auburn, N. Y., assignor to Corona Typewriter Company, Inc., Groton, N. Y., a Corporation of New York. Filed Feb. 21, 1921. Serial No. 446,535. 37 Claims. (Cl. 197-72.)

1. In a typewriting machine, the combination of a support having a plurality of resilient portions adjacent both ends thereof, a type-bar segment on the support, a plurality of guides at each end of the support, each of said resilient portions of the support cooperating with a different guide, and key-operated means for shifting the support.

1,461,721. CAR ROOF. CHARLES DAVID BONSALL, Pittsburgh, Pa., assignor to P. H. Murphy Company, New Kensington, Pa. Filed June 30, 1922. Serial No. 572,063. 20 Claims. (Cl. 108-5.4.)

1. A metal car roof comprising a series of transverse stiffening ribs alternating with other stiffening ribs that are deepest adjacent to the eaves.

1,461,722. WATER-LEVEL INDICATOR FOR AUTOMOBILE RADIATORS. HARRISON H. BOYCE, Forest Hills, N. Y. Filed Mar. 29, 1916. Serial No. 87,422. 9 Claims. (Cl. 73—82.)

1. A water level indicator for automobile radiators comprising a frame having at its opposite faces portions through which the interior of the casing is exposed to view and adapted to be mounted upon a radiator cap, a target having a limited movement within said frame, and observable from both faces thereof, a float adapted to be inserted thru the filling neck of a radiator, and means operatively connecting said float and said target.

2. Means for indicating to the driver of an automobile the level of the cooling water within the radiator thereof comprising the combination with the radiator of a float therein, a frame mounted upon the radiator cap having a sight opening intermediate the upper and lower portions thereof, and in the direction of vision of the driver, and indicating means within said frame operatively connected to said float and movable therewith, said indicating means including a distinctive portion normally concealed from view by said frame and adapted to be moved into position to be seen through said opening when the water level changes.

1,461,723. FLOOR WAXER AND POLISHER. JAMES G. BROOKS, Omaha, Nebr. Filed June 30, 1922. Serial No. 572,070. 5 Claims. (Cl. 91—43.)

1. In combination, a wax dispensing receptacle consisting of a perforated base-plate having upright walls and provided inwardly of said upright walls with a wax-container, a bearing-plate provided with guides and disposed in the wax-container, springs on the guides, a yoke engaging the springs and traversed by the guides, a lid on the wax-container provided with a slot and traversed by said guides, and a rack-bar in the slot of

the lid, said rack-bar being pivotally mounted on the yoke and movable for moving the bearing-plate inwardly of the wax-container, subject to the resistance of said springs.

1,461,724. MACHINE FOR THE MANUFACTURE OF WALL BOARD. SIMON COOPER, Brooklyn, N. Y., assignor to Allison Bishopric, Cincinnati, Ohio. Filed Apr. 3, 1920. Serial No. 371,004. 40 Claims. (Cl. 154—1.)

1. In a wall board machine, cooperating press rolls, means for feeding between said rolls a web supplied on one face thereof with adhesive, means for supplying laths in spaced relation to the adhesive side of said web and including pins on one of the rolls for temporarily holding the laths in spaced relation and means for spacing and impaling the laths in such spaced relation on said pins.

1,461,725. LOCK. THOMAS C. COOPER, Chicago, Ill. Filed July 18, 1918. Serial No. 245,447. 1 Claim. (Cl. 70—108.)

A lock comprising an embracing member provided with teeth, a locking member in the form of a one-piece casting adapted to fit said embracing member and to be moved therealong into engagement with the article to be clamped, a chamber in said casting, a plurality of guides integral with said member and projecting into said chamber, sleeves slidably mounted within said guides, locking bolts slidably mounted in said sleeves, means for yieldingly maintaining said bolts normally projected through the end walls of said member into engagement with the teeth of said embracing member, means for limiting the forward and reverse movements of said bolts, key-controlled mechanism, means connecting said sleeves therewith whereby said sleeves and bolts

may be retracted, and a cover for said parts, the side walls of said member being designed to snugly fit the article clamped whereby access to said cover and said parts is effectively obstructed.

- 1,461,726. AUTOMOBILE RADIATOR CONDENSER. HAROLD L. CRAFTS, Rochester, N. Y. Filed Apr. 15, 1921. Serial No. 461,731. 5 Claims. (Cl. 257—25.)

1. A condenser having a condensing chamber provided with an inlet at its bottom, a seal for collecting the condensed matters, said seal communicating with the inlet so that the overflow from the seal flows to the inlet.

- 1,461,727. ENVELOPE. WALTER H. DEUBENER, St. Paul, Minn. Filed Mar. 19, 1920. Serial No. 367,129. 6 Claims. (Cl. 229—84.)

1. An envelope comprising a pair of members, a cover closure flap hinged to one of said members, a pair of circular locking tongues extending from the edges of one of said members, arcuate slots formed along the perimeter of portions of said locking tongues and slots formed in said other member adapted to cooperate with said locking tongues.

- 1,461,728. METHOD OF FORMING HAIRPINS. MILTON A. FISHEL, New York, N. Y. Filed June 11, 1921. Serial No. 476,798. 5 Claims. (Cl. 29—160.6.)

1. The method of manufacturing a hair pin which consists in forming a substantially U-shaped blank having at

its adjacent ends a surplus amount of metal, upsetting the surplus amount of metal to provide prong-receiving elements, providing prong-receiving pockets within the prong-receiving elements, and securing within said pockets a pair of prongs.

- 1,461,729. METHOD OF FORMING SHEET-METAL BARREL CHIMES. HENRY J. FOSTER and OWEN THOMAS, Cleveland, Ohio, assignors to The Hydraulic Pressed Steel Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 11, 1919. Serial No. 303,458. 1 Claim. (Cl. 113—112.)

The herein described method of forming sheet metal barrel chimes which consists in folding back the head providing an integral chime composed of inner and outer members, connecting said members by brazing, then folding inwardly the outer end of the chimes so constructed, and finally brazing the folded end to the barrel head.

- 1,461,730. PRESSURE-GAUGE MECHANISM. CARL H. GRAESSER, Bridgeport, Conn., assignor to Manning, Maxwell & Moore, Inc., New York, N. Y., a Corporation of New Jersey. Filed May 5, 1921. Serial No. 466,952. 6 Claims. (Cl. 73—109.)

1. A gauge comprising a casing, a Bourdon tube therein, index means, a lever interposed between said tube and said index means, and spaced stop elements engageable with said lever for positively limiting the arc of movement thereof.

- 1,461,731. TYPEWRITING MACHINE. EDWIN L. HARMON, Groton, N. Y., assignor to Corona Typewriter Company, Inc., Groton, N. Y., a Corporation of New York. Filed Sept. 17, 1920. Serial No. 410,947. Renewed Jan. 18, 1923. 25 Claims. (Cl. 197—72.)

1. In a typewriting machine, the combination of a vertically shiftable type support, a lever extending transversely of the machine and connected at its inner end to said support, means pivotally supporting said lever intermediate its ends to swing in a vertical plane, a spring

connected with said lever to normally hold the type support in elevated position, and a key-operated lever fulcrumed intermediate its ends extending fore and aft of

the machine and loosely engaging under the outer end of said transversely extending lever at the rear of the fulcrum of the key-operated lever.

1,461,732. DUMP CAR. HARRY S. HART, Chicago, Ill. Filed Aug. 4, 1921. Serial No. 489,700. 5 Claims. (Cl. 105-249.)

1. A dump car having sides, ends and a floor, the floor portions intermediate the car trucks comprising hoppers having floors sloping downwardly from the trucks, said floor portions terminating above the trucks in lines transverse of the car, and downwardly extending vertical walls on such lines, the remainder of the floor between said lines and the ends of the car being located below the plane of said floor portions.

1,461,733. PROPELLING DEVICE FOR AIRCRAFT. HERBERT E. HAWES, Milwaukee, Wis. Filed Oct. 26, 1921. Serial No. 510,448. 24 Claims. (Cl. 170-163.)

1. In an aircraft, a propeller device comprising a rotary driving shaft; a frame carried thereby; counter shafts longitudinally reciprocally carried by said frame, their axes transverse of, and offset from, the axis of the power shaft; propeller blades carried by said counter shafts and projecting outwardly from the frame; means to rotate the driving shaft; and intermediate means controllable by the aviator to intermittently operatively connect the driving shaft with the counter shafts to longitudinally

reciprocate them to desired extent in either one of opposite directions independently of speed, or direction, of

rotation of the driving shaft thereby correspondingly lengthening or shortening the projection of the blades from the frame.

1,461,734. TYPEWRITING MACHINE. OTTO PETERMANN, Groton, N. Y., assignor to Corona Typewriter Company, Inc., Groton, N. Y., a Corporation of New York. Filed July 28, 1920. Serial No. 399,567. 21 Claims. (Cl. 197-74.)

1. In a typewriting machine, the combination of a support shiftable edgewise to change case, a centrally arranged guide at one face of the support, resilient guides spaced apart transversely of the path of movement of the support at the other face of said support and located at opposite sides of the centrally arranged guide, rolling elements between the opposite faces of the support and said guides, and adjustable means for holding the resilient guides against the rolling elements contacting therewith under tension.

1,461,735. MOTOR VEHICLE. KARL R. PETERS, Philadelphia, Pa. Filed Feb. 9, 1922. Serial No. 535,367. 2 Claims. (Cl. 180-26.)

1. A motor vehicle comprising a vehicle frame, a steering head mounted upon the frame, a steering post pivoted

within the steering head, a transverse plate rigidly secured to the lower end of the steering post, a steering wheel, an axle carrying the steering wheel, bearings arranged upon opposite sides of the steering wheel and holding the axle, each bearing extending upon opposite sides of the axle, a pair of upstanding guide rods rigidly mounted upon the ends of the bearing upon each side of the wheel and arranged upon opposite sides of the axle, a pair of tubes arranged upon each side of the wheel and slidably receiving the guide rods and rigidly mounted upon the transverse plate near its side and near its front and rear portions, said rods and tubes being spaced, a cap rigidly mounted upon each bearing at a point near the center of the bearing and between the rods, a compressible coil spring having its lower end held within the cap, a depending rod rigidly connected with the transverse plate between each pair of depending tubes and extending into the coil spring, and a cap carried by the depending rod and engaging the opposite end of the spring.

1,461,736. COLLAPSIBLE SPOOL. WILLIAM A. PRENTISS, Holyoke, Mass. Filed Dec. 4, 1922. Serial No. 604,871. 10 Claims. (Cl. 242—115.)

1. A spool for the purpose described, comprising a fixed and a removable head, the fixed head having a plurality of arc-shaped members movably engaging the same and movable relative thereto, one of the ends of these members having inclined surfaces, the removable head having a co-operating inclined surface to force or move the arc-shaped members outward on the fixed head when the removable head is clamped thereto.

1,461,737. MEANS FOR FEEDING ADHESIVE MATERIAL TO BOX-MAKING MACHINES. JACOB RUMNICK, New York, N. Y. Filed Sept. 24, 1920. Serial No. 412,558. 2 Claims. (Cl. 137—78.)

1. An apparatus of the class described, embodying a plurality of box making machines each provided with a hopper and with means for supplying an adhesive to material adapted to be manipulated by an attendant, an adhesive feed tank in elevated relation to said box making machines, a feed pipe adjacent the hoppers of said machines, said feed pipe having means for controlling the distribution of adhesive material to the hoppers of the individual machines, and a stand pipe connected to the tank and to the feed pipe for establishing the head or pressure required to feed the adhesive material to said feed pipe and said distributing means.

1,461,738. REDUCING VALVE. JOHN RUMPF, Jersey City, N. J., assignor to The Safety Car Heating & Lighting Company, a Corporation of New Jersey. Filed Jan. 28, 1919. Serial No. 273,589. 16 Claims. (Cl. 50—23.)

1. In a reducing valve, in combination, a pressure chamber, a valve seat therein, a diaphragm closing one side of said chamber, a valve controlling member movable with said diaphragm, and a separate valve member having means biasing it away from said seat, and adapted to be pressed by said controlling member against said seat.

10. In a reducing valve, in combination, a pressure chamber having an outlet connected thereto, a diaphragm therefor and having an opening therein, a valve for said chamber, means forming a connection between said diaphragm and said valve and having a shoulder adapted normally to contact with said diaphragm thereby to seal said opening in said diaphragm, whereby for normal operation said diaphragm, said connecting means and said shoulder move as a unit to control said valve and, upon excessive pressure due to failure of said valve to function, said diaphragm will separate from said shoulder to allow escape of fluid from said chamber through said opening.

1,461,739. DRIVING MECHANISM FOR CLOCKS AND THE LIKE. KELLMANN SILBERMANN, La Chaux-de-Fonds, Switzerland. Filed Feb. 12, 1921. Serial No. 444,459. 8 Claims. (Cl. 185—27.)

8. Gravity operated driving mechanism for clocks or the like comprising an inclined track for supporting a plurality of weights, having its lower end arranged ad-

jacent transmission means consisting of an endless driving member carrying a plurality of carriers or supports located at equal distances from each other adapted to receive and discharge the weights, means for releasing the weights including a member pivoted intermediate its ends, having an upwardly projecting part at each end, one of which parts, when the member is in normal position holds the weights from movement on the track, but which, when said member is operated on the discharge of a weight from the transmission means is moved downwardly to position to release a weight, whilst at the same time the other part is moved upwardly to retain the succeeding weights, and spring means for returning the parts to normal position.

1,461,740. COUCH HAMMOCK. GEORGE F. SISBOWER, Bayside, and LOUIS E. PITTONI, New York, N. Y., assignors to Manhattan-Rome Company, branch of Rome Metallic Bedstead Co., Long Island City, N. Y., a Corporation of New York. Filed Mar. 21, 1919. Serial No. 284,131. 4 Claims. (Cl. 5—125.)

2. A hammock comprising a seat frame, end sheets having their lower portions connected with the seat frame, a back windshield having top and bottom rails, lugs on the upper portions of the end sheets detachably engaging the contiguous ends of the top rail with the windshield, and links each pivoted at one end to an end of the seat frame and having their free ends provided with lugs positioned to engage the contiguous ends of the bottom rail of the windshield, the complemental engaging portions of the top and bottom rails and the respective lugs being positioned to maintain the windshield in a taut condition when the parts are engaged.

1,461,741. PENDULOUS AUTOMATIC WEIGHING SCALE. WILLIAM TIMSON, Birmingham, England, assignor to W. & T. Avery, Limited, Birmingham, England. Filed Dec. 7, 1921. Serial No. 520,690. 1 Claim. (Cl. 265—61.)

An automatic weighing scale comprising in combination a scale pan, a lever upon which the scale pan is

mounted, a connecting rod, a weighbeam connected to said lever by said connecting rod, a rod mounted in said weighbeam, a pendulum weight adjustably mounted on said rod, a second pendulum weight mounted vertically below aforesaid pendulum weight, a screw threaded rod on which said second pendulum is adjustably mounted, a knife-edge mounting for the second pendulum weight, a weight indicator connected to the second pendulum weight mechanism, and knife-edged plates and stays connecting the pendulous weighbeam with the second pendulum weight, for the purpose herein set forth.

1,461,742. CONCRETE INSERT. CHARLES C. TOMKINSON, Plainfield, N. J., assignor to J. Edward Ogden, Mountainville, N. Y. Filed Jan. 27, 1921. Serial No. 440,354. 7 Claims. (Cl. 72—105.)

1. A sheet metal concrete insert comprising a pair of stampings secured together and forming a box adapted to house an anchor and having walls for supporting an anchor, a roof surmounting the box, webs extending from the ridge of the roof and flanges on the webs.

1,461,743. TRAP. LORENZ C. ACCOLA, Canton, Mo. Filed July 24, 1922. Serial No. 577,114. 4 Claims. (Cl. 43—88.)

4. A trap comprising two spring jaws pivotally secured to each other at their ends, integral arms carried by said jaws and adapted to abut each other to hold said jaws in opened position, a plate for holding said arms in opened position, said plate being adapted to release said arms when moved downwardly, whereby said jaws will move into engagement with each other, and integral portions carried by said arms and adapted to lock with each other when said jaws are in closed position.

1,461,744. AUTOMATIC STOCK FOUNTAIN. JOSEPH H. ARTMAN, Laurel, Nebr. Filed May 22, 1920. Serial No. 383,449. 1 Claim. (Cl. 119—77.)

As a new article of manufacture, a drinking fountain comprising a tank having a closed top, a drinking trough

located at the bottom of the tank, said tank provided with an outlet-opening into said trough, a vertical air tube having its upper end opening into said tank and its lower end opening into said trough, and a protecting hood secured to the side of said tank and overhanging the lower end of said tube below the top of the trough, said hood being open at its lower end only and adapted to be closed when liquid rises in the trough.

1,461,745. PROCESS OF PURIFYING ANTHRAQUINONE AND ITS DERIVATIVES. FREDERICK WILLIAM ATTACK, Charleston, W. Va. Filed July 19, 1922. Serial No. 576,126. 5 Claims. (Cl. 260—57.)

5. The process of purifying crude dry anthraquinone which comprises re-crystallizing the same from a phenol-water mixture approximating phenol-monohydrate in composition and remaining a homogeneous liquid at ordinary temperature.

1,461,746. REMOVABLE DRYING-CHAIN MECHANISM FOR ENVELOPE-MAKING MACHINES. ADDISON E. AUGUSTINE, Hackensack, N. J., assignor to Chester Machine Co. Inc., New York, N. Y., a Corporation of New York. Filed Feb. 24, 1920. Serial No. 360,966. 3 Claims. (Cl. 198—134.)

1. The combination with the main frame of an envelope making machine having a chain driving roller mounted thereon, of a detachable drying mechanism for the newly gummed envelopes, said drying mechanism comprising a supporting frame, an endless envelope conveying chain adapted to engage and to be driven by said drive roller, the supporting frame having guideways along which said chain travels and by which the chain is guided directly to and away from said drive roller, and said supporting frame extending longitudinally toward said drive roller but terminating short thereof and being detachable without affecting the drive roller.

1,461,747. WAVE MOTOR. CLARENCE E. BOONE, Long Beach, Calif. Filed Dec. 22, 1920. Serial No. 432,561. 5 Claims. (Cl. 253—8.)

1. A wave motor comprising a member actuated by the waves, a shaft rotatably mounted, a radially ex-

tending sleeve fixed to said shaft, a rod slidably mounted in said sleeve so as to be reciprocated therein, and connected to said member for imparting oscillating motion to said shaft from the oscillating movement of said member.

1,461,748. CORN HUSKER. OLIVER BOYER, Spencer-ville, Ohio. Filed Apr. 29, 1920. Serial No. 377,547. 9 Claims. (Cl. 130—5.)

1. In a corn husker, a plurality of snapping rolls, each roll having a plurality of longitudinal grooves, each groove comprising a relatively wide portion and a relatively narrow portion.

1,461,749. GLARE-PREVENTING DEVICE FOR LAMPS. FRANK BURBIDGE, Marston, near Northwich, England. Filed Nov. 2, 1921. Serial No. 512,347. 1 Claim. (Cl. 240—48.4.)

In an anti-glare device for vehicle lamps having a forwardly presented and circumferentially extending face situated behind the glass of the lamp, the combination of two vertical plates spaced apart and extending rearwardly from the plane of said face so as to project edgewise into the lamp, a series of horizontally disposed and closely spaced parallel strips of thin material mounted upon said vertical plates, said plates being interlocked with said strips by means of slots in the plates interengaging with cooperating slots in the strips and retaining wires attached to the top and bottom of said vertical plates and extending down the rear edges of said strips so as to retain them in position upon said vertical plates, and two oppositely disposed flat arcuate attachment members of thin strip material connected to said vertical plates at the opposite ends thereof so as to extend only partially around and be secured to the said forwardly presented face of the lamp, substantially as described.

1,461,750. CONDUCTOR SUPPORT. HOMER P. CHANDLER, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Sept. 5, 1922. Serial No. 586,186. 15 Claims. (Cl. 191—43.)

1. The combination with a support of a conductor clamp comprising a jaw member detachably secured to

the support and having means to engage the conductor, a second jaw member having means to engage the conductor opposite to that of the first jaw, means on the second jaw movable relative thereto, means on the first jaw to be engaged by the means on the second jaw where-

by the second jaw will be raised into a fulcrum engagement with the support and the conductor engaging means moved into clamping engagement with the conductor when the relative movable means on the second jaw is moved relative thereto.

- 1,461,751. CONDUCTOR SUPPORT. HOMER P. CHANDLER, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Nov. 27, 1922. Serial No. 603,449. 10 Claims. (Cl. 191-43.)

1. A trolley wire clamp comprising a support provided with means for attachment to a hanger, a pair of jaws having a pivotal engagement with the support, each jaw having projections and rotatable means on the support to engage the projections at a point below the pivotal engagement of the jaws and support to move the jaws into engagement with a trolley wire.

- 1,461,752. CONDUCTOR SUPPORT. HOMER P. CHANDLER, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Nov. 29, 1922. Serial No. 603,947. 25 Claims. (Cl. 191-43.)

25. A conductor clamp comprising in combination means to grip a conductor, means to secure the gripping means to a support and means to open the gripping means to receive the conductor.

- 1,461,753. CONDUCTOR HOLDER. HOMER P. CHANDLER, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Jan. 27, 1923. Serial No. 615,266. 23 Claims. (Cl. 191-43.)

1. A conductor holder comprising a supporting member having means to secure the member to a hanger, a

pair of jaws rotatively mounted on the member and movable towards each other to grip a conductor, means on the jaws to engage means on the supporting member

to limit the amount of relative rotation, and means on the supporting member to engage the jaws and move them into engagement with the conductor.

- 1,461,754. TRANSMITTING AND RECEIVING APPARATUS FOR WIRELESS TELEGRAPHY. GEORGE H. CLARK, Brooklyn, N. Y., assignor to Radio Corporation of America, a Corporation of Delaware. Filed Mar. 3, 1921. Serial No. 449,394. 7 Claims. (Cl. 250-8.)

1. The method of causing the sudden termination of radio signaling oscillations which consists in inducing oscillations of opposite phase in the receiving circuit to oppose the continuation of oscillations due to the stored energy in the receiving circuit.

- 1,461,755. AUTOMATIC DRILL PRESS. CHARLES E. COX, Freeport, Ill. Filed July 19, 1920. Serial No. 397,252. 9 Claims. (Cl. 77-25.)

1. In a drill press, a frame, a driving spindle carried thereby, a magazine comprising an endless belt of tool-

holding sleeves hinged together, means for moving the belt to bring any of the sleeves into registration with the driving spindle, and means for raising and lowering said magazine through the movement of the endless belt.

- 1,461,756. MORTISE LOCK. JOHANNES CRONING, Hamburg, Germany. Filed July 26, 1920. Serial No. 399,188. 3 Claims. (Cl. 70-16.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A mortise lock consisting of a cylindrical lock casing having pockets and threaded ends, screw flanges engaging said threaded ends for compensating for different door thickness, said flanges closing said pockets, a cylindrical bolt tube of smaller diameter than said casing and screwed thereto at right angles, and means to secure one of the flanges in adjusted position.

- 1,461,757. ACCOUNTING SHEET. FREDERICK W. GROBY, River Edge, N. J. Filed Nov. 26, 1918. Serial No. 264,169. 7 Claims. (Cl. 283-66.)

1. A safe guard ledger sheet comprising a sheet, suitable ruling and captions dividing the sheet into a plurality of sections, means dividing each section into a plurality of columns, said ruling also providing a further column at one side of said sections, said ruling also including a plurality of horizontal lines dividing all of said columns vertically into a plurality of separated spaces, a plurality of detachable "pick-up" strips associated one with each of certain of said sections, said sheet having a binder portion at one side thereof by which the sheet may be bound within a suitable binder, and said ruling defining a "pick-up" column within said binder portion, together with a detachable strip beyond said binder portion, all for use substantially in the manner set forth.

- 1,461,758. CABLE-MEASURING DEVICE. WILLIAM F. HOSFORD, Oak Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 1, 1919. Serial No. 274,560. 5 Claims. (Cl. 33-134.)

1. In a device for measuring cable, an endless movable member, rotatable elements supporting and driven by said endless movable member, means carried by said endless movable member for frictionally engaging the cable, a spring supported guide over which the cable

travels, means for moving said guide into and out of contact with the cable, adjustable means cooperating with the endless movable member for varying the pres-

sure between the cable and the frictional engaging means on the movable member, and registering means driven by one of said rotatable elements.

- 1,461,759. SIDE CAR FOR MOTOR CYCLES. JOHN O. JOHNSTON, Newark, N. J. Filed Jan. 14, 1922. Serial No. 529,109. 8 Claims. (Cl. 208-45.)

1. A frame for motorcycle side cars comprising side bars, a front bar, a rear bar, one side bar having a front extension thereon, a tie-bar extending from said extension obliquely to the rear, and a connection between the end of the tie-bar and the rear bar for supporting a wheel.

- 1,461,760. APPARATUS FOR MOISTUREPROOFING PACKAGES. LOUIS MORINSKY, New York, N. Y., assignor, by mesne assignments, to The Cracker Jack Co., a Corporation of Illinois. Filed Sept. 25, 1919. Serial No. 326,366. 28 Claims. (Cl. 91-46.)

1. In an apparatus for moisture-proofing elongated, rectangular, filled packages, the combination with a tank

for moisture-proofing material, of devices for passing the packages through the material comprising an endless, flexible carrier having laterally projecting grippers arranged to engage the opposite ends of the packages, means for opening and closing said grippers to receive and discharge the packages, and means for guiding said carrier and said grippers arranged to effect the draining of the elongated, rectangular packages with the lengthwise edges thereof slightly inclined to the horizontal and with one such edge lower than the others.

12. An apparatus for moisture proofing packages, comprising a tank, a carrier having outwardly projecting pairs of package engaging grippers thereon, means for intermittently advancing said carrier to move the packages through the material in said tank, means at one portion of the path of movement of said grippers for shifting the same relatively to said carrier to thereby open the grippers for discharging and receiving packages, and means for feeding packages to the opened grippers.

25. In an apparatus for moisture proofing filled packages, a tank, a carrier having package holders for moving the packages through the material in said tank, each of said holders comprising a pair of plates between which the packages grip, said plates being free to oscillate to a limited extent in different directions, whereby they will bear squarely upon opposite faces of the package.

1,461,761. COLLAPSIBLE-TUBE-COATING MECHANISM FOR TUBE-PRINTING MACHINES. ARCHIBALD W. PAULL and ALONZO L. EDWARDS, Wheeling, W. Va., assignors to Wheeling Stamping Company, Wheeling, W. Va., a Corporation of West Virginia. Filed Aug. 4, 1922. Serial No. 579,633. 6 Claims. (Cl. 91-16.)

1. In mechanism for coating collapsible metal tubes, the combination with the printing roll and the rotating carrier-disk of a tube-printing machine, said disk having tube-carrying spindles on a face thereof, of a coating roll located adjacent to the path of travel of said spindles and adapted to be engaged by the peripheries of the tubes as the latter are advanced following contact with said printing roll, a reservoir for the coating material, and means intermediate said reservoir and said coating roll whereby material from the former is transferred to the latter.

1,461,762. MOP. FREDERICK W. PENDERGAST, Cambridge, Mass. Filed May 29, 1922. Serial No. 564,309. 1 Claim. (Cl. 15-229.)

A mop composed of a bunch of filaments laid side by side, an endless metal reinforcing loop member composed of substantially parallel side portions and neck

portions connecting the side portions, the filaments being threaded through the loop member, confined between the neck portions thereof, and bent across one of the side portions, so that the free ends of the filaments depend in two series from said side portion, and means connecting the depending portions at one side of the loop mem-

ber with those at the opposite side, said loop member, the connecting means and the filament portions associated therewith, constituting a reenforced shank, adapted to be clamped between mop head jaws, and stiffened by the loop member, so that the ends of the shank may project operatively in opposite directions from the clamping jaws.

1,461,763. SAW JOINTER. FRANK A. RAPPELBYE, Silver Creek, N. Y., assignor to Allen & Co. Inc., New Haven, Conn., a Corporation. Filed Mar. 2, 1922. Serial No. 540,466. 1 Claim. (Cl. 76-47.)

A saw jointer formed from a single strip of spring sheet metal, the central portion of which is longitudinally-slotted and bowed, the ends of the strip formed with triangular openings and with slots entering the ends of the strip and intersecting the said openings.

1,461,764. ENSILAGE CUTTER. EMMOR W. SILVER, Salem, Ohio, assignor to The Silver Manufacturing Company, Salem, Ohio, a Corporation. Filed Nov. 16, 1921. Serial No. 515,486. 3 Claims. (Cl. 146-112.)

1. An ensilage cutter or the like including a wheel, a cutting blade on the side face of the wheel at an interval therefrom and an outwardly flanged deflecting plate secured to the wheel and directly between the blade and the wheel in rear of the cutting edge of the blade.

- 1,461,765. DENTAL TRAY. HENRY E. WEBER, Canton, Ohio. Filed May 11, 1921, Serial No. 468,610. 1 Claim. (Cl. 248—20.)

A bracket for dental trays and the like, having a plurality of upwardly curved radial resilient ribs partially countersunk in the bracket for bearing and clamping around the rim portion of the tray.

- 1,461,766. TIRE. ANDREW J. WIEGAND, Baltimore, Md. Filed Dec. 15, 1916. Serial No. 137,174. 10 Claims. (Cl. 152—1.)

1. A cushion tire having an annular channel extending from its inner edge, a closure ring for said edge, said channel having walls inclining to the inner surface of said ring, and a pair of annular ribs projecting toward said ring, the outer walls of said ribs being adapted to seat against said first walls.

- 1,461,767. EXPANSIBLE COUPLING MEMBER. EWALD W. WEYBAUGH, Rochester, N. Y. Filed Jan. 12, 1922. Serial No. 528,733. 6 Claims. (Cl. 16—39.)

1. An expansible coupling member comprising a socket cover plate, a post rigid with and extending centrally from said cover plate, gripping devices surrounding said post adapted to cooperate with the walls of the socket and spreading means for said gripping device operated by the turning of the cover plate and the post.

- 1,461,768. HAND-OPERATED TOILET FAN. EDWARD W. WISCH and WALTER J. WISCH, Baltimore, Md., assignors to themselves, Sidney C. Vincent, and Frederick C. Volkman, both of Baltimore, Md. Filed May 11, 1921. Serial No. 468,466. 5 Claims. (Cl. 230—33.)

1. In a fan of the character described, the combination with a fan shaft, and means for driving said shaft, a series of fan blades carried by the shaft, one of the

blades having positive connection with the shaft, and a plurality of means carried by the positively connected blade adapted to cooperate with the remaining blades

whereby each of the remaining blades is forced by said means to open or unfolded position and carried with the fixed blade upon the rotation of the fan shaft.

- 1,461,769. CAR COUPLING. JOHN H. EGGERS, Jr., Huntingburg, Ind. Filed June 29, 1921. Serial No. 481,369. 1 Claim. (Cl. 218—110.)

A car coupling comprising a drawhead, a knuckle pivotally mounted at the end of the drawhead at one side of the same, yieldable means holding the knuckle normally in uncoupled position, a locking head pivotally mounted upon the drawhead at the rear of the knuckle and normally supported by the drawhead in the path of an opposed knuckle, a rock shaft mounted on the under side of the drawhead, connections between said rock shaft and the locking head, and connections between the said rock shaft and the knuckle whereby inward movement of the knuckle will raise the locking head to permit the coupling operation.

- 1,461,770. SEED-SOWING MACHINE. THOMAS CHARLES ELLIS, ALFRED JEFFERY, and HARRY MADDOCKS, Peterborough, England. Filed July 6, 1922. Serial No. 573,157. 3 Claims. (Cl. 221—135.)

1. A seed sowing device including a casing comprising side plates, a hollow frusto-conical drum having peripheral slots arranged between said plates, and a series of pallets slidably adjustable through said slots to form adjustable pockets for the reception of the seed to be sown.

1,461,771. CLUTCH-PEDAL ATTACHMENT. EDGAR S. ENGLE, Greensburg, Pa. Filed Oct. 21, 1920. Serial No. 418,358. 10 Claims. (Cl. 74—81.)

1. In a locking device for clutch pedals of the class described, an oscillatory foot actuated member associated with the clutch pedal, a clutch member upstanding in advance of the clutch pedal and pivotally movable in consonance therewith, and a clutch member associated with the said foot actuated member and coacting with the first mentioned clutch member.

1,461,772. SEAT BACK. WELLINGTON G. FULLER, Aberdeen, S. Dak., assignor of one-half to Stuart C. Searle, Aberdeen, S. Dak. Filed Apr. 3, 1922. Serial No. 549,047. 2 Claims. (Cl. 155—133.)

1. A readily detachable seat back comprising a substantially U-shaped seat engaging member, the parallel legs of which, when in operative position, are adapted to engage the upper surface of a seat member, said legs being provided with angularly disposed portions adapted to intimately engage the front edge of the seat member, said angularly disposed portions being connected by a horizontally disposed member adapted to intimately engage the under surface of the seat member; a back member pivotally secured to the free ends of said legs, a portion of said back member projecting below the pivot point and adapted to intimately engage the rear edge of said seat member, and to thereby prevent the backward tilting of said back member; and independent means comprising a cleat provided with a relatively broad flat bottom surface carried by said back member adjacent its lower end in cooperative relation to said seat member adapted to normally prevent forward tilting of said back member.

1,461,773. STOVEPIPE LOCK. THEODORE N. GOFFE, Springfield, Mo. Filed Nov. 27, 1922. Serial No. 603,636. 2 Claims. (Cl. 126—318.)

2. A stove-pipe lock comprising in combination with a stove-pipe, a metal strip secured intermediate its ends

to the pipe end and projecting at one end therefrom, said strip being flexible to permit bending of its inner end outwardly of the pipe, and its projecting end into a

hook, and a keeper for the hook, said keeper comprising a cross-rod having a loop intermediate its ends to receive the hook.

1,461,774. ACCELERATOR. CLINT HAMMOND and WILLIAM INMAN, Boyne City, Mich., assignors of one-third to said Inman and two-thirds to Hylon J. Heaton and Sabin Hooper, Boyne City, Mich. Filed July 5, 1921. Serial No. 482,481. 11 Claims. (Cl. 74—107.)

1. An accelerator formed from a length of metal formed with a bend defining a pair of arms, one of said arms being formed with an offset defining pedal and foot-engaging portions, and attaching means associated with the other arm.

1,461,775. ATTACHMENT FOR WHEELED SCOOPS OR SCRAPERS. CENTENNIAL W. JERRY, Cumberland, Wis. Filed Oct. 17, 1921. Serial No. 508,417. 15 Claims. (Cl. 55—17.)

1. The combination, of a wheeled scoop, a finger-bar pivoted to the front end of the scoop and provided with a lever arm, a link pivotally connected to said lever arm, an angle lever pivoted to the side of the scoop, a link pivoted to one arm of the angle lever and the end of the first mentioned link, whereby the finger-bar may be caused to turn on its pivot by means of the angle lever.

2. The combination, of a wheeled scoop having means for raising the scoop and a latch for holding it in raised position, means for gathering stones, means for preventing the scoop and stone gathering means from entering the ground, and a series of catches adapted to be engaged by the latch for controlling the operation of the device in loose ground.

6. In an attachment for wheeled scoops, a bar member, an end finger provided with a gudgeon and having a lever arm, and means for detachably securing the finger to the bar at its end.

10. In an end finger for stone-gathering attachments for wheeled scoops, the combination, of a body portion adapted to be secured to a finger-bar, a finger member, a gudgeon, and a lever arm.

14. In a wheeled scoop the combination of, a finger-bar pivoted to the scoop and adapted to lie flat upon and be supported by the bottom of the scoop, and fingers on said bar.

1,461,776. REVERSING MECHANISM FOR LATHES.
HENRY J. KIAM, St. Paul, Minn. Filed Oct. 16, 1920.
Serial No. 417,293. 3 Claims. (Cl. 192—21.)

3. A reversing mechanism for lathes comprising a spindle rotatably mounted, a pair of pulleys journaled on the spindle and having opposed dished faces, a clutch member journaled on the hub of each pulley and adapted to be slid thereon to nest in the dished portion of its pulley, a spool-like housing secured on the spindle between the clutch members, a plurality of clamping levers pivoted on the end flanges of the housing for camming against the clutch members to move them to operative position, means for loosely connecting the clutch members to the housing, and a shift ring slidable on the housing for selectively engaging the respective clamping levers to render them operative.

1,461,777. CENTRIFUGAL SEPARATING MACHINE.
FRITZ KOCH, St. Paul, Minn. Filed July 27, 1921.
Serial No. 487,899. 2 Claims. (Cl. 83—54.)

1. A separating apparatus comprising centrifugal separating mechanism, said mechanism including a hollow

rotor mounted to rotate about a vertical axis and having peripheral discharge openings, a feed conduit coincident with said axis and opening in approximately air tight relation into the interior of said rotor, means for rotating the rotor to create a suction in said conduit, and a flexible conduit section, forming part of said feed conduit, the sides of said flexible section being capable of contraction responsive to the suction action of said rotor.

1,461,778. TOY PISTOL. OLIVER C. MADISON, Omaha, Nebr.; Minnie B. Madison executrix of said Oliver C. Madison, deceased. Filed Nov. 25, 1921. Serial No. 517,805. 1 Claim. (Cl. 124—12.)

In a toy pistol, a resilient strand bent between its ends to provide a coiled spring and a rectilinear projector arm having a circular loop at one terminal of the strand to form a holder for a ball, and forming a rectilinear supporting arm, and bent adjacent to and intermediate said supporting arm and its second terminal to approximately an angular form to provide a handle having an inwardly curved part adjacent to the supporting arm for use as a finger-hold and having an outwardly curved part adjacent to its second terminal to provide a hand-guard, said strand at its second terminal being provided with a lug adapted to engage within said loop, that part of the projector arm adjacent to the loop being bent outwardly to dispose the loop in a plane outwardly of the plane of the projector arm for limiting the arc of movement of the loop when the lug is released from said loop.

1,461,779. HOLDING DEVICE. SAMUEL S. MATTHES, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed May 27, 1922. Serial No. 564,169. 19 Claims. (Cl. 191—39.)

1. A holding device comprising a body member and a clamping member, holding means disposed on opposite sides of the clamping member to maintain the clamping member in position, means on the clamping member engaging means on the holding means to permit the clamping member to pivot about the point of engagement as a fulcrum and means on the holding means for adjusting the pivotal point of engagement of the clamping member towards or away from the body member.

- 1,461,780. SUPPORT FOR ELECTRIC CONDUCTORS. SAMUEL S. MATTHES, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Nov. 23, 1922. Serial No. 602,907. 16 Claims. (Cl. 191—36.)

1. The combination of an elongated insulating member, means to secure a conductor to each end of the member permitting the conductor to pass along one edge in longitudinal relation thereto, means to secure a conductor to an opposite edge in transverse relation thereto and an elongated slot extending through said member and substantially along its longitudinal neutral axis between said conductors.

- 1,461,781. CURRENT COLLECTOR AND SLEET REMOVER. SAMUEL S. MATTHES, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Mar. 26, 1923. Serial No. 627,603. 16 Claims. (Cl. 191—59.1.)

5. An article of manufacture comprising a support and a member mounted thereon to rotate relative thereto and to engage a conductor and to rotate relative thereto, the rotation of the member relative to the conductor comprising alternate periods of rotation and rest as the support moves longitudinally to the conductor in the same direction.

- 1,461,782. APPARATUS FOR TESTING BOLT THREADS. FRANZ MEYER, Jena, Germany, assignor to the Firm of Carl Zeiss, Jena, Germany. Filed Aug. 8, 1921. Serial No. 490,736. 1 Claim. (Cl. 88—14.)

In an apparatus for testing bolt threads a microscope, containing in the focal plane of its ocular a linear mark rotatable about the axis of the microscope, means for supporting the screw bolt with relation to the microscope, other means for displacing the screw bolt and the said microscope relatively to each other in a plane perpendicular to the axis of the said microscope, two knife-edges and means for supporting the said knife-edges with relation to the said bolt, these means being adapted to hold the knife-edges independently of each other in the plane containing the bolt axis and perpendicular to the microscope axis against two thread flanks of the bolt.

- 1,461,783. SECRET-COMMUNICATION SYSTEM. RALZEMOND D. PARKER and BAXTER P. HAMILTON, Brooklyn, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 27, 1919. Serial No. 347,776. 9 Claims. (Cl. 179—1.)

1. A telephone transmission system including a sending station and a receiving station, means at said sending station for intermittently superimposing on the telephone current a distorting current, a normally inoperative shunt across the telephone circuit at said receiving station tuned to be resonant to the frequency of said distorting current, and means for rendering said shunt operative whenever said distorting current is superimposed on said telephone current.

- 1,461,784. NAIL-TRANSFERRING MECHANISM. JOSEPH H. POPE, Hamilton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 2, 1919. Serial No. 327,967. 14 Claims. (Cl. 1—36.)

1. In a machine of the class described, controllable actuating mechanism for the machine, nail-receiving means, mechanism for transferring nails to the receiving means, means controlled with the actuating mechanism for controlling the transferring mechanism, and means acting upon said controlling means for independently governing the transferring mechanism.

1,461,785. WORK SUPPORT. JOSEPH H. POPE, Hamilton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 24, 1919. Serial No. 340,116. 17 Claims. (Cl. 12—127.)

1. In a machine of the class described, the combination of a shoe support, a guide in which said shoes support is normally freely movable substantially horizontally in a right line, and means acting upon the guiding surface to lock the support against movement at a predetermined period in the operation of the machine.

1,461,786. JACK. JOSEPH H. POPE, Hamilton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 4, 1920. Serial No. 414,501. 17 Claims. (Cl. 1—19.)

1. The combination with operating mechanism and a carrier for a shoe-portion of a support co-operating therewith, a jack mounted for movement on the support toward and from the operating mechanism and carrier, and movement limiting means for the jack, said means co-operating with the support and being variable in position, and a movable member co-operating with the movement-limiting means to vary its position.

1,461,787. KINETIC-ENERGY-TRANSFORMING MEANS FOR CARS. FRANK E. STEBBINS, Washington, D. C. Filed Mar. 16, 1920. Serial No. 366,380. 73 Claims. (Cl. 213—22.)

1. A friction draft or buffing apparatus comprising a hollow metallic casing or housing and a follower or

plunger forming an inclosed space or chamber, one of said parts being slidable relative to the other under impact, and a mobile mass of bodies having frictional contact with one another within the chamber, said mass being adapted to transmit part of the kinetic energy of

the impact to the inner area of the casing defining the chamber; said apparatus being so constructed and the parts combined that the inclosed space or chamber is variable in shape under variations of pressure to permit corresponding change of shape of the mobile mass under such variations of pressure.

1,461,788. KINETIC-ENERGY-TRANSFORMING MEANS FOR CARS, BUMPERS, ETC. FRANK E. STEBBINS, Washington, D. C. Filed Mar. 20, 1920. Serial No. 367,482. 31 Claims. (Cl. 213—31.)

1. A friction draft or buffing apparatus comprising a housing structure, a plurality of friction bodies some being of greater length than thickness assembled to form a mobile mass located within said structure, and means whereby said friction bodies are allowed a relative movement under load or impact.

1,461,789. BLANK-SORTING MACHINE. WILLIAM C. STEWART, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 27, 1921. Serial No. 525,053. 34 Claims. (Cl. 83—92.)

sustain the blank and movable into a position in which it ceases to sustain the blank to permit the blank to be discharged from it, and means controlled by the extent a dimension of the blank for moving the support into the last-named position, said means including a presser, and means for causing it to be pressed against the blank.

1,461,790. MAXIMUM-VOLTAGE INDICATOR. MORTON SULTZER, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed May 31, 1919. Serial No. 301,002. 5 Claims. (Cl. 177—351.)

5. A voltage indicating device for a transmission line including a plurality of individual relay units, means for connecting said relay units in parallel with the transmission line, each of said connecting means including a resistance element of different value whereby each of said relay units will be responsive to potentials of different magnitudes impressed on said line, and signaling means common to all of said units and controlled by either one of said units.

1,461,791. DRILL. FRANK W. ZIMMERMAN, Amarillo, Tex. Filed Sept. 7, 1921. Serial No. 499,121. 1 Claim. (Cl. 255—73.)

In a drill, a body portion formed with grooves in the opposed side faces thereof, a reamer formed integral with the body and disposed adjacent to one end thereof, the reamer being formed eccentrically with respect to the body portion, the cutting edge of the reamer being spirally formed and merging with the walls of one of the grooves of the body.

1,461,792. TRACK DEVICE FOR AUTOMATIC TRAIN CONTROL. WILLIAM M. BECK, Elwood, Ind. Filed Mar. 12, 1923. Serial No. 624,321. 9 Claims. (Cl. 246—351.)

1. In a device for the purposes specified, a head to contact with a train-member, a rock-shaft having one or

more arms, means comprising a pivot for each arm connecting same with the head, manually operated means for

rocking the shaft to move the head into the path of the train-member and adjustable means for varying the projection of the head into the path of the train-device.

1,461,793. SHOE. HENRY B. BOHR, Cincinnati, Ohio, assignor to The Julian & Kokenge Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 11, 1921. Serial No. 444,242. 2 Claims. (Cl. 36—71.)

1. In a shoe, an insole shaped to provide a support for the structure of the foot intermediate the normal tread portions thereof, an outsole, and a filler between the outsole and the insole having a non-resilient metallic portion, and a resilient portion lying between the outsole and the insole.

2. In a shoe, an insole shaped to provide a support for the structure of the foot intermediate the normal tread portions thereof, an outsole, and a filler between the outsole and the insole having a non-resilient metallic portion, and a resilient portion, both lying between the insole and the outsole, and the resilient portion lying at least in part between the metallic portion and the insole to serve as a cushioning pad for the said metallic portion.

1,461,794. FLUID-TREATING APPARATUS FOR FILMS. CHARLES DE MOOS, Fort Lee, N. J., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Feb. 3, 1922. Serial No. 533,984. 9 Claims. (Cl. 95—94.)

1. Apparatus for fluid treating motion picture film having sets of perforations therein, comprising treatment vessels and means for conducting said film through said vessels, said means including a series of perforation-engaging tractive members, certain of said members engaging only one set of perforations and others engaging only another set of perforations.

1,461,795. BRIDGE-REENFORCING MEANS. ROBERT Z. DRAKE, Omaha, Nebr. Filed Jan. 19, 1923. Serial No. 613,567. 7 Claims. (Cl. 14—4.)

1. The combination with the truss span of a bridge, said truss span being provided with cross-beams and having

its ends disposed on ground supports, of girders mounted to permit movements independently of the truss span and provided with a floor, said girders being normally disposed

above and adjacent to the cross-beams and engaging said ground supports and adapted to be deflected downwardly into engagement with said cross-beams.

1,461,796. SHEET-TRIMMING MACHINE. CARL A. FRAHM, Canton, Ohio, assignor, by mesne assignments, to United Alloy Steel Corporation, Canton, Ohio, a Corporation of New York. Filed July 1, 1921. Serial No. 481,783. 30 Claims. (Cl. 164—49.)

1. A sheet trimming machine including a reciprocating head with shearing edges on opposite sides, shearing dies co-operating with the shearing edges and two independently operated trip mechanisms for controlling the operation of said head.

1,461,797. SPARK PLUG. WILLIAM A. HEIDE, Detroit, Mich. Filed July 3, 1920. Serial No. 393,800. 2 Claims. (Cl. 123—169.)

1. In a spark plug the combination with a shell and an insulating core, of an electrode, and means for adjusting the electrode longitudinally relative to the core, said means including a threaded member through which the electrode extends, means upon the electrode and within said member for holding the electrode against movement in one direction relative to the member, means upon the electrode for engaging the outer portion of said member

for indicating the size of a spark gap to be produced, said member being shiftable against the gap indicating means to support the electrode at the proper point to produce the desired gap, means for locking said member in shifted position relative to the insulating core, and means for securing the electrode to the member and against relative movement after it has been adjusted to a spark gap of the desired size.

1,461,798. COMBINATION OVERALLS. ANDREW G. HILDRETH, Worcester, Mass. Filed Feb. 25, 1921. Serial No. 447,775. 1 Claim. (Cl. 2—144.)

As an article of manufacture, combination overalls comprising an upper coat section, a lower pants section, a belt portion formed of two thicknesses of material permanently enclosing and connecting the adjacent edges of said upper and lower garment sections, and closing means for said garment, said upper coat section having a portion of its material adjacent its lower edge formed as a surplus fold originally and temporarily secured to the upper edge of said belt portion by separate and additional stitching and readily releasable from folded condition to increase the effective length of the garment without disturbing the permanent connection of said belt portion to said upper and lower garment sections.

1,461,799. CLOSURE CONSTRUCTION FOR AUTO LAMPS. EUGENE A. KUEN, Cincinnati, Ohio, assignor to The Thos. J. Corcoran Lamp Co., Cincinnati, Ohio, a Corporation of Ohio. Filed Oct. 8, 1921. Serial No. 506,420. 4 Claims. (Cl. 240—41.)

1. A closure construction for auto lamps, comprising a closure rim having an annular rearwardly extending wall,

a metal strip located within the wall in annular formation, and means adapted to secure the ends of the strip to the wall and to permit discharge of moisture there-through.

1,461,800. HOISTING AND LUFFING MECHANISM FOR CRANES. ROBERT STANLEY LEWIS, Ipswich, England, assignor of one-half to Ransomes & Rapier Limited, Ipswich, England, a Company. Filed Oct. 2, 1922. Serial No. 591,915. 5 Claims. (Cl. 192—18.)

1. In hoisting and luffing mechanism for cranes the combination of a driving member, driven members coaxial therewith on either side thereof, a luffing mechanism geared to one of the driven members, a hoisting mechanism geared to the other driven member, a clutch member on each driven member, corresponding clutch members on the driving member, a brake member on each driven member, a stationary brake surface for each brake, means tending normally to apply said brakes and means for imparting axial movement to the driving clutch members so as to couple the driving and driven members and simultaneously release the corresponding brake.

1,461,801. APPARATUS FOR CHARGING REVERBERATORY FURNACES. ALEXANDER GRANT MCGREGOR, Warren, Ariz. Filed Jan. 9, 1922. Serial No. 527,987. 10 Claims. (Cl. 214—18.)

1. The combination with a reverberatory furnace the side walls of which are provided with charging holes located down near the slag line of the molten material, of a travelling charging machine comprising a hopper for the material to be entered into the furnace, a motor mounted on said machine to travel therewith, a charging member communicating at its top with the chamber of said hopper, one or more plungers working in said

charging member, said connecting operating mechanism comprising a shaft operated by said motor, a second shaft geared to the motor shaft and provided with a worm, a crank shaft having a worm-wheel meshing with said worm, and one or more cranks connected with said plunger or plungers.

1,461,802. BAG HOLDER. DAVID O. McROBERTS, Stewardson, Ill. Filed July 6, 1921. Serial No. 482,788. 1 Claim. (Cl. 83—26.)

A bag holder comprising a spreader ring to be secured in the mouth of the bag, and a hanger consisting of two parallel arms engaged at their lower ends with the spreader ring at diametrically opposite points thereof and having their upper ends forming inverted hooks to engage over a supporting line, a cross bar connecting the terminals of said hooks, and an eye in said cross bar between the hooks, said eye lying entirely below the bights of the hook.

1,461,803. BAND BRAKE. GEORGE W. MACBRIDE and GEORGE C. BONNEY, Boston, Mass., assignors to MacBride Co., Southport, Me., a Corporation of Maine. Filed Apr. 28, 1922. Serial No. 557,105. 10 Claims. (Cl. 187—249.)

5. In combination, a brake band, a lining member for said band, and means at one end of said member engageable with said band when said member is at an angle to said band and while in such engagement permitting said member to be swung into lengthwise lapping engagement with said band, the opposite end of said member and the end of said band being formed to interfit.

1,461,804. COMBINED TOOTHBRUSH AND WATER-GLASS HOLDER. ROBERT DAVID MAYO, Cleveland, Ohio. Filed Apr. 20, 1921. Serial No. 462,834. 5 Claims. (Cl. 248—63.)

1. In a combined toothbrush and water glass holder in combination, a back plate having ribs forming a compartment adapted to receive a tooth brush, a cover for said compartment, and means comprising a shelf provided with retainer apertures for detachably securing the said back plate to a supporting member.

4. In a combined tooth brush and water glass holder in combination a back plate, a spring band having crimped

side edges terminating short of the end thereof, apertures in the plate having enlarged portions conforming to the

said crimped edges and adapted to receive the said spring band, and a detachable shelf connected to the back plate below the said band.

1,461,805. GASOLINE-RESERVE-SUPPLY APPARATUS. JOHN HAYWARD PARSONS, Ferndale, Mich. Filed Oct. 24, 1921. Serial No. 510,137. 9 Claims. (Cl. 158—46.5.)

1. In a device of the character described, a tank adapted to contain fuel, a feed pipe mounted therein with its lower extremity adjacent the bottom of the tank and its upper extremity projecting above the tank, the upper portion of the feed pipe having a port therein exterior of the tank, the upper portion of the feed pipe having a second port therein opening into a pipe line through which fuel is adapted to be conveyed to the engine, means for admitting air from within the tank to said first-mentioned port to break the flow of fuel through the pipe line when the fuel level falls to a predetermined plane, and means for rendering said last named means inoperative at will to resume feeding of fuel through the pipe line.

1,461,806. DRIVE CONNECTION FOR TRAVEL-INDICATING INSTRUMENTS. WILLIAM H. SCHULZE, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed July 19, 1922. Serial No. 576,112. 4 Claims. (Cl. 74—7.)

1. In a motor vehicle which has a road wheel mounted on and having its axis fixed with respect to a fixed axle, and provided with a laterally mounted concentric gear and a pinion whose journal bearing is carried by the fixed axle meshing with said gear; in combination with such fixed axle and pinion a bracket mounted on the fixed axle; a second bracket mounted on the first, adjustable thereon about, and along an axis parallel to,

the road wheel axis; a housing member and co-operating means thereon and on the last mentioned bracket for removably mounting the housing member on the bracket; power-transmitting mechanism carried by said housing, comprising as one final element emerging from the

housing, a shaft provided exteriorly of the housing with means for making drive connection with the first mentioned pinion, and as the other final element projecting from the housing, a shaft adapted for coupling to a flexible shaft.

1,461,807. PROCESS OF TREATING ORES. ALBERT SILVER, Tonopah, Nev., assignor to The Merrill Company, a Corporation of California. Filed Oct. 18, 1921. Serial No. 508,588. 10 Claims. (Cl. 75—18.)

1. The process of treating ores containing matter which prematurely removes dissolved metals from solution, which consists in insulating said matter by bringing the ore in contact with a substance which destroys the power of the matter to prematurely remove the dissolved metals from solution, then, without separating said matter from the ore, subjecting the ore to a metal solvent and then separating the solution from the gangue.

1,461,808. BEVERAGE. WALTER O. SNELLING, Allentown, Pa. Filed Jan. 31, 1920. Serial No. 355,335. 6 Claims. (Cl. 99—11.)

1. The process of treating fruit juices which comprises diluting such juices, adding a sugar, and fermenting the resulting product by means of a lactic acid ferment.

1,461,809. VACUUM CLEANER. ALONZO ABNER WARNER, New Britain, Conn., assignor to Landers, Frary & Clark, New Britain, Conn., a Corporation of Connecticut. Filed Oct. 20, 1920. Serial No. 418,249. 3 Claims. (Cl. 15—9.)

1. In a vacuum cleaner comprising a casing and a removable nozzle, a tubular member projecting from the casing and provided with a recess extending radially through its wall and with radial studs, a tubular portion extending from said nozzle and entering said tubular portion upon the casing, said nozzle portion having a shoulder-forming projection extending radially therefrom and integral therewith and fitting within said recess, and a locking ring surrounding said casing por-

tion and having elongated slots in its periphery surrounding said studs and an interrupted flange overlapping the end of said casing tubular portion and, when said ring is in locking position, engaging the shoulder upon said radial projection so as to hold it within said recess said flange having a space permitting said projection to be inserted into and removed from said recess when said space is in alignment with said recess.

1,461,810. WRENCH. CHARLES J. WITZEL, Brooklyn, N. Y. Filed Sept. 27, 1921. Serial No. 503,513. 23 Claims. (Cl. 81—171.)

1. As an article of manufacture, a wrench comprising a pair of gripping jaws, means for operating the same, and including means shiftable relatively to said gripping jaws for rendering said operating means inoperative, and means for shifting said shiftable means.

1,461,811. CONDUCTOR SUPPORT. ARTHUR C. WOOD, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Dec. 6, 1922. Serial No. 605,266. 14 Claims. (Cl. 191—43.)

2. A conductor clamp comprising in combination a pair of jaws to grip a conductor, a supporting member to secure the clamp to a hanger, a rotatable member mounted on and supported by the supporting member, a connecting member provided with means to support the jaws in pivotal relation, and means on the connecting member coacting with means on the rotatable member to move the connecting member relative to the jaws and force the jaws into engagement with the conductors when the rotatable member is rotated.

1,461,812. CONDUCTOR SUPPORT. ARTHUR C. WOOD, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Dec. 30, 1922. Serial No. 609,967. 9 Claims. (Cl. 191—43.)

1. A conductor support comprising in combination a support member, an element slidably and non-rotatably mounted on the support member, a pair of coacting jaws pivotally secured to the said element and having engagement with the support member and operating

means mounted on the support member in rotatable and longitudinally movable relation thereto and engaging the element when rotated in one direction to move the element and in turn move the jaws into engagement with the conductor.

1,461,813. SAFETY SUPPORT FOR CURRENT COLLECTORS. ARTHUR C. WOOD, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Jan. 27, 1923. Serial No. 615,249. 10 Claims. (Cl. 191—64.)

1. A support comprising a pair of inter-fitting tongued and grooved members pivotally held together and normally in alignment, the inner faces of the grooved member having oppositely disposed longitudinal channels and a cross channel, means on the tongued member to be positioned in the channel and about which the members pivot, other means on the tongued member to interlock with the channel to maintain the members in alignment and means interlocking with the members to hold the members against relative movement but to permit movement when the stress upon the members in a longitudinal direction exceeds a predetermined amount.

1,461,814. CRUMB SWEEPER. WILLIAM AISENSTEIN, Chicago, Ill., assignor to Wilmort Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 1, 1920. Serial No. 414,088. 2 Claims. (Cl. 15—41.)

1. In combination, a crumb sweeper for picking up crumbs and the like from tablecloths and delicate fabrics, comprising a casing having side and end walls, a transverse brush opening in the bottom of the sweeper, flanges projecting upwardly from the edges of said brush opening forming crumb compartments to either side of said brush opening, a brush rotatably mounted in said opening, two traction wheels, one at each end of said brush, a shaft for said brush, the ends of said shaft being rigidly secured directly to said traction wheels, pivot members projecting through the end walls of said casing and affording bearing support for said traction wheels directly inside of said end walls, said traction wheels constituting the sole points of support in the normal operation of the sweeper whereby the sweeper may be inclined forwardly or backwardly to depress either edge of said brush opening down into contact with the tablecloth, and correspondingly raise the other edge of said brush opening above the table-

cloth, the flanges at the edges of said brush opening being rigidly held against vertical movement during operation of the sweeper; and a short handle rigidly secured to said casing and projecting diagonally upwardly therefrom.

1,461,815. HAND ROLLER. RALPH B. BIRD, Oakland, Calif. Filed Jan. 18, 1922. Serial No. 530,064. 4 Claims. (Cl. 216—61.)

1. An article of manufacture, comprising, in combination, a framing and a roller, said framing composed of two pairs of arms cast integral and radiating from a common center and a shaft, one pair of said arms forming a handle, and the other pair forming a wide-mouthed gap for the reception of said roller, and the said shaft adapted to carry the roller and be supported in the extremities of the arms forming the said gap, the surface of the roller being provided with tapered ends adapted to eliminate the edge-lines of the roller when in operation.

1,461,816. WIRE-COVERING MACHINE. WILLIAM E. COOK, St. George, N. Y., assignor, by mesne assignments, to The Peerless Insulated Wire and Cable Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 1, 1919. Serial No. 286,735. 9 Claims. (Cl. 117—40.)

1. A wire covering machine embodying therein a rotatable support, movable about a vertical axis, wire feeding means whereby a wire is continuously fed axially of said support, a container or containers for a coil of sliver, or other material, mounted upon and rotatable with said support, the axis or axes thereon extending horizontally, means for compacting the sliver, or other material, upon the wire, means whereby binding cords or strands are applied to the compacted sliver, and actuating means for said support and said wire feeding means.

1,461,817. WIRE-COVERING MACHINE. WILLIAM E. COOK, St. George, N. Y., assignor to Peerless Insulated Wire and Cable Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 29, 1921. Serial No. 518,576. 11 Claims. (Cl. 117—34.)

1. A wire covering machine embodying therein a cross frame intermediate the top and bottom of the machine having vertical bearings therein, a hollow spindle

mounted in said bearings, a compacting head surmounting said spindle and including a die, the opening of which is in axial alignment with said spindle, a main power shaft also mounted in bearings in said cross frame, geared connection between said power shaft and said spindle,

means adapted to impart continuous traverse to a wire passing through said hollow spindle, and a container carrier suspended from and rotatable with said spindle, consisting of a plurality of horizontally extending saddles adapted to receive a barrel container and engage the outer end thereof.

1,461,818. WINDOW CONSTRUCTION. ROBERT S. DRUMMOND, New York, N. Y. Filed June 20, 1919. Serial No. 305,550. 6 Claims. (Cl. 189—69.)

1. The combination with a ventilator having an axis of rotation, of a stationary muntin member having a weathering flange on one side of said axis and another weathering flange on the opposite side of said axis and projecting from the same part of said stationary muntin member as the first mentioned flange but disposed at an angle to said first mentioned flange.

1,461,819. FURNACE AND METHOD OF CONTROLLING THE DRAFT THEREIN. WILLIAM M. DUNCAN, Alton, Ill. Filed Dec. 16, 1920. Serial No. 431,168. 7 Claims. (Cl. 110—40.)

1. A furnace having a combustion chamber, a mechanical stoker comprising a traveling chain grate forming the bottom wall of said combustion chamber, said combustion chamber being provided with an outlet for products of combustion, a bridge wall located at the rear of said traveling chain grate and extending across the lower portion of the combustion chamber, said bridge wall having an outlet for the draft rising at the rear of said grate, and a draft producer including means whereby the eductive draft at the last mentioned draft outlet is caused to exceed the eductive draft in said combustion chamber.

1,461,820. WHEELING ATTACHMENT FOR LIFTING JACKS. KARL ECK, Bellevue Borough, Pa., assignor to The Duff Manufacturing Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 11, 1920. Serial No. 402,875. 10 Claims. (Cl. 280—53.)

1. The combination of a lifting jack having an interlock element on its frame, a two-wheeled carriage having an interlock element above, an abutment portion below and a lower handle socket, and a handle adapted to be fastened with the interlock elements and to have its end inserted in said socket.

1,461,821. FROG BANK. NICHOLAS S. EBERHARDT and ARTHUR E. HACKETT, Milwaukee, Wis. Filed May 2, 1922. Serial No. 557,894. 2 Claims. (Cl. 46—36.)

1. The combination of a container having a slot therein, and having an opening in an upper wall, a support normally closing said opening and lying in the same plane with the upper wall, an animal resting on said support, means on said animal for retaining a coin, an arm secured to said animal and pivoted to said upper wall, a spring secured to said support and means for depressing and releasing said spring to lift said animal and deposit a coin in said slot.

1,461,822. CLAMP FOR PRODUCING MOTTLED SKEIN DYEING. HERMAN EPSTEIN, New York, N. Y. Filed July 25, 1922. Serial No. 577,283. 6 Claims. (Cl. 8—7.)

1. Skein dyeing devices comprising one or more sectional clamps having base and cover elements, each being

recessed on adjacent surfaces to present chambers, means at the ends of said elements suited for inter-engagement, means for forcing said elements towards each other, and means carried by said elements to prevent moistening the portion of the skein held between said cover and base elements when subjected to immersion.

1,461,823. FOUNTAIN PEN. VICTOR GARTNER, Brooklyn, N. Y. Filed Oct. 4, 1921. Serial No. 505,317. 6 Claims. (Cl. 120—49.)

3. In a retractable fountain pen, in combination, a casing, a barrel therein, a tube slidably fitting in said barrel and having a lug extending through a helical slot in said barrel and into a longitudinal groove in said casing, said tube having an enlarged socket at its forward end, an ink feed section fitting in said socket, and a shoulder between said socket and the main length of said tube to limit the retracting movement by contact with the end of the barrel, with the lug spaced from the end of the helical slot.

1,461,824. CLEANING-PROCESS GUN. FRANK M. HILGERINK, Chicago, Ill., assignor to H. Stillson Hart and Charles F. Pitts, trustees, Chicago, Ill. Filed Nov. 10, 1919. Serial No. 336,836. 3 Claims. (Cl. 299—111.)

1. A cleaning process gun, comprising a nozzle, a plurality of pipes connected to said nozzle, a bracket comprising longitudinally extending side members, transversely disposed webs connected to said pipes and members and a handle secured to said members and extending transversely of said pipes above the same, and a grip adjustably mounted upon one of said pipes between said bracket and said nozzle whereby said gun may be swung about said handle as a fulcrum.

1,461,825. ELECTRIC SWITCH FOR AUTOMOBILE GASOLINE TANKS. WILLIAM S. LA LONDE, Evanston, Ill. Filed Oct. 27, 1919. Serial No. 333,643. 3 Claims. (Cl. 200—84.)

2. In mechanism of the class described, a supporting mechanism containing a pair of electric contacts spaced

apart one from the other, a switch closing means for bridging the space between said contacts, means supporting the switch closing means movable toward the

contacts and means sustaining the first mentioned supporting means to move in the general direction of and in unison with the switch closing means, for the purposes set forth.

1,461,826. BELT BUCKLE. EDWIN S. MIX, Rochester, N. Y., assignor to Hickok Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 30, 1922. Serial No. 548,168. 1 Claim. (Cl. 24—191.)

A belt buckle comprising a front plate having a rear face thereof serving as a clamping surface, a clamping member pivotally mounted in rear of the front plate and provided with a belt anchoring member for one end of the belt and formed with a groove extending longitudinally of the pivot of the clamping member, and a strap of leather mounted in the groove projecting beyond the latter and having the opposite walls of the groove deflected inwardly into binding engagement with opposite sides, the projecting portion being adapted to be deflected laterally by the belt as the clamping member is moved to clamping position and tend to straighten by the tension on the belt in order to accommodate itself to the thickness of the belt.

1,461,827. ENVELOPE MACHINE. EUGENE F. NISSEN, Alameda, Calif. Filed Mar. 3, 1920. Serial No. 363,020. 10 Claims. (Cl. 1—3.)

1. A device of the character described comprising an anvil, a plunger associated therewith, a cup member on said plunger, a magazine adapted to contain fasteners, an ejector adapted to be reciprocated to remove the lowermost fastener in the magazine and interpose it between the plunger and the anvil, and thereafter to be oscillated to place the fastener within the cup on the plunger.

1,461,828. PROCESS AND APPARATUS FOR MAKING ICE. LOUIS C. NORDMEYER, St. Louis, Mo. Filed Jan. 6, 1922. Serial No. 527,291. 6 Claims. (Cl. 62—172.)

1. The process of making ice from undistilled water held in a freezing can, which consists in subjecting the can to the action of a refrigerating medium, injecting a stream of water under pressure through a confined air space and into the mass of water within the can so as to entrain air with the stream of water passing into the can, and maintaining a substantially constant level of the water within the can.

1,461,829. TONE ARM. FRANK OBERST, Glendale, N. Y., assignor to Sonora Phonograph Corporation, a Corporation of New York. Filed June 12, 1919. Serial No. 303,614. 4 Claims. (Cl. 274—23.)

1. A tone-arm, comprising a stationary tubular post member terminating in an enlarged end having an annular spherical recess therein, a tubular movable member having an enlarged spherical cup-shaped end adapted to enter the spherical recess in the end of the post member, and a gimbal joint comprising independent members fixed in the bores of and connecting said tone-arm members at the enlarged ends thereof and concealed by the overlapping ends of said tone-arm members and permitting a horizontal and vertical swinging movement of said movable tone-arm member.

1,461,830. ELECTRICAL INDICATING DEVICE. RODOLPH STUART O'NEIL, London, England. Filed Mar. 1, 1920. Serial No. 362,417. 1 Claim. (Cl. 177—351.)

An indicator for indicating the position of a ship's helm, comprising a casing having a display opening, illuminating devices behind said opening and each of a different color, a plurality of pivoted and transparent

discs spaced around said opening and having indicia, a corresponding number of electro-magnet devices operatively connected to said discs, and switching means operatively connected to the ship's rudder and cooperating with the illuminating and electromagnet devices whereby the movement of said helm to one side of the neutral position causes one of said illuminating devices to be

energized and movement of the helm to the other side causes another of said illuminating devices of different color to be energized, said movement also causing one or other of the magnetic devices to be energized so as to interpose the corresponding disc between the illuminating device and the display opening, said disc indicating the approximate number of degrees of movement of the helm on either side of the neutral position.

1,461,831. PROCESS OF MANUFACTURING COMPOUNDS SOLUBLE IN WATER OF DIETHYLBARBITURIC ACID AND ITS HOMOLOGUES. FRITZ QUADE, Berlin, Germany. Filed Nov. 9, 1921. Serial No. 514,077. 6 Claims. (Cl. 260—33.)

5. Process of manufacturing water soluble compounds of disubstituted barbituric acid, which process consists in digesting a solution of the diethylbarbituric acid, with the theoretical quantity of a freshly precipitated magnesium carbonate and concentrating the filtered solution by evaporation under a vacuum to dryness.

1,461,832. COVER OR GAITER FOR LAMINATED VEHICLE SPRINGS. HENRY RAMSDEN, Bradford, England. Filed Feb. 14, 1922. Serial No. 536,547. 7 Claims. (Cl. 267—37.)

1. A gaiter for laminated springs comprising a flexible body having a pair of absorbent pads secured to the inside thereof and arranged to form a longitudinal central channel coextensive of said body, the opposed inner edges of said pads being serrated so as to uniformly distribute the lubricant in the channel to the sides of the body.

1,461,833. ARMING OF AEROPLANES. JEAN JELES MARIE ANTOINE EUGENE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint-Stock Company of France. Filed Aug. 14, 1922. Serial No. 581,835. 6 Claims. (Cl. 89—40.)

1. Means for arming aircraft comprising a turret, a rolling carriage mounted on said turret, a frame horizontally trunnioned on said carriage, a cradle vertically trunnioned on said frame, and a gun carried by said cradle.

1,461,834. DEVICE FOR INSERTING LACES UNDER SHOE UPPERS. ALBERT J. SMILEY, Philadelphia, Pa. Filed Oct. 16, 1922. Serial No. 594,834. 2 Claims. (Cl. 132—1.)

1. As an article of manufacture, a shoe lace inserting implement comprising a shank having a loop at one end, the transverse end portion of the loop having a seat or depression constructed and adapted to snugly embrace the shoe lace when the end of the latter is disposed at right angles to the loop whereby upon moving the implement in a plane parallel to the surface of the upper the lace will be forced in between the upper and the foot, said shank and loop being constructed of a single length of wire, a handle, and means pivotally connecting the shank to the handle so that the shank may be swung into a plane parallel with the handle to lie in a folded position beside the handle and whereby said shank may be swung from said folded position to extend in a substantially aligned relation with the handle and project outwardly from the end of the latter.

1,461,835. SELF-CONTAINED BLOW-OFF VALVE. CHESTER H. STROUD, Hubbell, Mich., assignor of one-half to Neil M. Gillies, Lake Linden, Mich.; Martin Yauch administrator of said Chester H. Stroud, deceased. Filed Mar. 29, 1919. Serial No. 286,012. 3 Claims. (Cl. 137—139.)

1. A blow-off valve having a casing provided with an internal valve seat, a piston controlled valve movable entirely within said casing to and from said seat and

having an enlarged rounded head, said casing including a forward portion around the valve having a reduced

extension and from the wall of which the valve is spaced a distance less than the space between the valve and the seat when the valve is fully opened.

1,461,836. CONE-BAKING MACHINE. DAVID L. STULL, Birmingham, Ala. Filed July 7, 1919. Serial No. 309,183. 13 Claims. (Cl. 107—66.)

1. In a baking machine for cores and the like, a frame, a mold comprising a series of mold cavities and divided into sections lengthwise of said cavities, means to raise and lower said mold, cores for the mold cavities, end guides on the frame and co-acting elements on the mold sections disposed and adapted to separate and close the mold sections as they are raised and lowered, and a taper face extending along the frame on each side of the mold and adapted to be engaged by the side mold sections as they are lowered to co-operate with the end guides in forcing said sections to closed position.

7. In a cone baking machine, a frame carrying female cone molds, a movable carrier, cores carried thereby, and rigidly mounted trimming knife edges for the cores adapted to key the batter webs between cones to the movable carrier, said carrier being movable from a position overhanging the female molds, as and for the purposes described.

13. In a cone baking machine, a frame, a sectional baking iron parted longitudinally and having formed between its center element and its side elements a plurality of cone molds, a vertical guide in the frame for the center element, upwardly and outwardly curving guides projecting above the frame at each end and having outwardly curving guides for said side elements, lever mechanism

to reciprocate the mold elements vertically, wedge means effective for the length of said side elements to press them against the center element when lowered, co-acting mold cores, and means to heat the molds.

1,461,837. ARTICLE HOLDER. OSCAR T. SUNDIN, Providence, R. I., assignor to David H. Zell, Incorporated, a Corporation of New York. Filed July 25, 1922. Serial No. 577,317. 2 Claims. (Cl. 206—31.)

1. In a device of the character described, the combination with a flexible casing, of a flat metallic base strip disposed transversely upon an intermediate portion of the casing, folded lugs on the ends of the strip embracing the lateral edges of the casing, an upright back upon the strip, an overhanging flange on the back, and a depending lip on the flange.

1,461,838. FOUNTAIN PEN. LUIGI TADDEO, Cleveland, Ohio. Filed July 20, 1921. Serial No. 486,083. 1 Claim. (Cl. 120—47.)

A fountain pen comprising a hollow body forming an ink reservoir; a reciprocable plunger therein formed of compressible material; a metal reinforcement for said material having a central body member formed with a tapped hole and a plurality of arms forming prongs driven into said material; and a plunger rod formed with a threaded portion adapted to co-operate with said tapped hole.

1,461,839. GRAIN-CAR DOOR. HENRY M. TENNESON, Galesburg, N. Dak. Filed July 8, 1920. Serial No. 394,643. 1 Claim. (Cl. 20—32.)

In combination with a car having a door way, a plurality of strips forming a grain door, lap joints at the marginal edges of the strips, means flexibly connecting the strips, screw bolts passing through certain strips, brace cleats having slots at one end carried by the screw bolts and adapted at times to extend transversely across the joints of said strips, wing nuts threaded on the bolts for clamping the cleats in adjusted positions, and hooks pivoted to the opposite ends of said bolts adapted to engage eyelets carried by the door way to effect a tight closure when the door is in operative position.

1,461,840. APPARATUS FOR HUMIDIFYING AIR. LOUIS EUGENE VIGNON, Tarare, France, assignor to Les successeurs D'Albert Godde, Bedin & Co., Lyon France. Filed Mar. 28, 1922. Serial No. 547,395. 3 Claims. (Cl. 219—39.)

1. Apparatus for supplying humidified air comprising in combination a closed vessel, electrically operated heaters in said vessel adapted to vaporize water therein, means for supplying water to and maintaining a constant level thereof in said vessel, a mixing chamber having an open air inlet duct, means for dispersing in said chamber

the steam produced in said vessel, a conduit connected to said mixing chamber, a fan adapted to suck the humidified air from said mixing chamber and force same into the premises to be humidified and means for rotating said fan.

1,461,841. SCREW PROPELLER. RUDOLF WAGNER, Hamburg, Germany, assignor to Star Contrapropeller Ltd. A./S., Christiania, Norway. Filed June 15, 1921. Serial No. 477,738. 6 Claims. (Cl. 115—34.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. An improved propelling means for ships comprising, in combination, a screw propeller, and a rudder post, forward portions of the vertical body of said post being blade shaped whereby to act as guiding apparatus.

1,461,842. MAP-DISPLAY DEVICE. ADOLF J. WESTMAN, Montreal, Quebec, Canada. Filed Aug. 3, 1922. Serial No. 579,345. 1 Claim. (Cl. 40—86.)

A display device for maps and the like comprising a casing having an open top, a bed plate in the casing adjacent the top thereof and having its ends bent inwardly and flaring towards the ends of the casing providing pockets in the opposite ends of the casing, springs mounted in one side of the casing and extending oppositely into the adjacent ends of said pockets, bearing studs carried upon the free ends of the spring, spools seated in the pockets having axial openings in opposite ends, each spool having one end engaging a bearing stud, said spools adapted to carry the ends of a map strip for passage over said bed plate, operating shafts arranged in the other side of the casing for engagement in the openings in the other ends of the spools and provided with transverse webs, said spools having kerfs in said other ends adapted to receive said webs for interlocking the spools and operating shafts together, and a removable cover for the open top of the casing having a transparent panel adapted to overlie said bed plate and expose the section of map passing thereover.

1,461,843. TOP. ALEX L. ZANDER, St. Paul, Minn. Filed Mar. 25, 1922. Serial No. 546,760. 5 Claims. (Cl. 46—32.)

1. The combination in a top, of a balancing body, a stem secured to said body and formed with a spiral, a sleeve on said stem in operative engagement with said spiral, a thimble on said sleeve, and means for locking the thimble to the sleeve on a downward thrust.

1,461,844. COAL-TIPPLE ATTACHMENT. EDWARD H. HERSE, Altoona, Pa. Filed Jan. 4, 1922. Serial No. 526,881. 3 Claims. (Cl. 221—144.)

3. A delivery gate for coal tipples including in combination with the tipple frame-work and delivery chute, a dished disk having its concave side exposed to the pressure of coal within the tipple and also provided with an opening for aligning with the chute, and means for rotating the disk.

1,461,845. CONTROL VALVE FOR AIR BRAKES. WILHELM HILDEBRAND, Lichtenberg, Berlin, Germany, assignor to Knorr-Bremse Aktiengesellschaft, Lichtenberg, Berlin, Germany. Filed July 21, 1920. Serial No. 398,037. 3 Claims. (Cl. 303—39.)

1. In a control valve for air brakes, a casing containing a piston chamber, a piston movable therein, and a slide valve adapted to be actuated by said piston, in

combination with an expansion chamber to receive air from the front of the piston, said casing being provided with a passage forming an open communication between said piston chamber and the main brake pipe, and also with a separate passage having an inlet located permanently in front of said piston and an outlet controlled by said slide valve and adapted to place said expansion chamber in direct communication through said slide valve with said piston chamber.

1,461,846. BRAKE ACCELERATOR. WILHELM HILDEBRAND, Lichtenberg, Berlin, Germany, assignor to Knorr-Bremse Aktiengesellschaft, Lichtenberg, Berlin, Germany. Filed July 21, 1920. Serial No. 398,039. 2 Claims. (Cl. 303—83.)

1. In a brake accelerator, a transfer chamber to receive air from the train pipe when an application of the brake is initiated, a brake cylinder, a de-aerating pipe normally in connection with said transfer chamber and with said brake cylinder, means for cutting off said connection with said de-aerating pipe, and a valve for controlling the connection of the train pipe with said transfer chamber, said valve being in turn controlled by fluid under pressure flowing directly from said brake cylinder.

1,461,847. GOVERNING VALVE FOR INTERNAL-COMBUSTION MOTORS. HARRY R. JACKSON, Chicago, Ill., assignor of one-half to Henry A. May, Chicago, Ill. Filed Feb. 9, 1922. Serial No. 535,282. 7 Claims. (Cl. 137—132.)

1. In a device of the class described, the combination of an induction duct, a main throttle valve in the duct, a gate valve in the duct between the throttle valve and the engine, said gate valve facing upstream and being adapted to swing down stream, and a piston one side of which is in communication with the inside of the duct and the other side is in communication with the atmosphere, said piston being adapted to urge the valve towards closed position when the atmospheric pressure exceeds the pressure within the duct.

1,461,848. TUBE-FORMING MACHINE. WILLIAM JAQUIERY, Waterbury, Conn. Filed Mar. 31, 1922. Serial No. 548,303. 17 Claims. (Cl. 113—33.)

1. In a tube-forming machine, the combination with a die for bending a strip of metal into approximately the shape of a U having diverging sides, a pair of rolls

for squaring-up said sides into parallelism, a cooperating roll and die for bending one edge of the U-shaped strip inwardly, and the other edge outwardly, a pair of cooperating rolls for forcing said bent edges into locking

position, a die for locking said edges together, a pair of cooperating rolls for squeezing said edges together to form a smooth outer cylindrical surface, a mandrel for supporting the inner surface of said tube, and a final sizing die for reducing the diameter of said tube.

1,461,849. METHOD OF MAKING PHONOGRAPHIC RECORDS. EARLE W. JONES, New York, N. Y., and EDWARD R. HARRIS, Arlington, N. J. Filed June 3, 1916. Serial No. 101,548. 24 Claims. (Cl. 274-46.)

1. The method of making dies for the production of sound record tablets consisting in photo-engraving a metal plate to form a laterally undulatory rib thereon in correspondence with sound vibrations and then rounding off the corners of the rib.

1,461,850. BAG-CLEANING MACHINE. HENRY J. F. T. KACKER, Birmingham, Ala. Filed Jan. 6, 1921. Serial No. 435,529. 7 Claims. (Cl. 15-90.)

1. A rotatable cleaning drum mounted to rotate about its longitudinal axis and having its interior wall formed by longitudinal slats mounted at intervals on inwardly projecting gradually sloping substantially symmetrical spaced shelves which provide longitudinal pockets, each having a wide arcuate bottom wall and divergent gradually sloping walls, the sloping walls of each shelf being disposed at an obtuse angle and meeting in a rounded top edge, and a rotatable frame work for supporting said slats.

1,461,851. CONCRETE BUILDING BLOCK. FRANK KAGERMEIER, New Ulm, Minn. Filed May 8, 1922. Serial No. 559,155. 5 Claims. (Cl. 72-38.)

1. A wall structure comprising two adjacent series of superposed courses each course formed of blocks having plane outer surfaces, the adjacent blocks of said courses having interlocking dove-tailed grooves and projections respectively on their adjacent surfaces and having longitudinally extending channels therein between their top and bottom surfaces whereby a central air space is formed between the two horizontally adjacent courses.

1,461,852. DRIVING ARRANGEMENT FOR SHIPS. ALEXANDER T. KASLEY, Essington, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 29, 1921. Serial No. 456,675. 5 Claims. (Cl. 172-36.)

1. In a ship propulsion arrangement, the combination of two motors arranged side by side, each motor having oppositely rotating field and armature elements, pairs of meshing gears carried by the rotating elements of the motors at the ends of the latter, a propeller shaft, and gears carried by the propeller shaft and meshing respectively with one of the gears of each of the pairs.

1,461,853. SHEET-METAL-ROLLING MACHINE FOR FENDERS AND THE LIKE. HOMER R. KENNEDY, Los Angeles, Calif., assignor to Joseph J. Mathe, Los Angeles, Calif. Filed Sept. 3, 1921. Serial No. 498,354. 19 Claims. (Cl. 153-39.)

1. A sheet metal working machine, including a structure, a lever arm fulcrumed to said structure, an oscillating arm joined with said lever arm, a roller member carried by the free end of said oscillating arm, a template

adapted to receive work, the said roller member and said template co-acting in the forming of said work; said lever arm being provided with means allowing free movement at an end of said lever arm upon moving said

oscillating arm; said means including a compensating lift arm joined to the free end of said lever arm and means joined to said compensating lift arm for supporting said compensating lift arm.

1,461,854. VALVE FOR POWER REVERSE GEARS. WILLIAM F. KIESEL, Jr., Altoona, Pa. Filed Aug. 18, 1920. Serial No. 404,374. 10 Claims. (Cl. 277—3.)

1. A device of the character described for controlling the operation of a motor adapted to actuate an engine reverse gear including in combination, a body, two valves therein, said body having inlet and discharge passages controlled by one valve, and inlet, discharge and exhaust passages controlled by the other valve and means to actuate said valves including a rotatable member having a cam for each valve.

1,461,855. CURTAIN-ROD SUPPORT. LUDWIG J. KROESSER, Stoneham, Mass. Filed Nov. 28, 1921. Serial No. 518,131. 1 Claim. (Cl. 156—22.)

In a curtain rod support, the combination of a rod supporting member, and a holder therefor having a resilient loop-forming socket to positively clamp around and fric-

tionally engage a portion of the rod supporting member, the ends of the socket being extended to form arms which have normally an angular relation to one another of slightly greater than 90 degrees, whereby when the holder is secured to the squared corner of a window frame the top will be closed slightly thereby applying a positive clamping pressure to the said portion of the rod supporting member to tightly and frictionally engage but removably hold the rod supporting member in position.

1,461,856. STOVE COVER. FLORENCE L. ROBERTSON, Fergus Falls, Minn. Filed Sept. 20, 1921. Serial No. 501,944. 1 Claim. (Cl. 126—211.)

The combination with a stove top provided with a continuous outwardly flared depending flange and further provided with a transverse slot in proximity to one side of said flange, of a cover having a vertically disposed continuous flange conforming in contour to the shape of said top and adapted to have its lower edge seat on the upper edge of said flared flange when the cover is closed, means for hinging the rear portion of the flange of the cover to the rear portion of the flange of the top, and a supporting element permanently extending through said slot and having its upper end pivoted to the inner face of one side of the flange of the cover, said element provided with means near one end for detachably engaging with one end wall of the slot for maintaining said element extended to support the cover at right angles with respect to the rear of the top.

1,461,857. LOCK. ISAK A. TREIMAN and ROBERT L. ROCKWELL, Seattle, Wash.; said Rockwell assignor of one-fourth to said Treiman. Filed Dec. 19, 1921. Serial No. 523,485. 7 Claims. (Cl. 70—8.)

2. The combination with a door having a locking mechanism and a key applied thereto and extending from the

door, of a locking device removably attached to the door and comprising a slotted member for receiving the extended portion of the key therein and rotatable to actuate the key within the lock, and means for locking said member in position to prevent removal of the key from the door.

1,461,858. ADJUSTABLE BEARING FOR SPRING MOTORS. ELMER E. WILKINSON and SAUL ARONSON, Brooklyn, N. Y., assignors, by mesne assignments, to The Silent Motor Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Sept. 4, 1920. Serial No. 408,151. 5 Claims. (Cl. 64—53.)

4. As a new article of manufacture, an adjustable bearing comprising a body portion, a chuck extending from said body portion, and a bored bearing ball mounted in said chuck so as to be universally adjustable therein and adapted to receive one end of a shaft, said ball being sufficiently resilient to permit ready insertion and removal of the ball into and from the chuck.

1,461,859. PORTABLE CASING FOR TALKING MACHINES. REGINALD F. R. AMOR, Leytonstone, London, England. Filed Nov. 3, 1921. Serial No. 512,567. 6 Claims. (Cl. 274—2.)

1. A gramophone-cabinet comprising a casing, a motor-box hinged at its lower rear edge to the lower front edge of said casing, a sound diffuser or reflector hinged to said casing, and a hinged tone-arm, the parts being so arranged that, in their open position the bottom of the motor-box is flush with the bottom of said casing, and in their closed position the motor-box lies completely within the casing, and the tone-arm lies between the motor-box and the sound diffuser or reflector.

1,461,860. MOLDING APPARATUS FOR COMPRESSED BLOCKS. FRANÇOIS BONNET, Villefranche-sur-Saone, France. Filed Feb. 9, 1920. Serial No. 357,129. 4 Claims. (Cl. 25—41.)

1. A machine for molding concrete or the like blocks comprising a table, a mould thereon, movable vertically with respect thereto, a base fitting within said mould, a lid for said mould, means for imparting short reciprocating vertical movements to said base within said mould to

compress the substance being moulded, means for imparting continuous vertical movement to said base, members seated beneath the lateral walls of the mould and said

table and means for sliding said members from beneath said mould to allow said mould to sink toward said table and compress the substance being moulded.

1,461,861. WEFT-REPLENISHING LOOM. NAPOLEON CARON, Nashua, N. H., assignor to Nashua Manufacturing Company, Nashua, N. H., a Corporation of New Hampshire. Filed Aug. 3, 1921. Serial No. 489,450. 10 Claims. (Cl. 139—224.)

1. In an automatic weft replenishing loom, the combination of a magazine for spare bobbins, said magazine having a throat through which said bobbins are discharged into the running shuttle, and a bobbin supporting device mounted in said throat and normally movable freely upon engagement therewith of a bobbin to permit the bobbin to drop through the throat due to its own weight.

1,461,862. MANUFACTURE OF ELECTRIC-FURNACE LININGS. WALTER R. CLARK, Bridgeport, Conn., assignor to Bridgeport Brass Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Aug. 6, 1917. Serial No. 184,675. 38 Claims. (Cl. 204—64.)

30. The method of starting an induction furnace, which consists in placing within the heating space of said fur-

nace a composite body formed of materials of different melting points, then melting the material of lower melting

point, and then melting the material of higher melting point.

1,461,863. MANUFACTURE OF ELECTRIC-FURNACE LININGS. WALTER R. CLARK, Bridgeport, Conn., assignor to Bridgeport Brass Company, Bridgeport, Conn., a Corporation of Connecticut. Original application filed Aug. 6, 1917, Serial No. 184,675. Divided and this application filed Sept. 8, 1919. Serial No. 322,556. 26 Claims. (Cl. 204—64.)

1. The method of making the refractory structure of an electric furnace or the like having a passage or channel, which comprises tamping refractory material about a templet of the same shape as the passage to be formed and consisting of a metallic outer part temporarily reinforced with a filling so that such templet is sufficiently hard and strong to resist collapse under tamping pressure, and then eliminating the filling material.

1,461,864. SURGICAL SNARE. EMORY CLAPP DAY, Laguna Beach, Calif. Filed Dec. 24, 1919. Serial No. 347,156. 17 Claims. (Cl. 128—320.)

1. A surgical snare comprising a suitable body portion with a handhold, a snare wire guide on the body portion,

and a lever of the third order carried by the body portion and connected to the snare wire, said lever and handhold being coactively related to be gripped by one hand of the user, with the gripping force applied in a direction away from the snare wire.

1,461,865. SURGICAL SNARE AND UNIVERSAL HANDLE. EMORY C. DAY, Laguna Beach, Calif. Filed June 20, 1921. Serial No. 478,910. 8 Claims. (Cl. 128—320.)

1. A frame comprising a handhold, a stock, and a bottom member, with the stock and bottom member extending forwardly from the handhold at the upper and lower ends, an upstanding lever pivoted to the forward end of the bottom member and slotted lengthwise thereof, a manipulating lever pivoted at its upper end to the frame and entering the slot of the first-mentioned lever, said manipulating lever having a curved slot, and a pin passing through the first-mentioned lever and extending through the curved slot of the manipulating lever so as to join the two levers together, and a slide actuated by the movement of the upstanding lever.

1,461,866. AIR PROPELLER. CLAUDE DORNIER, Friedrichshafen, Germany, assignor, by mesne assignments, to Dornier-Metallbauten Gesellschaft mit beschränkter Haftung and Claudius Dornier, Friedrichshafen, A. B., Germany. Filed June 28, 1920. Serial No. 392,559. 2 Claims. (Cl. 170—159.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a hollow propeller in combination, two metal plates suitably united at their edges and extending each from the outer end of one blade to the outer end of the other, and a plurality of channels inserted between and fixed to said blades and extending longitudinally thereof from one end to the other.

1,461,867. ART OF STENCIL MAKING. STERLING ELLIOTT, Cambridge, Mass.; Harriet Adell Elliott executrix of said Sterling Elliott, deceased. Filed Mar. 1, 1920. Serial No. 362,570. 4 Claims. (Cl. 41—38.6.)

1. The method of preparing stencil sheets which consists in initially treating the sheet on one side only with a solution containing gelatine and water, and subsequently coating both sides of the sheet with a solution consisting of alum, glycerine and water.

1,461,868. CHAIR TIGHTENER. CHARLES FISCHER, Coldwater, Ohio. Filed Apr. 5, 1922. Serial No. 549,781. 5 Claims. (Cl. 155—197.)

1. In combination with the seat and the associated supporting members of a chair structure, a plate secured to the under surface of the seat, a member depending from said plate, a second plate having an opening through which the member is freely disposed, a nut threaded upon the member below the second plate, means carried by the first named plate and co-acting with the second plate to hold the second plate against turning movement, and members connecting the second plate and the supporting members of the chair structure.

1,461,869. NOVEL DEVICE FOR SECURING ENGINES ON MOTOR CYCLES. CLAUS FRANZENBURG, Nuremberg, Bavaria, Germany, assignor to the Firm Marswerke A.-G., Nuremberg-Doos, Germany. Filed June 17, 1921. Serial No. 478,340. 1 Claim. (Cl. 180—33.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

In a device for securing the engine in motor cycles, the combination, with the engine, of two links pivotally secured to opposite sides of the cycle frame and adapted to support the engine, placed in the longitudinal axis of said frame, in a pendulum like manner so as to cause said engine to take up its normal position as correctly as possible, set screws mounted in the cycle frame and adapted to act on the links, the adjustment of the said screws producing a movement of said links about their suspension points and therefore at the same time a movement of the engine in the horizontal direction, and a brace rod, rigidly secured to the cycle-frame and fixed to the engine in such a manner, as to allow said longitudinal adjustment of the latter.

1,461,870. CINEMATOGRAPHIC PROJECTION APPARATUS. LÉON FRASSIER, Paris, France. Filed Jan. 16, 1922. Serial No. 529,725. 2 Claims. (Cl. 88—17.)

1. In cinematographic projection apparatus, a source of light, a turn-table, a ring-shaped support for said turn-table, two projectors disposed upon said turn-table in staggered relation and symmetrically with regard to the center of the turn-table, said turn-table being rotatable to bring said projectors alternately with their axes of projection in alignment with the axis of projection of said source of light, a bracket depending from said turn-table and moving therewith, an electric motor supported by said bracket, an electric circuit to said motor for transmission of electric current thereto, operative connections between said motor and said projectors for selectively actuating the latter, and means for automatically closing said circuit when said turn-table has been moved to bring either one of said projectors with its axis of projection in alignment with the axis of projection of said source of light, and for breaking said circuit during the interval of rotation of said turn-table when neither one of said projectors is in position with respect to said source of light.

1,461,871. REVERSING CHUCK. FRANK M. FUNK and MARTIN C. JENNERS, Detroit, Mich. Filed Mar. 9, 1921. Serial No. 451,028. 5 Claims. (Cl. 10—138.)

1. In a chuck, the combination of a head and a body arranged to have relative rotative movement, a driving shank longitudinally movable with respect to said head and body which may be coupled up with one of the same in direct driving relation, a driving train supported

between the head and body including one or more planetary members with which the shank may be engaged, when disengaged from direct driving relation, for the purpose of reversing the driving effect.

- 1,461,872. FEELER MECHANISM FOR LOOMS. EDWARD T. GILMAN, Lowell, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Mar. 29, 1922. Serial No. 547,605. 3 Claims. (Cl. 139-286.)

1. In a feeler mechanism for looms, the combination of a feeler stand, a feeler slide mounted upon the feeler stand for movement towards and from the front of the loom in a direction inclined to the longitudinal axis of the shuttle, a feeler pivotally mounted on the inclined feeler slide to enter the shuttle in a direction inclined to the longitudinal axis of the shuttle on each detecting beat and having a normal swinging movement relative to the slide which increases in amplitude as the lay moves forwardly and imparts to the feeler an increased tendency to partake of its abnormal swinging movement, a stop for the feeler when in normal feeling position from which the feeler is removed as it swings normally on each detecting beat, and a transmitter which is actuated by the feeler only when the feeler is abnormally displaced.

- 1,461,873. BURNER OF THE INJECTOR TYPE. LUDWIG GROTE, Tottenham, London, England. Filed Aug. 15, 1922. Serial No. 581,926. 3 Claims. (Cl. 158-76.)

1. A liquid hydrocarbon burner of the injector type comprising a barrel whereof the major portion of the bore increases regularly in cross sectional area towards the nose end of said bore, said barrel having a circular enlargement of said bore at the rear end of said bore, an injector nozzle for injecting gas under pressure arranged co-axially with the bore in the rear wall of said enlargement, means to admit liquid hydrocarbons directly into said enlargement, and means to direct an auxiliary supply of gas under pressure in sharply converging streams on to the main stream of fuel mixture issuing from the nose of the burner, substantially as described.

- 1,461,874. ARTICHOKE TRIMMER AND CUTTER. JOSEPH GUERRIERI, San Francisco, Calif. Filed Sept. 12, 1922. Serial No. 587,675. 5 Claims. (Cl. 146-11.)

1. A device such as described comprising a frame; a cone-shaped casing mounted on said frame; a plurality of cutting elements journaled in said frame; a rotary shaft on said frame and driving means interposed adjacent said shaft and cutting elements.

- 1,461,875. ADJUSTABLE WRENCH. FRANK C. HACHENEX, John Day, Ore. Filed May 15, 1922. Serial No. 561,105. 6 Claims. (Cl. 81-154.)

2. A wrench comprising a stationary member and a slidable member, said stationary member having a tapered shank, said slidable member having a recess therein, said recess having two walls at right angles to each other, a tapered locking key in said recess, said locking key having two faces at right angles to each other and a face cooperating with the tapered shank, one of the faces of the key being in sliding contact with one of the walls of the recess, and a screw passing through the other wall of the recess and bearing on the other face of the key to hold said key in position in said recess.

- 1,461,876. STOP MOTION. CHRISTIAN H. T. HAGELSTEIN, Boston, Mass., assignor to The Reece Button Hole Machine Company, Boston, Mass., a Corporation of Maine. Filed Mar. 14, 1922. Serial No. 543,577. 2 Claims. (Cl. 192-149.)

1. In a stop motion, the combination with a driving shaft, of a driving belt therefor and a belt shipper to connect the driving belt to or disconnect it from the shaft, of a stop cam fast on the driving shaft, said stop cam having a continuous peripheral cam face, said face being formed with a low portion, one end of which

merges into a relatively-short straight portion of increasing radius and the other end of which merges into a convexly-curved portion which is considerably longer than the straight portion and which also has a progressively-increasing radius, said straight portion and convexly-curved portion meeting and forming a high point at the cam, a stop dog, a spring acting on the stop dog and adjustable as to its tension, said stop dog being connected to the belt shipper so that when the belt is disconnected from the driving shaft the stop dog is out of the path of movement of the stop cam but when the belt is carried into the path of movement of the stop cam and engages the continuous cam face thereof, the shape of the cam face and the tension of the spring having such relation to the momentum and speed of the shaft that when the stop dog is brought into engagement with the cam the high point thereof will be carried past the stop dog once thereby largely reducing the speed of the shaft and said shaft will be brought to rest when the straight portion of the cam face comes a second time into engagement with the stop dog.

1,461,877. CYLINDER-REBORING MACHINE. MAURICE H. HANSEN, Seattle, Wash. Filed Aug. 8, 1921. Serial No. 490,630. 2 Claims. (Cl. 77—2.)

1. A cylinder reboring machine comprising a base plate applicable at the ends of the cylinders of an engine and adapted to be adjustably anchored thereto, a standard at one end of the plate having bearings formed thereon, a boring shaft rotatably and longitudinally movable in said bearings, a boring tool fixed to the lower end of the shaft, a sleeve fixed in the upper of said bearings and slidably containing the upper end of the boring shaft, an adjusting rod rotatably fixed in said sleeve and extended in a threaded connection concentrically within the boring shaft, means for manually rotating the adjusting rod to effect longitudinal adjustment of the boring shaft, and means for holding the adjusting rod against rotation to effect automatic advancement of the boring shaft when in operation.

1,461,878. THERMOSTATIC CONTROL. JOHN E. HARVEY, Milton, Mass. Filed May 23, 1921. Serial No. 471,550. 6 Claims. (Cl. 219—25.)

1. In a device of the class described, the combination of a source of power, a heating element adapted to be connected thereto, a switch manually operated to connect

the heating element with the source of power, a thermostat directly controlling the switch to disconnect the

source of power from the heating element, and a thermostat associated with said heating element and controlling said first thermostat.

1,461,879. COMBINED ENVELOPE AND LETTER SHEET. HOLMES HARRIS, Washington, D. C. Filed Sept. 2, 1920. Serial No. 407,659. 3 Claims. (Cl. 229—92.1.)

2. A combined letter sheet and envelope consisting of a sheet divided by a vertical fold line and by transverse fold lines into at least eight panels, a sealing flap attached to the side edge of one of the upper panels, and address indicia on the face of said panel having the sealing flap, said sheet having the upper panels folded back against the back of the second panels on the upper transverse fold line, the other panels folded face to face on the vertical fold line, the third panels folded on the second transverse fold line against the back of one of the first panels folded back to back with the second panels and the remaining panels tucked between the faces of the second panels and said sealing flap folded over and sealed to the back of a third panel.

1,461,880. TRAILER CONNECTION. ERNEST F. HARTWICK, Greenfield Township, Wayne County, Mich., assignor to Detroit Trailer Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 23, 1921. Serial No. 502,720. 6 Claims. (Cl. 280—33.1.)

1. In combination, a fifth-wheel adapted to connect a trailer to a tractor and embodying a tractor pin on

one member and means on the other member to secure the tractor pin, means to release said tractor pin, a support for the trailer, and means positioned by said support to prevent unlocking of the tractor pin.

1,461,881. MERRY-GO-ROUND. ROBERT HROBSKY, Watertown, Wis., assignor of one-half to William G. Miller, Watertown, Wis. Filed Jan. 27, 1922. Serial No. 532,267. 2 Claims. (Cl. 46—27.)

1. In a device of the character described, a center post having a master gear secured to the lower portion thereof, a frame revolvably mounted on said post, seats carried by the frame, a crank shaft located adjacent each seat and journaled in the frame and operatively connected with the master gear, each shaft having two cranks, a walking beam in front of each seat, and a pair of connecting rods connecting opposite ends of the walking beam to the cranks of the crank shaft associated with the next succeeding seat, said walking beam being provided with means engageable respectively by the hands and feet of a person occupying the seat.

1,461,882. AUTOMATIC CLAMP BOLT. STEPHEN A. SLAUSON, Cedar Rapids, Iowa, assignor of twenty-five one-hundredths to John H. Brookman and twenty-five one-hundredths to L. O. Hatch, both of Cedar Rapids, Iowa. Filed Apr. 13, 1922. Serial No. 552,337. 4 Claims. (Cl. 85—32.)

1. Combined with members to be connected, a retaining bolt, a nut therefor adapted for adjustable connection

of a spring therewith, an encircling spring, and an anchor-plate having projections to engage one of said members, and adapted to connect with one end of the spring.

1,461,883. CAR-END CONSTRUCTION. WILLIAM D. THOMPSON and ALFRED R. WILSON, Detroit, Mich., assignors to Hutchins Car Roofing Company, Detroit, Mich., a Corporation of Michigan. Filed June 4, 1920. Serial No. 386,491. Renewed Dec. 11, 1922. 10 Claims. (Cl. 105—410.)

1. In a car body, an extended metallic plate formed of a plurality of sections marginally overlapping and secured to each other, each section being formed with a central portion thereof in one plane, portions on opposite sides and at the ends in a common plane spaced from and parallel to said first-mentioned plane, and transversely extending portions at the sides and ends connecting the portions in the two planes.

1,461,884. FIXTURE FOR TURNING MACHINES. WILLIAM R. ADAMS, Plainfield, and HARRY L. POUND, North Plainfield, N. J., assignors to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 4, 1920. Serial No. 408,237. 5 Claims. (Cl. 82—19.)

1. A fixture for turning machines, comprising a cross-slide mounted to reciprocate transversely of the work, a tool holder carried by the cross-slide and mounted to reciprocate transversely thereof in a direction longitudinally of the work, means for automatically reciprocating the cross-slide, and means for automatically reciprocating the tool holder.

5. In combination with the chuck of a turning machine, a fixture secured to the machine and comprising a base, a cross-slide mounted movably thereon, adjustable springs interposed operatively between the cross-slide and the base, a tool head mounted to reciprocate in transverse ways on the cross-slide, means to feed the tool longitudinally with relation to the work, an elongated roller carried on the tool head and an oval shaped cam mounted adjustably on the chuck and engaged by the roller.

1,461,885. AUTOMATIC VALVE MEANS. GEORGE H. ANDERSON, Kalamazoo, Mich. Filed July 5, 1921. Serial No. 482,477. 5 Claims. (Cl. 137—101.)

1. In a control valve structure, the combination of a casing connected by suitable pipes at the upper portion to the steam space and at the lower portion to the water space of a boiler, a supply pipe leading into the said casing and a delivery pipe leading therefrom within the connecting pipe to the water space of the boiler, a valve, the casing of which comprises an outer chamber connected to said supply pipe and an inner chamber connected to said delivery pipe, a vertically disposed piston valve through bores on the opposite sides of the said central chamber, a piston rod extending upwardly therefrom, a lever fulcrumed on a suitable link to the upper portion of said valve casing and pivotally connected to said stem, a float carried by said lever, coacting for the purpose specified.

1,461,886. CONVERTIBLE VALLEY AND HIP COMPOSITION SHINGLE. FRANK BASEL, Minneapolis, Minn., assignor of one-half to Patrick Halloran, Minneapolis, Minn. Filed June 14, 1922. Serial No. 568,168. 1 Claim. (Cl. 108—24.)

A composition shingle for the roof hip or valley comprising a sheet of flexible material having top and bottom edges diverging from a longitudinal center line along which line the sheet is bent, the side edges of said sheet being perpendicular to its top and bottom edges whereby the sheet can be bent about its center line to various angles and the top and bottom edges thereof can always lie in horizontal planes so that the shingle can be used for roofs of slightly varying pitches and for hips and valleys of different angles.

1,461,887. FLEXIBLE GUARD FOR MACHINE TOOLS. OTTO W. BIRHANZL, Cleveland, Ohio, assignor to The Warner and Swasey Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 20, 1921. Serial No. 493,789. 4 Claims. (Cl. 82—34.)

1. In combination in a machine tool having a slide and ways over which the slide is adapted to move, of a flexible guard associated with said slide so as to move therewith comprising a plurality of overlapping metal plates serving to project over the ways when the slide is moved in one direction.

1,461,888. WHEEL. ROBERT J. BURROWS, Buchanan, Mich., assignor to Clark Equipment Company, Buchanan, Mich., a Corporation of Michigan. Filed Jan. 17, 1920. Serial No. 352,070. 4 Claims. (Cl. 301—63.)

4. A metal wheel comprising a rim, a hub, discs connected with the hub and with the marginal portions of the rim, and transversely disposed elliptical dished reinforcing members independent of said discs and secured to the inner surface of the rim and spaced relation to each other.

1,461,889. VEHICLE WHEEL. ROBERT J. BURROWS, Buchanan, Mich., assignor to Clark Equipment Company, Buchanan, Mich., a Corporation of Michigan. Filed Jan. 17, 1920. Serial No. 352,071. 2 Claims. (Cl. 301—63.)

2. A metal wheel comprising a rim, a hub composed of two telescoping members, one of said members having an intermediately disposed circumferential flange and the other of said members having its inner margin bent outwardly to form an integral radial flange, discs spaced

apart and having their outer edges connected with the rim, the inner margins of said discs being fitted at opposite sides of said circumferential flange, a brake

drum fitted upon one of the members of the hub, and bolts securing the members of the hub, said discs and the brake drum together.

- 1,461,890. EMERGENCY FUEL TANK FOR AUTOMOBILES. JALMAR ALEX CARLSON, Stambaugh, Mich. Filed Apr. 5, 1920. Serial No. 371,520. 1 Claim. (Cl. 158—46.5.)

The combination with an automobile body and its main tank and carbureter, of an auxiliary tank mounted in front of the door at one side of said body and on the foot-board, each said tanks having a pipe leading therefrom, a valve fitting in which the conduits of said pipes meet, and a single valve controlling both of said conduits, said single valve having a valve-stem with a handle thereon in front of the driver in his seat in said automobile.

- 1,461,891. CONCRETE BUILDING. FRANKLIN H. CONEY, Chicago, Ill. Filed Feb. 11, 1922. Serial No. 535,675. 5 Claims. (Cl. 72—15.)

5. A column cap of the class described comprising spaced upper and lower plates with web members be-

tween said plates, said upper and lower plates of the cap having provisions for attachably receiving floor re-

inforcing bars, and horizontally disposed I-beams attached to said plates.

- 1,461,892. COLUMN CAP FOR CONCRETE BUILDINGS. FRANKLIN H. CONEY, Chicago, Ill. Filed Dec. 18, 1922. Serial No. 607,594. 6 Claims. (Cl. 72—15.)

1. A column cap comprising inner and outer reinforcing rings located in different parallel planes, and an annular web member connecting said rings.

- 1,461,893. ATTACHING MACHINE. CHARLES E. CONNER, Auburn, Me., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 26, 1920. Serial No. 426,489. 23 Claims. (Cl. 1—19.)

1. In a machine of the class described, mechanism for operating upon the work, a movable work-support, means

for temporarily retaining the work-support in operating position, means for actuating the retaining means to release the work-support, and means for restoring said work-support to the operating position, said restoring means being controlled in the operation of the machine and independently of movement of the work-support.

1,461,894. SUPPORT FOR SPRING VEHICLES. EUGENE G. DEUCHER, Cleveland, Ohio, assignor to The Universal Crane Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 11, 1921. Serial No. 451,598. 11 Claims. (Cl. 280—106.5.)

1. In combination with a highly sprung vehicle, an axle therefor, a vehicle frame, a spring carried by the said axle for resiliently supporting the said frame on the said axle, a relatively non-yielding adjustable bridge adapted to intervene between the said frame and a point on the said spring relatively near the said axle but not coinciding with the position of the said axle.

1,461,895. DETACHABLE KNOT OR FASTENER FOR COILED SPRINGS. WILLIAM B. FOSTER, Utica, N. Y., assignor to Foster Brothers Manufacturing Company, Utica, N. Y., a Corporation. Filed Nov. 20, 1922. Serial No. 601,994. 4 Claims. (Cl. 5—257.)

1. A detachable knot or fastener for a coiled spring comprising an S-shaped hook at the free end of the coiled spring arranged at right angles to the plane of the end coil of the spring and an outwardly projecting U-shaped loop in the end coil of the spring opposite to and detachably engaging said S-shaped hook.

1,461,896. SAFETY SIGNAL FOR RAILWAY CROSSINGS. CHARLES E. FRY, Bloomfield, Iowa. Filed Mar. 13, 1923. Serial No. 624,726. 1 Claim. (Cl. 246—293.)
In railroad crossing signals and gates, an upwardly and transversely swinging platform between the outer

side of one of the rails and the road crossing, a post at one side of said platform, a signal arm pivoted to the

post, and a single means for simultaneously swinging said signal arm and platform upwardly to an operative position.

1,461,897. TORCH BURNER. OTTO J. GROEHN, Detroit, Mich., assignor to Clayton and Lambert Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 2, 1920. Serial No. 414,257. 1 Claim. (Cl. 158—33.)

In a blow pipe torch for developing intense heat, a flame tube having an open forward end, a vapor discharge nozzle at the rear end of said tube and having a discharge port substantially in alignment with the axis of the flame tube for discharging fuel into said flame tube to mix with air and burn in said tube, an interiorly threaded portion disposed in rear of said nozzle, a stem extending through said threaded portion and adjustable toward and from said discharge port, said stem and threaded portion being in alignment with the axis of said discharge port, said stem being adapted to be withdrawn from said threaded portion, a cleanout member carried by said stem and adjustable toward and from said discharge port, a vaporizing passage leading from a source of supply of fuel to the port of said discharge nozzle, a valve for controlling the supply of fuel to said vaporizing passage located at a position remote to said discharge nozzle, said valve having a stem provided with an adjustment for positively forcing the valve to its closed position so as to control the supply of fuel to the discharge nozzle independent of the cleanout member, and means for limiting the forward movement of said cleanout member so as to prevent the latter from being forced into contact with the metal surrounding the orifice of the discharge nozzle.

1,461,898. SHEET-METAL CUTTING-OFF MACHINE. KARL WILLIAM HALLDEN, Waterbury, Conn. Filed May 22, 1920, Serial No. 383,441. Renewed Oct. 25, 1922. Serial No. 596,912. 8 Claims. (Cl. 164—49.)

1. A cutting-off machine for sheet metal comprising a frame, feed rolls and a cutter-gate supported by the said frame, a bull-gear shaft and a counter-shaft supported by the said frame, mechanism interconnecting the said bull-gear shaft and gate for effecting a reciprocating movement of said gate, gearing interconnecting said

counter-shaft and rolls, means for driving said counter-shaft from said bull-gear shaft comprising a one-way clutch, and retarding means on the said countershaft,

said retarding means operating in opposition to said driving means under driving conditions and serving to check reverse movement of the countershaft under non-driving conditions.

1,461,899. SHEET-METAL CUTTING-OFF MACHINE. KARL WILLIAM HALLDEN, Waterbury, Conn. Filed Dec. 22, 1921. Serial No. 524,091. 1 Claim. (Cl. 164—49.)

A cutting off machine for sheet metal comprising a bed, feed rolls and a cutter-gate supported by said bed, a bull-gear shaft and a one-way intermediate shaft supported by said bed, mechanism operative responsive to rotation of said bull-gear shaft for effecting a reciprocating movement of said gate, gearing interconnecting said intermediate shaft and rolls, driving means for driving said intermediate shaft from said bull-gear shaft comprising a one way clutch, and retarding means on said intermediate shaft, said retarding means operating in opposition to said driving means under driving conditions of operation and serving to check reverse movement of said intermediate shaft.

1,461,900. CORD TERMINAL FOR MASK FASTENERS. GEORGE A. HANFT, Irvington, N. J., assignor to Newark Mask Co. Inc., Irvington, N. J., a Corporation of New Jersey. Filed Dec. 4, 1922. Serial No. 604,719. 1 Claim. (Cl. 24—115.)

A device of the character described including a flat sheet metal body portion having a pair of oppositely disposed substantially parallel ears stamped therefrom to form an opening having one of said ears at each of two

opposite sides thereof, said ears being so arranged that their adjacent edges are in spaced relation to one side of said body portion and are adapted to substantially meet in the plane of the body portion, and a cord overlying said opening beneath said ears, said ears being pressed toward said body portion tightly against said cord to hold the same against movement on said body portion in all directions.

1,461,901. AUTOMATIC BRIDGE GATE. ILKO HARMATA, Boyle, Alberta, Canada. Filed May 11, 1920. Serial No. 380,469. 1 Claim. (Cl. 39—18.)

A device of the class described comprising a frame, a pair of gates slidably supported in said frame, guide means and rollers on said frame for said gates, an opening in said frame for the passage of vehicles, posts on each side of said opening, a platform supported at the bottom of said opening, a panel under said platform rigid to said frame, a plurality of springs mounted upon said panel, said platform resting upon said springs, means operable by depression of said platform to open said gates, said means also operable by raising of said platform to close said gates, said means comprising links attached to the underside of said platform, bell cranks pivotally attached to said links, rods pivotally attached to said cranks, a rod attached at one end to each of said gates, the other end of each of said rods attached to the free end of each of said first named rods, and additional rods attached at one end to said frame and at the other end to said second named rods.

1,461,902. LEATHER GASKET. BRADFORD B. HOLMES, New York, N. Y., assignor to John W. Weeks, Secretary of War of the United States of America, trustee. Filed Apr. 19, 1922. Serial No. 555,599. 5 Claims. (Cl. 69—21.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. A method of forming gaskets of substantially cross sectional U-shape, including bringing a sheet of leather to the proper thickness, softening the leather by the application of oil, cutting the leather to form a disc of the desired size, drawing the disc to a cup, stretching the cup to a substantially shallow bowl shape and severing the rim and a portion of the bottom from the bowl.

5. A method of forming a gasket of substantially cross-sectional U-shape, the sides of the U lying in planes parallel with the plane of the gasket, including drawing a disc to form a shallow bowl then severing the sides of the bowl from the rim and bottom.

1,461,903. RUNNING-BOARD APRON GUARD. SAMUEL L. HOOPES and ARTHUR A. GIETZELT, Fresno, Calif. Filed Apr. 18, 1921. Serial No. 462,137. 2 Claims. (Cl. 280—169.)

1. A guard for the running board apron of a vehicle comprising a substantially rectangular plate mounted on said running board to extend vertically; a hinged connection between said plate and running board; and means to detachably lock said plate in its vertical position.

1,461,904. CLEANING IMPLEMENT. GEORGE ARTHUR HOYEM, Lennep, Mont. Filed Sept. 28, 1921. Serial No. 503,904. 3 Claims. (Cl. 15—104.18.)

1. A spark plug cleaner, comprising a cylindrical body provided at one end with opposed, reduced, resilient legs, each leg terminating in an enlarged arcuate head, said heads having scraper blades struck outwardly therefrom, said blades extending in the same general direction as said body.

1,461,905. TRUCK BODY. ARTHUR SHERIDAN HUGHES, Mansfield, Ohio. Filed Mar. 22, 1919, Serial No. 284,293. Renewed May 15, 1923. 26 Claims. (Cl. 296—28.)

1. A vehicle body having side members of sheet metal, a bottom or floor of sheet metal of channel form and including a plurality of sheet metal channels with edge flanges, some in juxtaposition and others engaging the sides of the body, and cross bars traversing and interlocking both the juxtaposed flanges and the sides of the body where engaged by the flanges, the interlocking connection between the cross bars, the floor channels and the sides holding said parts in assembled position against movement either lengthwise or crosswise of the body.

1,461,906. SHEET-METAL CONSTRUCTION FOR TRUCK BODIES, RACKS, ETC. ARTHUR SHERIDAN HUGHES, Mansfield, Ohio. Filed Dec. 26, 1919. Serial No. 347,428. 36 Claims. (Cl. 296—28.)

1. The combination with a plurality of channel members having their flanges facing in one direction, said flanges having spaced entering slots, of a plurality of channel bars arranged crosswise relatively to the channel members with their flanges facing in the opposite direction, said cross channel bars having their flanges provided with spaced entering slots, the flanges of said members and bars interlocking by means of said slots, the slots in the flanges of said members being of a depth to cause the flanges of the channel bars to enter the same and bear against the inner faces of said members.

1,461,907. SHEET-METAL CONSTRUCTION FOR TRUCK BODIES, ETC. ARTHUR SHERIDAN HUGHES, Mansfield, Ohio. Filed Dec. 26, 1919. Serial No. 347,429. 8 Claims. (Cl. 296—28.)

1. In a body, a plurality of channel members having their flanges facing outwardly and placed in juxtaposition and secured together to form the bottom of said body, the flange of one member being lapped over the flange of the adjacent member, each of said channel members having their flanges split and being bent upwardly a plurality of times to form integral portions comprising the sides of said body.

1,461,908. OIL BURNER. HENRY IZARD, Portland, Oreg. Filed Mar. 8, 1921. Serial No. 450,562. 4 Claims. (Cl. 158—28.)

2. In an oil burner, the combination of an open top combustion box having a baffle plate in the center of its

bottom with an inverted air supplying elbow suspended over the side of said box and having its outlet over said baffle plate, means for forcing air through said elbow against said baffle and an oil supply pipe within said elbow and having its discharge over said baffle.

1,461,909. CENTRIFUGAL SEPARATOR. CHARLES B. JANDOS, Windsor, Colo., assignor of two-fifths to Emilio D. De Soto, Denver, Colo. Filed Apr. 5, 1919. Serial No. 287,715. 9 Claims. (Cl. 210—68.)

2. A centrifugal separator comprising a rotary, circumferentially perforated basket, a rotary spiral blade inside the basket, a receiving surface at the lower end thereof, a mantle around the basket, and means for spraying a wash-water onto material carried on the blade.

1,461,910. SINGLETREE CONSTRUCTION. LEON JEANNOTTE, Gravelbourg, Saskatchewan, Canada. Filed Dec. 28, 1921. Serial No. 525,525. 1 Claim. (Cl. 280—102.)

Singletree having brackets mounted on the outer terminals thereof, the outer terminals of the said brackets extending inwardly, springs mounted on the said singletree, the outer terminals of the said springs embracing the said brackets, auxiliary compression springs adapted to tension the said springs outwardly, abutments carried by the said springs and adapted to keep the said springs in spaced relation from the inwardly extending terminals of the said brackets and retain trace connections when attached to said terminals.

1,461,911. PNEUMATIC SUPPORT. GUS JORDAEN, Palm Beach, Fla. Filed Aug. 19, 1922. Serial No. 582,914. 3 Claims. (Cl. 9—20.)

1. A pneumatic support having a generally rectangular inflatable body provided with relatively small spaced apart tubular extensions into which air may be blown for inflat-

ing the body, said extensions having open free ends and being of a length adapting the same to effective tying

and to serve the double purpose when tied of retaining air within the body and augmenting the supporting surface of the body.

1,461,912. VEHICLE WHEEL. ADELBERT F. KELLY, Spokane, Wash. Original application filed Mar. 29, 1920, Serial No. 369,765. Divided and this application filed Dec. 30, 1920. Serial No. 434,045. 5 Claims. (Cl. 152—50.)

1. A spring-spoke wheel hub structure including a hub presenting a plurality of sockets disposed thereon in annularly spaced relation, complementary pairs of oppositely bowed spring spokes having inner portions extending inwardly through said sockets, means for securing the inner portions of each pair to said hub, and resilient means in each socket yieldingly to resist distortion of said spoke pairs.

1,461,913. PROPELLER FOR FLYING MACHINES. WILLIAM H. KELLY, Cheyenne, Wyo. Filed Apr. 9, 1917. Serial No. 160,610. 14 Claims. (Cl. 170—170.)

1. A propeller including blades arranged so that a straight line connecting any two points in the front

1,461,918. HYDROMETALLURGICAL PRECIPITATION OF COPPER. FREDERICK LAIST, Anaconda, Mont., assignor to Anaconda Copper Mining Company, a Corporation of Montana. Filed Apr. 20, 1920. Serial No. 375,261. 5 Claims. (Cl. 75-18.)

1. Method of precipitating metallic copper from solutions comprising introducing into the solution maintained under appropriate superatmospheric pressure and at a temperature below that at which substantial reaction occurs sulfur dioxide in quantity more than would be sufficient to saturate the solution at atmospheric pressure, and thereafter raising the temperature to effect the precipitation of copper, whereby metallic copper substantially free from sulfur compounds is obtained.

1,461,919. CUT-OFF SAW. THOMAS L. LA MALTA, Memphis, Tenn. Filed Apr. 12, 1922. Serial No. 551,790. 12 Claims. (Cl. 143-54.)

1. In a cut off saw, a frame, a feed table mounted transversely thereon, and means for actuating said table, oppositely disposed saw arbors lying substantially along the longitudinal axis of the frame, saws mounted on the said arbors at the inner or contiguous ends thereof, a bearing for the saw end of each arbor, carrying the said arbor longitudinally fixed therein, a bracket carrying the said bearing, adjustably mounted on the said frame, means for clamping the said bracket to and unclamping the same from the said frame, means for moving the said bearing longitudinally along the said frame, a fixed bearing for the outer end of each saw arbor, rigidly mounted on the said frame, a spline extending along the outer portion of the said arbor and fastened thereto, a belt pulley slidably mounted on each arbor and having a key way adapted to receive the said spline, a hub extending laterally beyond the face of the pulley and journaled in the said fixed bearing, and a collar to prevent longitudinal motion of the said pulley hub in the said bearing.

1,461,920. MUSICAL-INSTRUMENT RACK. ROBERT E. LARSON, San Diego, Calif. Filed July 25, 1922. Serial No. 577,312. 1 Claim. (Cl. 248-30.)

An instrument rack comprising a base member, an upright member mounted on said base member, an adjustable member provided at one end with a horizontal

portion with a plurality of curved instrument support portions each off-set on said horizontal portion, adjustably mounted in said upright member, adjustable support members mounted on said upright member, and a separating member mounted on said upright member between said two last mentioned support members.

1,461,921. ELECTRIC GAS LAMP. ANTON LEDERER, Vienna, Austria, assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed May 16, 1914, Serial No. 839,089. Renewed May 3, 1921. Serial No. 466,400. 7 Claims. (Cl. 176-122.)

1. An electric gas lamp comprising a gas-filled envelope or container, in combination with conducting electrodes, one of which is covered with an oxide and constitutes a negative electron emitter which forms one electrode of a rectifier and the other of which is made of one of the alkali metals, and means for directly passing current through the electron emitting electrode.

1,461,922. COMBINED TOOTHBRUSH AND DENTIFRICE CONTAINER. WILLIAM E. LITTLE, Chicago, Ill. Filed May 5, 1922. Serial No. 558,634. 5 Claims. (Cl. 15-135.)

1. In combination, a tooth brush having a duct leading to the bristles thereof and having a handle, a collapsible tube having a partition forming a pair of pockets, one of which is adapted to enclose substantially the entire length of said handle, and the other of which is adapted to contain paste, said last-mentioned pocket communicating with said duct and permitting said paste to be discharged therethrough when said tube is squeezed.

1,461,923. COMPACT ATTACHMENT. ALFRED M. LOCKE, Milwaukee, Wis. Filed Nov. 9, 1922. Serial No. 599,796. 6 Claims. (Cl. 132-83.)

6. A vanity case comprising a circular bottom portion and a hinged circular and flanged top portion cooperating therewith, a circular plate positioned

within said top portion and having a depressed cup shaped portion spacing said plate from the top of said top portion, and having a crescent shaped cut-out and a mirror positioned between said plate and said top, and having a marginal portion contacting with the flange of said top, and a second marginal portion contacting with the wall of said depressed cup portion.

1,461,924. VEHICLE HEADLIGHT. OTTO G. LUYTIES, Mount Vernon, N. Y. Filed Mar. 14, 1918. Serial No. 222,279. 18 Claims. (Cl. 240—48.6.)

1. In a vehicle headlight, in combination, a curved rear reflector, an electric bulb mounted therein, and a unitary device comprising a light-diffusing member surrounding said bulb, cushioning means and resilient securing means, said securing means, cushioning means and light-diffusing member being connected one to another.

1,461,925. FLYTRAP. JOSEPH A. MACK, Minturn, Colo. Filed Apr. 22, 1922. Serial No. 555,982. 3 Claims. (Cl. 43—118.)

3. In a fly-trap comprising in combination a base, a cylindrical container of woven wire fabric secured to said base, an entrance port extending along said container near the base, said port comprising two rows of spaced inwardly projecting wires adapted to permit the flies to move inwardly into the container but not outwardly therefrom, an end member secured to one end of the container, a pan like member secured to the other end thereof and removably held in place thereon, said pan having an inwardly projecting annular flange, a handle extending through pan and into the container, a disc secured to the inner end of the handle and adapted to cooperate with said flange to form a cover, and a feed pan adapted to be placed on said base and having its upper side opening against the screen cylinder.

1,461,926. RAILWAY TICKET. PATRICK F. MALLOY, Milwaukee, Wis. Filed Feb. 4, 1922. Serial No. 534,202. 1 Claim. (Cl. 283—23.)

A railway ticket provided with a baggage checking section arranged at one corner thereof, said section being defined by a line of perforations whereby the same may be easily detached from the ticket and the resulting condition of the ticket made easily discernable.

1,461,927. TYPOGRAPHICAL MOLD. HARLEY J. MEGLEY, Chicago, Ill. Filed Jan. 30, 1922. Serial No. 532,656. 33 Claims. (Cl. 199—55.)

1. In a mold of the class described, a base member having an offset surface, a plate secured thereto, a jaw member having a depending flange slidably mounted between said offset surface and said plate member, spring means carried by said base member for yieldably maintaining said jaw member in closed position, a cap member, a second jaw member slidably mounted in the plane of movement of said first jaw member, said second jaw member having guide slots cooperable with posts carried by said cap member and projecting arms guided by said base member.

1,461,928. WHEEL TIRE. FREDERICK C. MILLER, Chicago, Ill. Filed Oct. 24, 1921. Serial No. 509,936. 8 Claims. (Cl. 152—8.)

1. In a device of the kind described and in combination, a felly adapted to receive an outer casing thereon, a pair of substantially semi-cylindrical members arranged annularly within said casing, the adjacent annular side

edges of said members spaced apart, circumferentially spaced springs extending through said casing between both of said spaced side edges in a direction substan-

tially parallel to the axis of the casing, and means for yieldably resisting the radial movement of said semi-cylindrical members.

1,461,929. MOLD. GILBERT K. MONROE, Sidney, Ohio. Filed Jan. 31, 1922. Serial No. 532,989. 12 Claims. (Cl. 25--127.)

1. In a structure of the character described, inner and outer independent walls forming a molding space, an outer retaining member, and means carried by said member for supporting said walls in spaced relation with each other.

1,461,930. STEAM BOARD. WALTER W. NOBIENSKY, Janesville, Wis. Filed Jan. 27, 1923. Serial No. 615,209. 1 Claim. (Cl. 26-7.)

A steam board comprising a casing having a transversely arched, longitudinally tapered, perforated top, and downwardly converging lower side walls slanting downwardly towards the larger end of said table, a drain pipe opening into said casing adjacent to its lowest portion, a steam pipe extending into said casing and branching into a pair of substantially parallel pipes of unequal length, the longer of such pipes extending into the narrower portion of said casing, said pipes having downwardly opening apertures whose axes roughly parallel the converging lower side walls of said casing, whereby moisture carried by the steam will be blown downwardly and dry steam will rise from the central portion of said casing and pass upwardly through said apertured top.

1,461,931. HAND FEED FOR DRILL PRESSES. OSMOND A. OSMONDSON, Chicago, Ill. Filed Jan. 8, 1921. Serial No. 435,963. 5 Claims. (Cl. 77-32.)

1. In a hand feed for drill presses the combination with a spindle actuating gear and an operating member, of change speed mechanism for transmitting motion from said member to the gear, said mechanism including an internal gear, a cage, and a train of gears in the cage and meshing with the internal gear, means under the control of the operator for shifting said cage to one position to reduce the speed of the driven gear, to another position to insure equal speed of said member and gear and to a third position to uncouple the drive connection between said member and gear, and means for securing said shifting means in one of its positions.

1,461,932. TOY. STANLEY PENKSA, Long Island City, N. Y. Filed Aug. 23, 1920. Serial No. 405,373. 12 Claims. (Cl. 46-45.)

1. A device of the character described consisting of a spool having vertically extending wheel forming flanges upon the spool, a resilient band extending through the bore and manually operable means for winding said band, one of said wheels being of greater diameter than the other, said means consisting of a lever over which one end of said band is looped.

1,461,933. SPEED GOVERNOR FOR INTERNAL-COMBUSTION ENGINES. E RALPH PIERCE, Rochester, Mich., assignor to Monarch Governor Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 31, 1919. Serial No. 334,748. 5 Claims. (Cl. 137-153.)

4. A governor for internal combustion engines comprising a controlling member subjected to variable pressures incident to variations in operating the engine, a plurality of springs arranged to form an opposing pres-

sure upon said member, and means for limiting the action of one of said springs whereby the combined action

of said springs corresponds to a predetermined characteristic such as to maintain under changing loads a substantially constant speed.

1,461,934. REGISTER FOR POSTAGE-MARKING MACHINES. ARTHUR H. PITNEY and JACOB W. OGDEN, Stamford, Conn., assignors to Universal Postal Machines Corporation, Stamford, Conn., a Corporation of Delaware. Filed June 7, 1922. Serial No. 566,593. 19 Claims. (Cl. 101-91.)

1. An attachment for the purpose specified, comprising a base, a rotatable printer mounted thereon; a casing on the base beside the printer; a total counter and a sub-total counter in the casing; gearing between the printer and said counters whereby each counter is turned one unit for each rotation of the printer; and means for locking the printer against rotation when the attachment is removed from the machine whereby it is operated, and for releasing the printer when the attachment is placed in the machine.

1,461,935. POTATO DIGGER. AUGUST J. RAASCH, EDWARD H. RAASCH, and HANS A. OLSEN, Milwaukee, Wis. Filed Feb. 1, 1921. Serial No. 441,558. 4 Claims. (Cl. 55-9.)

1. A potato digger comprising a vehicle, a plurality of conveyors pivotally connected to the vehicle and extending downwardly and forwardly therefrom, a beam extending downwardly and forwardly from the vehicle and having a plurality of transversely disposed arcuate guides at its forward end concentric with the pivots of the respective conveyors and on which the forward ends of the conveyors are adjustably supported, means for scooping the potatoes from the ground and delivering them onto the conveyors and means for operating the conveyors to deliver the potatoes onto the vehicle.

1,461,936. SAND OR LIKE MIXING MACHINE. JOHN WILLIAM RICHARDS, Coseley, near Bilston, England, assignor to A. Harper Sons and Bean Limited, Dudley, Worcestershire, England. Filed Dec. 9, 1922. Serial No. 605,779. 4 Claims. (Cl. 259-9.)

1. In a sand mixing machine, a trough container of depth greater than its breadth, apertures for respectively introducing material into the trough and for discharging it therefrom, a rotatable shaft eccentrically mounted within the trough, two solid, independent helical blades of right and left-hand pitch, respectively, carried by the shaft and disposed respectively toward opposite ends thereof, the inner ends of the said helical blades terminating in a substantially common plane.

1,461,937. AUTOMATIC SWITCH STAND. SHERROD RIDDEL, Springfield, Ill., assignor of one-fourth to Warren W. Albright and one-fourth to William Lahners, both of Decatur, Ill., and one-fourth to James J. Graham, Springfield, Ill. Filed Mar. 15, 1922. Serial No. 543,978. 2 Claims. (Cl. 246-40.5.)

1. A switch stand comprising a stationary screw-threaded sleeve, a screw-threaded actuating member engaged with the threads in said sleeve, an operating rod connected to said actuating member whereby said rod will be actuated longitudinally when said actuating member is turned in said sleeve, means fixed to said actuating member to be forcibly engaged for imparting an initial rotary motion to said actuating member, and a weighted lever mounted on the end of the actuating member for continuing the rotary movement of said actuating member after the initial impetus has been imparted to said means.

1,461,938. SUPPORTING DEVICE. JACOB B. ROSE, Cleveland, Ohio, assignor to The Osborn-Crew Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 13, 1921. Serial No. 507,529. 6 Claims. (Cl. 248-24.)

1. In a device of the character described, a base member, a supporting member pivotally mounted at one of its ends on said base, said base being provided with sur-

faces adapted to be engaged by the supporting member as it is moved on its pivot to thereby deform said sup-

porting member from its natural position, whereby the supporting member returns to its initial position when released.

1,461,939. WIRE CART. EDGAR R. SAGER, U. S. Army. Filed Sept. 4, 1920. Serial No. 408,340. 11 Claims. (Cl. 179—29.)

1. A cart of the character described, comprising a reel mounted on and rotatable with the cart axle, shafts engaged with the axle and electrically connected to said reel through the axle, and intelligence transmitting and receiving means supported on said shafts and electrically connected thereto.

1,461,940. TRANSLATIONAL SECTIONAL-MOLD ASSEMBLY. ERNEST E. SCHENK, Webster City, Iowa. Filed Apr. 7, 1922. Serial No. 550,539. 4 Claims. (Cl. 25—99.)

1. In mechanism of the character described, separably assembled and engaged, and longitudinally aligned molds, and translational means therefor including projections thereon insertable between and withdrawable from the molds to close the ends of the molds.

1,461,941. TRANSMISSION DRIVE. WILLIAM H. SCHULZE, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed June 23, 1922. Serial No. 570,482. 2 Claims. (Cl. 74—7.)

1. In a motor vehicle, an instrument drive connection comprising the propeller shaft housing member of a universal joint between said shaft housing and the transmission casing, said member having a gear pocket situated laterally of the propeller shaft the axis of said pocket extending forwardly and obliquely with respect to the shaft, a gear cut in the shaft at the entrance to said pocket; a screwed-in closure for said pocket having

a journal bearing therethrough; a shaft journaled in said closure journal bearing; a gear on the inner end of said shaft meshing with the gear on the propeller

shaft; said closure being exteriorly formed for attachment thereto of a casing of a flexible shaft, and the shaft journaled therein being exteriorly formed for coupling to the rotary member of the flexible shaft.

1,461,942. SWITCHING APPARATUS. WILLIAM M. SCOTT, Tredyffrin Township, Chester County, Pa. Filed May 21, 1920. Serial No. 383,031. 45 Claims. (Cl. 200—89.)

44. The combination with a switch unit comprising a movable contact member and operating and restraining means therefor, of a non-closable unit comprising an actuated member, an actuating member for actuating said actuated member and disengageable therefrom, a link connecting said actuated member with said operating means of said switch unit, and means for effecting disengagement of said actuated member from said actuating member comprising coacting members one of which has an elongated arcuate surface disposed adjacent to and adapted to engage with the other, and electro-responsive means for controlling said restraining means and for effecting engagement of said co-acting members to disengage said actuated member from said actuating member.

45. Circuit breaker mechanism comprising a movable contact member, a plural link toggle co-acting with said contact member for operating the same, main and secondary operating levers, means forming a detachable connection between said operating levers, and a pivotal operating connection between said secondary operating lever and said toggle.

1,461,943. HEATER-CASING CONSTRUCTION. JACOB J. SEEMANN, Utica, N. Y., assignor to Utica Heater Company, Utica, N. Y., a Corporation. Filed July 24, 1922. Serial No. 576,988. 8 Claims. (Cl. 126—114.)

1. In a heater casing construction, the combination of a panel front having its side edges provided at intervals with bolt-receiving apertures, outer casing-holding means at the rear of each side edge of said panel front with

bolt holes opposite the bolt holes in the panel, bolts extending loosely through said panel apertures and extending through said outer casing-holding member and projecting inwardly thereof, a spool mounted on said inward portion of each bolt, a nut on the inner end of

each bolt, an outer casing held between the rear of the panel front and said outer casing-holding member and an inner casing having apertures near its vertical edges and registering with said spools whereby said inner casing is hooked onto said spools.

1,461,944. IMPULSE SENDER. MICHAEL SETTER, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 8, 1918. Serial No. 227,402. 9 Claims. (Cl. 74—54.)

1. In a ratchet driven mechanism, an element to be driven having ratchet teeth on one of its surfaces, a hand operated driving element, having an opening therein, a pawl adapted to be inserted into said opening and cooperating with said driving element to drive said element, and a leaf spring mounted adjacent said opening and having a projection which acts as a sole support for said pawl and holds it in engagement with the ratchet teeth of the driven element through said opening.

1,461,945. DEVICE FOR CONNECTING SUCTION PIPES TO TANKS AND OTHER RECEPTACLES. WILLIAM C. SHANLEY, Des Moines, Iowa. Filed Feb. 21, 1921. Serial No. 446,651. 3 Claims. (Cl. 285—124.)

1. The combination with a suction pipe of a gland for connecting the pipe with a receptacle, comprising a

threaded body portion adapted to be secured to the receptacle and having an internally threaded chamber, a threaded sleeve adapted to engage the internally threaded part of the gland, packing held in place within the gland by the sleeve, a cap through which the suction pipe extends and which has a threaded engagement with the gland and packing, held in place on the gland by the cap.

1,461,946. RACK FOR DRYING SEED CORN. PAUL E. SIEVERT, Watertown, Wis. Filed Oct. 12, 1922. Serial No. 594,003. 2 Claims. (Cl. 34—26.)

2. A device of the character described comprising a pair of spaced uprights having their edges provided with inclined recesses, brace members connecting said uprights, a cover supported above the uprights and provided with upturned edges cutaway at the corners to permit drainage of the cover, rack bars detachably mounted in said recesses and provided with pins projecting therefrom, and guards carried by said uprights and surrounding the same to prevent access of rodents to the rack bars.

1,461,947. WINDOW-CLEANING DEVICE. PAUL SPORER, Chicago, Ill. Filed May 13, 1920. Serial No. 380,969. 7 Claims. (Cl. 15—130.)

1. In a device of the class described, a cleaning member comprising a casing having an open face, a revoluble washing element, bearing plates for said element mounted in said casing and movable toward and from said open face, means for limiting the advance of said plates toward said open face, springs normally maintaining said plates in their advanced position, and means for supplying fluid to said washing element.

1,461,948. INTERNAL-COMBUSTION ENGINE. BOLES-LAW STOSIK, Denver, Colo. Filed May 2, 1921. Serial No. 465,993. 5 Claims. (Cl. 123—69.)

1. In an internal combustion engine the combination with a cylinder having two inlet ports and one exhaust port in the side thereof and a bypass passage in the wall thereof, of two tubular pistons arranged to create three chambers in the cylinder, to cover and uncover the said inlet ports and to register with the said bypass passage thru a port provided in the wall of each piston in order to connect the three chambers for the purpose specified.

1,461,949. DIAL-SCALE PRINTING DEVICE. MELVIN ARVINE SWEET and GEORGE WILLIAM BRITTON, Hamilton, Ontario, Canada. Filed June 20, 1919. Serial No. 305,516. 8 Claims. (Cl. 234—1.)

1. In a dial scale recording device, the combination with the dial and a circular frame surrounding the dial, of type characters arranged on the perimeter of said dial frame, a carriage supported from and embracing said dial frame and adapted to be moved concentrically therearound being operable from the front of the dial, and means manually operable from the front of the scale supported by said carriage for taking an impression from the type.

4. A dial scale recording device, comprising a rim, type characters arranged on said rim in radial alignment with the scale markings of the dial and corresponding therewith, a rotatable member adapted to be moved around said rim, a supplementary type supporting member arranged upon said rotatable member and adapted to align with individual numerals or characters, and means for effecting the impression of the type.

1,461,950. BEEHIVE. JOHN TOTH, Bartonville, Ill. Filed Apr. 1, 1922. Serial No. 548,599. 2 Claims. (Cl. 6—1.)

1. A bee hive including in its construction a lower section comprising a base, a pair of walls erected thereon spaced from one another in parallel planes, a support for each wall for maintaining it in fixed position and spacing it above the base, each wall at its vertical edges being rabbeted, the rabbets being on the surfaces of said walls that face one another, other walls abutting at their ends upon the first named walls, the second named walls also being rabbeted to fit the rabbets of the said first named walls to form a cold tight joint, means to secure the walls in position but permit their quick removal, an upper section comprising walls likewise rabbeted separable from one another adapted to rest upon the walls of the lower section, means to secure the walls of said upper section against lateral displacement with respect to the walls of said lower section, the enclosed space of the upper section communicating with that of the lower section, and a closure for the upper section constituting a covering for the entire hive.

1,461,951. TRACTOR WHEEL. WALLACE W. TUTTLE, Detroit, Mich. Filed June 23, 1920. Serial No. 391,000. 5 Claims. (Cl. 301—53.)

3. In a tractor wheel, a hub member, a series of spokes emanating from each end thereof, a pair of rim members, each secured to one of the series of spokes, a plurality of cleat members secured to the rim members and spacing the same, the cleat members being positioned at an angle to the axis of rotation of the wheel and each being provided with a pocket open to the periphery of the wheel and extending inwardly toward the hub in the space between the rim members, the said socket of each cleat member being attached to an adjacent spoke.

1,461,952. EXTENSION LADDER. GEORGE H. WALCHLI, St. Louis, Mo., assignor to Kant-Break Ladders, Inc., St. Louis, Mo., a Corporation of Missouri. Filed May 6, 1922. Serial No. 558,931. 3 Claims. (Cl. 228—58.)

1. In a ladder having a pair of wooden sides and wooden rungs between said sides with their ends countersunk therein, said sides being provided with grooves along their edges and across their upper ends, a con-

tinuous wire embedded in the grooves of each side and spaced bracing bolts through said sides, a hook at one

end of each bolt, a nut threaded on the other end thereof and a hooked washer under said nut, said hooks engaging with said wire.

1,461,953. DISK SPOOLING MACHINE. GEORG MAX WEHNER, Dresden, Germany. Filed May 24, 1921. Serial No. 472,076. 5 Claims. (Cl. 242—16.)

1. In a spooling machine the combination of a spool carrying mechanism having a driving roller, a driving wheel, a thread regulating mechanism having a roller adapted to roll in contact with the spooled yarn, a spring connected with the spool carrying mechanism and operative to force the driving roller thereof in contact with said driving wheel, a weaker spring connected with said thread regulating mechanism and operative to press its roller in contact with the winding spool in yielding opposition to said spring connected with the spool carrying mechanism until said spool is filled to a determinate point, and means for arresting at the determinate point the yielding action of said thread regulating mechanism, whereby the spool carrying mechanism is disconnected from the driving mechanism and stopped.

1,461,954. TEMPORARY BINDER OR LOOSE-SHEET HOLDER. GEORGE P. WIGGINTON, Kalamazoo, Mich., assignor to Kalamazoo Loose Leaf Binder Co., Kalamazoo, Mich. Filed June 10, 1921. Serial No. 476,417. 12 Claims. (Cl. 129—8.)

8. In a loose leaf binder, the combination of cover members, binding bars, post bars provided with sheet-engaging posts and with means for detachably engaging said covers and binding bars.

1,461,955. SPOTLIGHT BRACKET. RALPH E. WILLIAMS, Santa Ana, Calif., assignor to Williams Manufacturing Company, a Corporation of California. Filed Sept. 17, 1917. Serial No. 191,840. 3 Claims. (Cl. 240—7.)

3. In an adjustable headlight, a mounting bracket, a mounting member on a vertical pivot on the bracket, a horizontal pivot shaft revoluble in the mounting member and carrying a lamp, said shaft having two lugs spaced transversely of the shaft, and changeable stop means on the bracket that may be changed between positions where it lies beneath either one or the other of the shaft lugs.

1,461,956. ODOMETER-TRAIN-RESETTING DEVICE. ANDREW C. WOOD, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Apr. 21, 1920. Serial No. 375,515. 3 Claims. (Cl. 235—144.)

1. In a counting mechanism and the like which comprises a main train shaft, and a series of decimally-successive counter wheels in laterally successive position thereon with the initial wheel of the series positively

engaged with the shaft for rotation and the remaining wheels of the series mounted loose on the shaft for rotation, and which comprises also means for carrying from each decimally lower denomination wheel to the next higher denomination wheel in the advance direction of the lower denomination wheel, and regular means for rotating the shaft to rotate the lower denomination wheel in advance direction; one-way-positive engaging means for engaging the shaft with the wheels above the lowest denomination in the rotation of the shaft in reverse direction; means for disengaging the shaft from the regular advance driving means, and means separate from said advance driving means for rotating the shaft in either direction at will.

1,461,957. PROCESS OF RECOVERING TIN FROM IMPURE ORES. HARRY H. ALEXANDER, Westfield, N. J., assignor to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 28, 1919, Serial No. 293,183. Renewed Apr. 20, 1922. Serial No. 555,796. 12 Claims. (Cl. 75—17.)

1. In the art of extracting metallic tin from ores, the process which consists in treating the ore in a blast furnace with suitable material adapted to form silicates of tin, and removing said silicates of tin as a slag.

1,461,958. COUPLING. FRANK O. ARNOLD, Duluth, Minn. Filed May 16, 1921. Serial No. 470,094. 2 Claims. (Cl. 285—58.)

1. The combination with a coupling of the character described comprising two like separable flanged halves, of means for automatically holding the halves together when united comprising a pivotally mounted depressible dog extending through one of the two diametrically opposed holes in the flange of each half.

1,461,959. SHOCK ABSORBER. ROBERT ARROWSMITH, Homestead, Mont. Filed Jan. 10, 1922. Serial No. 528,282. 2 Claims. (Cl. 267—17.)

1. A shock absorber for vehicles comprising in combination with a main spring, of twin compression arms, a cushioning element interposed between and connecting the free extremities of said arms, one end of one of said arms being pivoted upon the other of said arms at a point in its length, a perch pivotally supporting the first mentioned arm, the said second mentioned arm having one end curved beneath the first mentioned arm

and pivotally connected with the adjacent extremity of the main spring, and a cushioning element interposed between said curved extremity of the second mentioned arm and the main spring for the purpose specified.

1,461,960. SIRUP JAR. CHARLES L. BASTIAN, Chicago, Ill., assignor to The Bastian-Blessing Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 3, 1919. Serial No. 274,629. 7 Claims. (Cl. 225—35.)

1. In a liquid dispensing apparatus, a counter or the like, a pipe associated with the counter or the like for supplying fluid under pressure, a jar supported by the counter or the like and detachable with respect thereto, means in the jar for measuring a charge of liquid of predetermined volume, a discharge nozzle carried by the jar, a passage in the jar connecting the measuring means with the discharge nozzle, a second passage in the jar associated with the measuring means, valve means carried by the jar for controlling the second passage, and means for detachably connecting the second passage to the pipe.

1,461,961. PAPER FOLDING BOX. SAMUEL BERGSTEIN, Middletown, Ohio, assignor to Interstate Folding Box Company, Middletown, Ohio. Filed Aug. 10, 1922. Serial No. 580,839. 2 Claims. (Cl. 229—38.)

1. A paper folding box, consisting of a one-piece forming blank comprising parts arranged end to end one with another in a strip, the opposite ends of the strip being adapted to be joined one to the other to form the sides and ends of the box, the top and bottom of the box being open, a part attached to one of said side parts, extended laterally at right angles thereof, and having opposite longitudinally extended flaps and a laterally extended flap adapted to be folded and tucked in one of said openings from the bottom of the box and to reinforce the ends and one side thereof, and a part attached to the other of said side parts, extended laterally at right angles thereof, oppositely of said bottom part, and having a laterally extended flap adapted to be folded and tucked in the other of said openings to form the top of the box.

1,461,962. EGG BEATER. ALEXANDER BEVAN, Providence, R. I. Filed Feb. 24, 1920. Serial No. 360,683. 3 Claims. (Cl. 259—132.)

1. An egg beater comprising a supporting frame forming a handle at its upper end and a rest at its lower end, upper and lower bearing-bars detachably secured to said frame, a driving gear, a driving shaft mounted in said bearing-bars, a pinion on said shaft engaging said driving gear, an inner beater frame, a coupling connecting said beater frame to said shaft, a bearing member rotatably mounted on said shaft between said coupling and said lower bearing-bar and retained from longitudinal movement thereby, a pinion on said rotatable bearing member engaging said driving gear, and an outer beater frame supported on said rotatable bearing member whereby said beater frames are rotated in opposite directions.

1,461,963. TRENCH DEFENSE. JOSEPH BIENECK, San Antonio, Tex. Filed Jan. 24, 1923. Serial No. 614,525. 2 Claims. (Cl. 89—36.)

1. In a military trench having lateral recesses, armored structures disposed in the recesses at spaced intervals, said structure being adapted to protect its inmates, loopholes in said structure, means for ingress and egress thereto, means for raising and lowering said structure, and a supplementary flat roof thereover adapted to be disposed level with the soil.

1,461,964. TIMING DEVICE FOR CREAM TESTERS. SILAS ZANE BLAND, Neoga, Ill. Filed Oct. 5, 1922. Serial No. 592,546. 2 Claims. (Cl. 161—15.)

1. In a structure of the character described, a frame including spaced plates and a train of gearing, including a ratchet wheel, a signal including a striker movably mounted, a rotatably mounted sleeve extending axially of said ratchet wheel, a spring coiled about said sleeve and having one end connected therewith and its other end connected with a portion of said frame, a dial, an

arm carried by said sleeve and extending in operative relation to said dial and movable into and out of position for operative engagement with said striker, and a pawl carried by said arm and engaging said ratchet wheel, the

pawl moving freely over the ratchet wheel when the arm is swung to a set position and the pawl engages the ratchet wheel to permit control of the swinging of said arm by said gearing when the arm is moved toward operative engagement with said striker by said spring.

1,461,965. TRACTOR STEERING MECHANISM. JOSEPH G. BOLTE, Davenport, Iowa. Original application filed June 26, 1919, Serial No. 306,777. Divided and this application filed Dec. 17, 1921. Serial No. 523,250. 3 Claims. (Cl. 280—93.)

1. In a tractor steering mechanism a trussed frame supporting an arched collar capable of pivotally supporting an engine thereon and having spaced in either of its ends perpendicular boxing means, one of which boxings is formed into a stub axle having radial gears the other of said boxings is formed into a flanged plate having radial gears and lever means suitable for permitting them to be operated connectively with a steering mechanism by means of steering rods and pull rods all for the purposes specified.

1,461,966. MACHINE FOR MAKING PAPER FOLDING BOXES AND THE LIKE. CHARLES BUTTERFIELD, Middletown, Ohio, assignor to The Interstate Folding Box Company, Middletown, Ohio. Filed Mar. 23, 1922. Serial No. 546,044. 24 Claims. (Cl. 93—49.)

1. A machine of the character described, including in combination, a paper blank feeding mechanism, and a series of folding mechanisms arranged in units to effect successive folding operations on the blanks as the same are delivered from the blank feeding mechanism, and including means to move the blanks from one unit to another of said mechanism, one of said units comprising coacting rollers timed to receive the blanks singly from said feeding mechanism, and having a coacting projection and depression thereon respectively to effect the initial fold on an edge of each blank.

1,461,967. PROCESS FOR MAKING PAPER FOLDING BOXES OR THE LIKE. CHARLES BUTTERFIELD, Middletown, Ohio, assignor to The Interstate Folding Box Company, Middletown, Ohio. Filed Mar. 23, 1922. Serial No. 546,045. 9 Claims. (Cl. 93—49.)

1. The herein described process of making paper folding boxes, consisting in preparing blanks of uniform size, in feeding the blanks progressively to a box making apparatus, in causing the blanks to be moved without pause through said apparatus, in effecting successively folding of the front and rear edges of each blank, and subsequently thereto in effecting simultaneously folding of the opposite side edges of each blank, as the same are advanced through said apparatus, in causing adhesive junctures to be made between folded portions of each blank, and in causing the blanks to be delivered singly from said apparatus in knocked-down form.

1,461,968. AIR BRAKE FOR TRAINS. EDWARD M. CAVANAGH and ROBERT E. MCFARLANE, Ottawa, Ontario, Canada. Filed Feb. 7, 1922. Serial No. 534,807. Claim. (Cl. 303—77.)

In combination with a railway air brake system, pressure operated retainers, pipe connections between the triple valve and controlling valve, pipe connections between the auxiliary cylinder and said controlling valve, pipe connection between said controlling valve and the regular train pipe line, said controlling valve consisting of a head, cylinders formed in each end of said head, pistons reciprocally positioned in said cylinders, a connecting piston rod between said pistons, an air chamber between said cylinders, an intake opening from the first said pipe connection, an exhaust opening from said air chamber, a valve member carried by said piston rod to control said intake opening, said valve member consisting of a tapered block adapted to normally seat upon the beveled end of the pipe and to close the first said pipe connection and to be controlled by relative pressure of the air in the other said pipe connections on said pistons.

1,461,969. SHOCK-ABSORBING DISK WHEEL. GABRIEL A. CHEREMISNOFF, Highland Park, Mich. Filed Feb. 23, 1923. Serial No. 620,768. 5 Claims. (Cl. 152—45.)

3. A shock absorbing disk wheel comprising a driving hub having a series of lugs formed integrally therewith and extending radially therefrom, a steel spring extending about and between the lugs of the hub, a driven disk provided with a central aperture for the hub and a series

of notches opening therinto for receiving the lugs of the hub and the steel spring, the said disk being provided with a peripheral flange and with a flange about the said notches adapted to be engaged by the spring, a pair of outer disks engaging the opposite sides of the driven disk

between the flanges, means for varying the tension between the outer and driven disks and a flexible tire portion adapted to engage the peripheral flange of the driven disk on the lower side when a weight is placed on the wheel.

1,461,970. CARBURETOR. DON COLE and CHARLES J. GUSTAFSON, Chicago, Ill., assignors to Stromberg Motor Devices Company, Chicago, Ill., a Corporation of Illinois. Filed June 19, 1914, Serial No. 845,999. Renewed Oct. 16, 1922. Serial No. 594,901. 2 Claims. (Cl. 261—48.)

1. In a carburetor, an automatic air valve, a fuel nozzle moving therewith, a valve for said fuel nozzle, means for adjusting the normal position of said valve, and temporary adjusting means for increasing the tension on said air valve and for raising said fuel valve later in the adjusting movement.

1,461,971. HAND-STAMP-ASSEMBLING MACHINE. GEORGE H. COLE, Wenona, Ill. Filed Oct. 4, 1920. Serial No. 414,490. 6 Claims. (Cl. 276—20.)

1. In a machine of the character described, in combination, a type magazine divided into a plurality of vertically arranged type containing compartments, a key-board, a plurality of keys associated with said board, one for each compartment, tripping means operable in each compart-

ment to control the release of the type from said compartments, operating connections between said tripping

means and said keys, a spacer bar, and means actuated by said spacer bar for moving the type discharged from the magazine to assembled position

1,461,972. INVISIBLE BAGGAGE GUARD FOR MOTOR CARS. THOMAS DAINES, Penticton, British Columbia, Canada. Filed Aug. 1, 1921. Serial No. 489,102. 1 Claim. (Cl. 224-29.)

The combination with the running board of an automobile, of longitudinally slotted members on the underside of said running board, a rod extended in the direction of the length of the running board and guided in said slots, a front board parallel with the running board, a secondary member on the inner face thereof, crossed strap members connected to said rod and secondary member, straps secured to said front board and having means at their ends for detachable connection with means on the automobile body, and interengaging means on the front board and slotted members for keeping the parts in closed position.

1,461,973. CULVERT MOLD. THOMAS DE LA MARE, Tooele, Utah. Filed Mar. 11, 1921. Serial No. 451,426. 9 Claims. (Cl. 25-131.5.)

1. A culvert mold comprising oppositely disposed trough-shaped main members each including a bottom, a side wall and a top; means for bridging the space between the tops of the main members; and braces pivoted to the tops of the main members and engaged detachably with the bottoms of the main members.

1,461,974. BREAD PAN. CLARA DRIVER, Thessalon, Ontario, Canada. Filed Feb. 7, 1922. Serial No. 534,828. 2 Claims. (Cl. 53-6.)

1. A bread pan having imperforate ends, and strips slidable through said ends with their lower portions on the outside of the pan and their upper portions disposed inside the pan to extend above the upper edge thereof to prevent the bread from rising over the ends of the pan.

1,461,975. SLIDE RULE. WILFRED B. EATON and THOMAS D. LAMAY, Seattle, Wash. Filed Apr. 22, 1921. Serial No. 463,528. 2 Claims. (Cl. 235-70.)

1. In combination, a base provided with a reduced portion at one end and a groove extending longitudinally thereof and terminating at the reduced portion, the bottom of said groove being co-planar with the surface of said reduced portion, and a slide mounted in said groove and movable over said reduced portion.

1,461,976. CHILD'S MAILCAR AND LIKE VEHICLE. JAMES GEORGE EVANS, Tunbridge Wells, England. Filed Feb. 21, 1921. Serial No. 446,855. 5 Claims. (Cl. 280-47.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a children's mail cart, in combination, two separate lateral and vertically disposed tubular metal frame members, said frame members each forming a closed figure, two transversely disposed axles respectively connected near the opposite ends to the lower parts of the said frame members, a seat, and means for carrying the seat from and between the upper parts of the said frame members, substantially as described.

1,461,977. ORE REDUCTION. SYDNEY EDWARD THACKER EWING and JOSEPH LEONARD WILLEY, Johannesburg, Transvaal, South Africa. Filed Aug. 30, 1922. Serial No. 585,291. 8 Claims. (Cl. 83-9.)

1. The improvement in the art of tube-milling ore which consists in supplying to the tube mill, as the regu-

lar mill feed, ore in large and angular fragments, withdrawing from the tube mill fragments of said feed material which have become rounded, breaking them, and returning the breaker product to the tube mill.

1,461,978. VEHICLE WHEEL. JOHN G. FEIL, Blackstone, Va. Filed Aug. 24, 1922. Serial No. 584,066. 12 Claims. (Cl. 152-30.)

1. In a wheel of the character specified, a tubular spoke member, a companion spoke member telescoping therewith, a sleeve threaded on the telescoping spoke member and disposed within the tubular spoke member, a band clamped about the tubular spoke member and having a projection passing through an opening in a side thereof and engaging said sleeve to prevent turning thereof, means insertable through registering openings formed in said band and tubular spoke member to engage said sleeve and the spoke member upon which it is mounted to prevent turning thereof, said means having longitudinal play in the sleeve, and an expansible helical spring within the tubular spoke member and engaging the said sleeve and adapted to have its effective tension regulated thereby.

1,461,979. CONVERTIBLE SINK AND WASHING DEVICE. CHARLES B. FOSTER, Buffalo, N. Y. Filed Dec. 8, 1917. Serial No. 206,291. 3 Claims. (Cl. 141-9.)

1. In a washing machine, a washing receptacle, a well depending therefrom and opening into said receptacle, water raising means pivotally mounted within said well to turn about a vertical axis, a motor, said water raising means comprising a vertical shaft connected with said motor, a helical blade fixed around said shaft to be within said well, a plurality of fan blades fixed to said shaft above said helical blade, a tubular casing open at the top and bottom within said well and spaced from the

bottom thereof and positioned therein to be between the wall of said well and said blades, permitting said blades to revolve therein, whereby water passes down between said wall and said casing and up within said casing, and means for stopping vortex currents within said well.

1,461,980. AUTOMATIC TELEPHONE SYSTEM. MARTIN L. NELSON, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed June 30, 1919, Serial No. 307,561. Renewed Nov. 2, 1922. Serial No. 598,647. 45 Claims. (Cl. 179-17.)

31. In a party line telephone system, an automatic connector switch for completing connections to called lines, and code ringing mechanism associated with said connector comprising two step by step switches having their banks permanently wired together.

1,461,981. MEANS OF SINGLE-ARTICLE DELIVERY FROM CONTAINERS. WILLIAM SYLVESTER NEWMAN, Alexandra, Victoria, Australia. Filed Nov. 1, 1921. Serial No. 512,113. 4 Claims. (Cl. 206-23.)

1. A device as described comprising a container having a chamber with a reciprocating inclined base, and a slide in the container adapted to receive articles from the inclined base and acting to shift the base in one direction.

1,461,982. CLOTHESPIN. LOUIS N. OSWALD, Orleans, Nebr. Filed Jan. 10, 1922. Serial No. 528,241. 3 Claims. (Cl. 24-139.)

1. A clothes pin constructed from a single continuous piece of wire having one end bent to form a horizontal

keeper frame with longer and shorter parallel loops and its remaining portion bent to form a V-shaped body portion, the lower end of one leg of which is free and adapted to engage either of the loops of said frame.

- 1,461,983. COVER REMOVER. FRED J. PARKER, Moose Jaw, Saskatchewan, Canada, assignor of two-fifths to Thomas Ferguson Acheson, Yorkton, Saskatchewan, Canada. Filed Mar. 16, 1922. Serial No. 544,340. 1 Claim. (Cl. 81—3.1.)

The improved cover remover described, comprising two semi-circular plates, and a spring forming a hinge pin hingedly connecting said plates with its terminals oppositely extended so as to engage said plates and thereby serving as tensioning means, said plates being formed with vertical walls having ridges to provide gripping means adjacent the abutting edges of said walls.

- 1,461,984. TIRE CONSTRUCTION. FRED BROWN PFEIFFER, Akron, Ohio. Filed Oct. 17, 1921. Serial No. 508,233. 3 Claims. (Cl. 152—13.)

3. A tire casing embodying cords the body portions of which are extended in approximately parallel relation across the tread of the casing in planes in right angles to the axis of the casing, the ends of adjacent cords being crossed upon each other and being inclined, with respect to the body portions in opposite directions circumferentially of the casing, those ends which are inclined in one direction being parallel to each other, and those ends which are inclined in an opposite direction being parallel to each other.

- 1,461,985. GUIDE FOR GRINDING DEVICES. MICHAEL P. SCHMITT, North Chicago, Ill. Filed Nov. 3, 1921. Serial No. 512,449. 1 Claim. (Cl. 51—37.)

The combination with a grinding machine having a power driven grinding wheel, a clamp for holding a straight blade transverse to said grinding wheel, and means for moving said grinding wheel from one end of said blade to the other, of a rigid angle bar having an accurately fashioned flat surface thereon, a pair of clamping members for adjustably securing said bar to said machine adjacent and parallel to said blade, and an

adjustable finger associated with the support for said grinding wheel, said finger being adapted to rest on

said flat surface to cause said grinding wheel to be limited in its engagement with said blade uniformly throughout the grinding operation.

- 1,461,986. RESILIENT TIRE. CHARLES SCHNEIDER, Hackett, Ark. Filed Dec. 23, 1922. Serial No. 608,661. 4 Claims. (Cl. 152—28.)

1. In a spring wheel, a hub, spokes radiating from the hub, a felloe connecting the spokes, a rim including spaced side members having inwardly extended flanges engaging the felloe, a resilient felloe supporting member positioned within the rim, said felloe supporting member comprising spaced spring members, and spring members connecting the rim and spokes.

- 1,461,987. STUMP SOCK. NORMAN H. SMITH, Ottawa, Ontario, Canada. Filed Dec. 28, 1921. Serial No. 525,507. 1 Claim. (Cl. 3—3.)

A stump sock consisting of a leg portion of seamless pliable material of tapered form, the lower end of which is open, and spaced strips crossed and attached to the lower end of the leg portion so that the stump sock may be comfortably pulled down after being positioned in the artificial limb.

1,461,988. PANTOGRAPH. RICHARD B. SPIKES, San Francisco, Calif., assignor to S. D. S. Experimental Laboratories Company, San Francisco, Calif., a Corporation of California. Filed Nov. 27, 1922. Serial No. 603,679. 9 Claims. (Cl. 191-67.)

1. A self-adjusting contact-maintaining device for an electric car having a wire suspended thereover, comprising a plurality of frames linked together to substantially form a parallelogram adapted to be secured to the top of the car so as to touch the wire, spring means and pressure means co-operating in affecting the height of the parallelogram in opposite senses, a valve control for the pressure means and means actuated by the tension of the wire controlling the valve so as to adjust the height of the parallelogram to the height of the wire.

1,461,989. POULTRY COOP. CHARLES E. STOCKHAM, Oskaloosa, Iowa. Filed July 26, 1922. Serial No. 577,560. 5 Claims. (Cl. 220-18.)

1. A poultry coop of the class described including a coop member having a top, a bottom and side walls, floor members hinged mounted in said coop, said floor members being so arranged that when they are in one position they collectively cover the bottom of the coop and when in another position each floor member extends from the bottom to the top for forming a coop having more than one deck.

1,461,990. HYDROCARBON MOTOR. JESSE G. VINCENT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 22, 1915. Serial No. 62,796. 5 Claims. (Cl. 125-55.)

1. In a multi-cylinder hydrocarbon motor, in combination, a motor base, cylinder blocks in V arrangement thereon, and valves for the cylinders also in V arrangement but at a slightly greater acute angle to each other than the cylinders.

3. In a hydrocarbon motor, in combination, a supporting base, a pair of cylinder blocks disposed in V relation, each block having a plurality of cylinders with their valves on adjacent sides of the blocks and with

intake conduits formed in the adjacent side walls of the blocks and extending to all of the cylinders of each block, a carbureter arranged between the blocks, and a con-

duit of arched form communicating with said carbureter and the first mentioned conduits and detachably secured to said blocks.

1,461,991. SIDING TIGHTENER. FRED WALKER, Neepawa, Manitoba, Canada. Filed Aug. 24, 1921. Serial No. 494,776. 1 Claim. (Cl. 254-11.)

Tighteners consisting of gripping members, handles attached to said gripping members, said gripping members hinged together, one of said gripping members being provided with a bifurcated end portion so formed as to receive and embrace the tongue portion of the tongue and groove member without injuring the said tongue, one of said gripping members adapted to engage the face of a tongue and grooved board for tightening the same against the previously laid board and the other of said gripping members adapted to engage in any suitable support either above or below the board to be acted upon so that pressure can be exerted to tighten said boards together.

1,461,992. DISPENSING APPARATUS. HENRY L. WEBER, Louisville, Ky. Filed June 27, 1921. Serial No. 480,752. 6 Claims. (Cl. 221-67.)

1. In a dispensing station for fluids lighter than water, a tank, a float therein heavier than the fluid to be dis-

pensed but buoyant on water, a member operated by the float, a dispensing valve adapted to be closed when the float is in one position, a water admission valve controlling water delivered to the tank, a water discharge valve

in communication with the tank, and means for operating the valve alternately for closing and opening the same, and means whereby the movement of the valve actuates said valve operating means.

1,461,993. WHIP HOLDER. HERBERT WILKINSON, Em press, Alberta, Canada. Filed May 16, 1922. Serial No. 561,483. 3 Claims. (Cl. 280—178.)

1. A whip holder comprising a whip carrying socket having a reduced extended end portion, a base plate, means carried by said base plate and said socket to mount the whip socket for swinging movement in one direction and limited movement at right angles thereto, means for clamping a whip butt within said socket, means for returning said socket to normal position and means cooperating with said reduced end portion to limit the return movement of said socket.

1,461,994. METAL POLE CONSTRUCTION. ARTHUR W. WRIGHT and BENJAMIN F. IBACH, Pottsville, Pa. Filed Apr. 18, 1922. Serial No. 554,875. 9 Claims. (Cl. 189—24.)

1. A metal post of the class described comprising a plurality of uprights each having a series of reverse bends to form a zig-zag upright, the several uprights being ar-

ranged with the adjacent uprights having their portions between the succeeding bends alternately converging and

diverging but not crossing, and a plurality of horizontal braces spaced along said uprights, the horizontal braces being connected to the uprights.

1,461,995. BATTERY CARRIER. WALTER W. YOUNG, Parker, S. Dak. Filed June 2, 1922. Serial No. 565,425. 3 Claims. (Cl. 224—45.)

1. In a battery carrier, a handle, a clip on each end thereof, a bail for each clip, each of said bails comprising a strip of material having a depending looped portion, a sleeve in each clip into which the upper ends of the material are inserted, the said sleeve being rotatable in the clips of the handle, and battery engaging devices supported by the bails.

1,461,996. ELECTRIC STARTER. CHRISTOPHER CARTER ANDERSEN, Salt Lake City, Utah. Filed May 3, 1922. Serial No. 558,259. 1 Claim. (Cl. 290—38.)

In combination with the toothed fly wheel of an internal combustion engine, a starting device including a motor, having a shaft, a pinion supported on the shaft to move therewith, means for moving the motor and its shaft to cause the pinion to mesh with the teeth of the fly wheel, a contact member carried by the motor, a stationary contact member lying in the path of travel of the motor when the motor is being moved to its active

position, a coiled spring secured to the stationary contact member and extending therefrom to contact with the contact member carried by the motor, and complete

the circuit to the motor to cause the operation of the motor, and means for automatically returning the motor to its inactive position.

1,461,997. TRACTOR. WILLIAM A. ARMSTRONG, Waco, Tex., assignor to Armstrong Farm Tractor Company, Dallas, Tex. Filed Jan. 22, 1921. Serial No. 439,215. 2 Claims. (Cl. 180—54.)

1. In a tractor, a motor, a housing comprising an integral body portion arranged below and projecting rearwardly from the motor and formed with integral transverse and longitudinal partitions providing a series of opposed transverse compartments and a longitudinal compartment at each side of the rear transverse compartment, a driven shaft operated from said motor and journaled in the plurality of transverse partitions and extending through a series of transverse compartments, a clutching device within one of said transverse compartments and cooperating with said shaft for coupling it with the motor, transmission and reverse drive mechanisms mounted in said transverse compartments forwardly of the rear transverse compartment, a differential mechanism mounted in the rear transverse compartment, a brake device arranged in each longitudinal compartment, axle sections extending through said differential mechanism, and removable cover elements for said body portion.

1,461,998. PUMP, COMPRESSOR, AND MOTOR. JOSEPH BAUDOT, Paris, France. Filed Dec. 28, 1921. Serial No. 525,333. 4 Claims. (Cl. 103—138.)

1. A rotary fluid pump, compressor, or motor comprising a jacketed casing with inlet and outlet ports, a shaft centrally mounted in said casing, a drum eccentrically

mounted in the casing, and rotatable therein, said drum being provided with peripheral guide slots, a bearing member having an opening for engagement over the shaft, oppositely disposed blades mounted on said bearing mem-

ber, said blades being arranged radially in the drum, said bearing member having guide surfaces thereon, and a driving member keyed to the shaft for producing a radial movement of the blades and for turning the drum through the medium of the blades.

1,461,999. OVEN. JOHN H. BEEBY, Ottawa, Ontario, Canada. Filed Dec. 28, 1921. Serial No. 525,533. 6 Claims. (Cl. 126—39.)

6. A heat retaining oven constituting an insulated base having a burner chamber, an insulated top, insulated walls, an insulated door, means for reinforcing the said base, a gas burner for the said oven and an air chamber over the burner chamber.

1,462,000. SPLINT. ALEXANDER M. BENNETT, Bellaire, Mich., assignor to Frank Bennett, Pontiac, Mich. Filed Nov. 8, 1922. Serial No. 599,697. 1 Claim. (Cl. 128—79.)

A splint of the character described including a transversely rounded shank having a base or enlargement at one end, the other end being rounded transversely, there being a passage in the base end portion of the shank and grooves in the sides of the shank near the other end thereof, said shank having a flat face throughout its length formed with a longitudinal groove merging into the passage and spaced openings extending to the side

grooves, and an attaching cord threaded through the openings, grooves and passage and providing an intermediate attaching loop extending from the flat face of the shank and free ends extending from the base.

1,462,001. SICKLE HANGER. CARL BENSON, Youman, Colo. Filed Feb. 14, 1922. Serial No. 536,571. 1 Claim. (Cl. 51—223.)

In a sickle-hanger, the combination of an overhead rail, separate double pulleys free on the rail, a sickle holding cable on the pulleys, a counter-weight suspended on the cable, between the double pulleys, the said weight to counter-balance the weight of the sickle; the said double-pulleys being free to move on a railing, substantially as shown and described.

1,462,002. SAFETY CRANK. IVOR CHARLES BICE Claudeboye, Ontario, Canada. Filed June 23, 1921. Serial No. 479,914. 1 Claim. (Cl. 123—185.)

A safety cranking device for automobile engines, comprising, in combination, a hand crank fixedly attached to a stub starting shaft; a ratchet wheel fixed thereon; dog means preventing backward rotation of said stub shaft; a slotted box-like member oscillatable on said stub shaft; a pin fixed in said stub shaft projecting through the slots of said box-like member; a pair of inter-engaging pawl members pivoted on said box-like member, spring-held in operative relation thereto; engaging means at the forward end of said box-like member to engage similar means on the end of the crank shaft of the engine, spring means for withdrawing said box-like member from said engine crank shaft, said pin cooperating with said pair of pawl members to release said box-like member from engagement with said engine crank shaft on a retrograde movement of the engine crank shaft.

1,462,003. IMPERVIOUS MATERIAL AND PROCESS FOR ITS PRODUCTION. WARREN F. BLECKER, Boulder, Colo. Filed Mar. 3, 1922. Serial No. 540,899. 12 Claims. (Cl. 91—70.)

6. The process of rendering artificial graphite impervious, consisting in coating its surface with a carbonaceous substance, and removing the volatile constituents thereof by evaporation.

7. The process of rendering artificial graphite impervious, consisting in coating its surface with pitch, and subjecting the coated graphite to the influence of heat.

8. A new article of manufacture, consisting of artificial graphite, the voids of which are closed at the surface, by solid hydrocarbonaceous matter.

1,462,004. FLYTRAP. FRANK B. CAREY, Fresno, Calif. Filed Aug. 21, 1922. Serial No. 583,244. 4 Claims. (Cl. 43—118.)

2. A trap comprising a pan having stepped bait retaining depressions and a central concave seat, a reticulated cage supported by the pan and a bowl-shaped bottom in the cage and resting in the seat, said bottom being provided with entrance openings adjacent its upper edge, the side walls of the pan being also provided with openings.

1,462,005. ADJUSTABLE RECLINING CHAIR. FRANK P. HALL, Mont Alto, Pa. Filed Apr. 29, 1922. Serial No. 557,399. 3 Claims. (Cl. 155—117.)

1. A chair of the class described comprising a frame forming front legs, a second frame forming rear legs, means for clamping said frames together in adjustable longitudinal and angular positions in relation to each other, said means including bolts through said frames, cross-connected arms on said bolts, and a hinged support on said front leg frame adapted to selectively engage with notches provided in said rear leg frame, a canvas stretched between said frames, one end of said canvas being rigidly-secured to said cross-connected arms.

1,462,006. MECHANICAL ORCHESTRA. GEORGE WILLIAM HALL, Topeka, Kans. Filed June 18, 1921. Serial No. 478,734. 1 Claim. (Cl. 46—40.)

The combination with a platform and a figure thereon simulating an orchestra performer, of a tube extending from the mouth portion of the figure, a U-shaped tube slidable thereon, a stationary tube slidably engaged by the U-shaped tube, a jointed member upon the figure

simulating an arm and connected at one end to the U-shaped tube, a flexible reciprocating element connected to the U-shaped tube and slidable within the tube extending from the mouth portion, a guide tube extending down-

wardly within the figure and through which the flexible reciprocating element extends, a cam mounted for rotation, means on the flexible element for engaging the cam, and a spring for holding said means pressed against the cam, and means for rotating the cam to reciprocate the flexible element and U-shaped tubular member

1,462,007. TRAP. LESLIE FOREST HARDESTY, Terra Alta, W. Va. Filed Mar. 24, 1923. Serial No. 627,494. 3 Claims. (Cl. 182-12.)

1. In a trap, a pipe having an opening formed with a tapered wall, lugs forming a part of the pipe and disposed adjacent to the tapered wall, a removable housing supported on the pipe, means for securing the housing to the pipe, a removable pipe within the housing, and a cover formed integral with the pipe to move therewith.

1,462,008. FRUIT PICKER. THEODORE F. HENNINGER, Memphis, Tenn. Filed Apr. 1, 1922. Serial No. 548,731. 2 Claims. (Cl. 56-334.)

1. In a fruit picker, the combination with a supporting pole, coating jaws carried by the outer end portion of

the pole, a tube secured to one of the jaws and leading therefrom, means for securing the tube to the pole, a spring interposed between and connected to the pole and tube, the spring serving to absorb the shock of the fruit dropping within the tube and to retard the progress of the fruit through the tube.

1,462,009. CORNER STAY FOR BOXES. EDWARD G. HIGGINSON, Providence, R. I. Filed July 12, 1921. Serial No. 484,118. 3 Claims. (Cl. 229-35.)

1. In a box, a pair of walls, an outwardly extending locking wing formed on one of the walls, the other wall having an angular locking slot formed therein and a pair of parallel arranged slots disposed intermediate the transverse edge of the wall and the locking slot, these slots being arranged to receive the locking wing.

1,462,010. SAFETY APPLIANCE FOR RAILWAY SWITCHES. BENTLEY R. HOOKS, Amarillo, Tex. Filed Nov. 14, 1922. Serial No. 600,868. 5 Claims. (Cl. 246-435.)

1. A device of the character described comprising a plate adapted to be clamped to the web of a rail in front of the switch point of a switch, and having a cam member extending longitudinally of the plate with the cam member gradually increasing in thickness from its opposite ends toward its middle portion to form a lateral projection for causing a lateral shifting of the wheels of a train away from the switch point of a switch which is adapted to lie in contiguous relation with the rail.

1,462,011. COMBINATION WOVEN-WIRE STRETCHER AND HOIST. IRA HUTCHERSON, Keokuk, Iowa. Filed Mar. 20, 1922. Serial No. 545,111. 1 Claim. (Cl. 254-169.)

In a device of the class described, a pair of brackets, each having a pair of openings, a supporting rod received in one of the openings of each bracket, pins extended through the brackets and through the rod for fixing the brackets thereon and supporting them in spaced relation, said brackets having a pair of spaced ears thereon, a sec-

ond rod journalled in the other openings in said brackets, a crank on said second rod, a combined worm wheel and cable drum journalled between said ears on each of said brackets, worms spaced from each other fixed to said second rod and arranged to mesh with the combined worm wheels and cable drums, said combined worm wheels and cable drums including a pair of similar members having tubular cable receiving portions and flanges provided with teeth on their adjacent faces for forming the worm wheels.

1,462,012. RADIATOR THERMOSTAT. ABRAHAM ISAAC KAPLON, Brunswick, Md. Filed July 2, 1920. Serial No. 393,680. 2 Claims. (Cl. 177—311.)

1. A radiator thermostat comprising a body, a thermometer tube containing mercury mounted on the body, a battery barrel mounted outside of the body adjacent to the base of said tube, an incandescent lamp mounted on the body at the head of the tube, a hood carried by the body and disposed over the lamp to reflect light upon the tube and reveal the position of the mercury, an electrical circuit embracing contacts in the tube, a battery in said barrel and the aforesaid lamp, said mercury being adapted to rise to bridge the contacts and close said circuit; and push button contacts situated on top of the body enabling closing the circuit independently of said mercury and adapting the thermostat to the use of a portable flashlight.

1,462,013. ELECTRIC SAFETY FUSE. SVEND JOHANNES KNUDSEN, Copenhagen, Denmark. Filed Apr. 30, 1921. Serial No. 465,665. 4 Claims. (Cl. 200—125.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A multiple-fuse plug, comprising a top member provided with a central cavity and with an annular series of vertical fuse holes encircling the same and opening at their opposite ends through the corresponding end faces of said member; a series of contact studs on the inner end of said member at the inner ends of said holes; a disc in said cavity; a plurality of bent fuse-wires having their inner branches disposed in said cavity and connected at their free ends to said disc and their outer branches disposed in said holes and connected at their free ends to said studs, the central portions of said wires extending laterally across the outer end face of said member; a bottom member; a spindle passing axially through the top and bottom members to connect them together and to which said top and bottom members are rotatably and rigidly related, respectively; a contact sleeve on the bot-

tom member having an extension to interchangeably engage said studs; and coating sets of teeth on the confronting inner ends of said members having inclined faces for sliding engagement with each other during the rotation of the top member relative to the bottom member, said teeth being so disposed with relation to the contact studs that one stud will be held in correct contact position whenever the sets of teeth come into full engagement.

1,462,014. APPARATUS FOR SPOOLING WIRE. JOSEPH M. LEIDECKER and JULIUS G. BURCH, Bartlesville, Okla. Filed Sept. 18, 1922. Serial No. 588,872. 6 Claims. (Cl. 242—68.)

1. In an apparatus for winding wire, a supporting shaft, a spool through which the shaft passes, sleeves threaded upon the opposite ends of the shaft and having means extending into and clamping against the heads of the spool, thereby mounting the spool upon the shaft, said sleeves having cylindrical members adapted for mounting in suitable bearings, whereby the spool may be rotatably supported.

1,462,015. CAR-CHECK HOLDER. ROY CLIFFORD LEITCH, Kansas City, Mo. Filed Aug. 26, 1920. Serial No. 406,057. 4 Claims. (Cl. 40—16.)

1. In a device of the character described, the combination of a recessed holder, and a resilient check within said recess and bowed by engagement at its side edges with and exerting pressure against the opposite walls of said recess.

1,462,016. UNIVERSAL JOINT AND POWER TRANSMISSION. EDDIE ALLEN LEWIS, Belleville, Kans. Filed Mar. 17, 1921. Serial No. 453,048. 14 Claims. (Cl. 192—67.)

3. In combination with an engine shaft, a driving shaft and a universal joint between said shafts, said universal joint including a female element having a clutch face, and adapted to receive said driving shaft, a shiftable clutch element on said driving shaft, a clutch shifter, means at a distant place for operating said shifter and means to hold said shifter with the clutch released.

1,462,017. DIVIDING-BOARD REGULATOR. WILLIAM A. MARTIN, Wellington, Colo. Filed Dec. 2, 1921. Serial No. 519,482. 3 Claims. (Cl. 56—314.)

1. The combination with the division board and outer shoe of a mowing machine, of an adjusting device comprising a plate secured upon the division board and projecting beyond the forward end thereof, and an adjustable element carried by the projecting end of the plate and engaging beneath a projection on the shoe for effecting desired adjustment.

1,462,018. HEATING FURNACE. HENRY W. MASON, New Bedford, Mass. Filed Mar. 26, 1923. Serial No. 627,654. 10 Claims. (Cl. 126—67.)

5. In a heating furnace, a body having opposed series of hollow lateral fluid-receiving sections, the sections of the two series being relatively staggered, said sections each having upper and lower chambers communicating at their inner ends and the body having series of spaced vertical conduits with the adjacent ends of adjacent conduits communicating with the respective chambers of the sections.

1,462,019. FILM-DEVELOPING APPARATUS. HENRY C. FRANK MORANT, Hawthorn, Victoria, Australia. Filed July 12, 1921. Serial No. 484,182. 2 Claims. (Cl. 95—90.5.)

1. In film developing apparatus, a container, and removable frame in the container provided at each end

with a plurality of rollers around which the film is drawn in circuitous folds, said frame comprising two sides and a base, one side being movable laterally.

1,462,020. SPRAY NOZZLE. JOHN D. MURRAY, San Francisco, Calif. Filed Oct. 10, 1921. Serial No. 506,716. 3 Claims. (Cl. 299—140.)

1. A spray nozzle comprising an inlet port for gas and a control valve therein, an outwardly flaring conical throat forming a continuation of said port, a liquid inlet opening into said throat in a direction at right angles to the axis thereof, and a globular valve controlling said liquid inlet and mounted for movement transversely through said throat, whereby the liquid and gas are ejected from said throat when pressure is applied behind said liquid and said gas, a discharge nozzle tip for said throat comprising an orifice and controlling means for said orifice adapted to vary the discharge from said orifice.

1,462,021. DUST CAP OR THE LIKE. EUGENE V. MYERS, East Orange, N. J., assignor to A. Schrader's Son, Incorporated, Brooklyn, N. Y., a Corporation of New York. Filed July 25, 1919, Serial No. 313,146. Renewed Sept. 21, 1922. Serial No. 589,683. 7 Claims. (Cl. 152—12.)

1. A dust cap for tire valves or the like comprising a cap portion having a series of spring arms, an integral lower ring portion, and a cover surrounding said spring arms.

1,462,022. CULTIVATOR ATTACHMENT FOR TRACTORS. SAMUEL I. NEHER, Keystone, Ind. Filed July 29, 1921. Serial No. 488,426. 8 Claims. (Cl. 97-50.)

1. The combination with a tractor having an extension frame supported from the ground of a second frame carried by the extension frame, shafts mounted on the second frame, cultivating attachments connected to said shafts, means for employing power from the driving means of the tractor for moving said shafts for changing the positions of the cultivating members, and additional means operated by the driving means of the tractor for elevating the cultivator attachments.

1,462,023. OIL-SHALE RETORT. WILLIAM M. STRONG, San Francisco, Calif. Filed July 20, 1920. Serial No. 397,774. 9 Claims. (Cl. 196-19.)

1. In an apparatus of the character described a housing having a distilling chamber formed therein, a main inlet and outlet opening formed in the housing, a second inlet and outlet opening formed within the housing and communicating with the distilling chamber and the first named inlet and outlet openings, a furnace chamber formed in the housing below the distilling chamber, and ducts formed in the housing for maintaining a flow of furnace gases past said second named inlet and outlet openings to exclude air from the distilling chamber and to prevent oxidization of the products of distillation.

1,462,024. COMBINATION DISPLAY AND VENDING DEVICE. GEORGE F. BAITZ, Philadelphia, Pa. Filed May 12, 1921. Serial No. 468,850. 8 Claims. (Cl. 211-20.)

2. A device of the character described including a wheel; partitions spaced apart and projecting from the

rim of the wheel, said partitions having parts cut out so as to embrace said rim; and means interposed be-

tween said partitions whereby inner and outer channels are provided.

1,462,025. DRYING APPARATUS. HARRY BENTZ, Montclair, N. J. Filed Apr. 11, 1921. Serial No. 460,177. 7 Claims. (Cl. 34-47.)

7. A drying apparatus comprising a substantially horizontal tunnel, means for forcing heated air through said tunnel, trucks carrying tiers of trays in said tunnel, said trays being adapted to hold material to be dried and having perforate bottoms, and means whereby said air current has relatively easy ingress into and relatively difficult egress from alternate inter-tray spaces in a given tier of trays and whereby said air current has relatively difficult ingress into and relatively easy egress from the intertray spaces intermediate said alternate spaces.

1,462,026. PROTECTIVE DEVICE. WILLIAM T. BOOTH, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 3, 1917. Serial No. 200,071. 2 Claims. (Cl. 247-7.)

1. A protective device comprising a casing, means for mounting said casing upon a suitable support, a removable plate having a wide flange adapted to fit into

and engage the inner wall of said casing, a protective element mounted upon said plate and adapted to project

within and be held clear of said casing when said plate is in position, and an aperture in said removable plate for the passage of connecting wires.

1,462,027. HYDROCYCLE. FRANK BRADY, Denver, Colo. Filed Aug. 9, 1921. Serial No. 490,938. 1 Claim. (Cl. 115—28.)
